

12.3: Teamwork in the Workplace

Learning Objectives

1. What is a team, and what makes a team effective?

Teamwork has never been more important in organizations than it is today. Whether you work in a manufacturing environment and utilize self-directed work teams, or if you work in the “knowledge economy” and derive benefits from collaboration within a team structure, you are harnessing the power of a team.

A team, according to Katzenbach and Smith in their *Harvard Business Review* (HBR) article “The Discipline of Teams,” is defined as “people organized to function cooperatively as a group” (Katzenbach & Smith, 2023). The five elements that make teams function are:

- Common commitment and purpose
- Specific performance goals
- Complementary skills
- Commitment to how the work gets done
- Mutual accountability

A team has a specific purpose that it delivers on, has shared leadership roles, and has both individual and mutual accountabilities. Teams discuss, make decisions, and perform real work together, and they measure their performance by assessing their collective work products. Wisdom of Teams reference. This is very different from the classic working group in an organization (usually organized by functional area) in which there is a focused leader, individual accountabilities and work products, and a group purpose that is the same as the broader organizational mission. Think of the finance organization or a particular business unit in your company—these are, in effect, larger working groups that take on a piece of the broader organizational mission. They are organized under a leader, and their effectiveness is measured by the unit's influence on others within the business (e.g., financial performance of the business.)

So, what makes a team truly effective? According to Katzenbach and Smith’s “Discipline of Teams,” the authors have observed several practices in successful teams:

Establish urgency, demanding performance standards, and direction. Teams work best when they have a compelling reason for being, and it is thus more likely that the teams will be successful and live up to performance expectations. We’ve all seen the teams that are brought together to address an “important initiative” for the company, but without clear direction and a truly compelling reason to exist, the team will lose momentum and wither.

Select members for their skill and skill potential, not for their personality. This is not always as easy as it sounds for several reasons. First, most people would prefer to have those with good personalities and positive attitudes on their team to promote a pleasant work environment. This is fine, but make sure that those individuals have the skill sets needed (or the potential to acquire/learn) for their piece of the project. The second caveat here is that you don't always know what skills you need on a project until you really dig in and see what's going on. Spend some time upfront thinking about the purpose of the project and the anticipated deliverables you will be producing, and think through the specific types of skills you'll need on the team.

Pay particular attention to first meetings and actions. This is one way of saying that first impressions mean a lot—and it is just as important for teams as for individuals. Teams will interact with everyone from functional subject-matter experts all the way to senior leadership, and the team must look competent and be perceived as competent. Keeping an eye on your team's level of emotional intelligence is very important and will enhance your team's reputation and ability to navigate stakeholders within the organization.

Set some clear rules of behavior. I have been through many meetings and team situations in which we have rushed through “ground rules” because they seemed obvious—and everyone always came up with the same list. It is critical that the team takes the time upfront to capture their own rules of the road to keep the team in check. Rules that address areas such as attendance, discussion, confidentiality, project approach, and conflict are key to keeping team members aligned and engaged appropriately.

Set and seize upon a few immediate performance-oriented tasks and goals. What does this mean? Have some quick wins that make the team feel they're accomplishing something and working together well. This is very important to the team's confidence, as well as just getting into the practices of working as a team. Success in the larger tasks will come soon enough, as the larger tasks are really just a group of smaller tasks that fit together to produce a larger deliverable.

Challenge the group regularly with fresh facts and information. That is, continue to research and gather information to confirm or challenge what you know about your project. Don't assume that all the facts are static and that you received them at the beginning of the project. Often, you don't know what you don't know until you dig in. I think that the pace of change is so great in the world today that new information is always presenting itself and must be considered in the overall context of the project.

Spend lots of time together. Here's an obvious one that is often overlooked. People are so busy that they forget that an important part of the team process is spending time together, thinking together, and bonding. Time in person, time on the phone, time in meetings—all counts and helps build camaraderie and trust.

Exploit the power of positive feedback, recognition, and reward. Positive reinforcement is a motivator that will help the team members feel more comfortable contributing. It will also reinforce the behaviors and expectations that you're driving within the team. Although many extrinsic rewards can serve as motivators, a successful team begins to feel that its own success and performance is the most rewarding.

Collaboration is another key concept and method by which teams can work together successfully. Bringing together a team of experts from across the business would be a best practice in any situation. However, Gratton and Erickson (2007), in their article *Eight Ways to Build Collaborative Teams*, found that collaboration seems to decrease sharply when a team is working on complex project initiatives. Their study examined 55 larger teams and identified those with strong collaboration skills despite the level of complexity. There were eight success factors for having strong collaboration skills:

- “Signature” relationship practices
- Role models of collaboration among executives
- Establishment of a “gift” culture, in which managers mentor employees
- Training in relationship skills
- A sense of community
- Ambidextrous leaders—good at task and people leadership
- Good use of heritage relationships
- Role clarity and talk ambiguity

As teams grow in size and complexity, the standard practices that worked well with small teams in the past don't work anymore. Organizations need to think about how to make collaboration work and leverage the above best practices to build relationships and trust.

? Concept Check

1. What is the definition of a team?
2. Name some practices that can make a team more successful.
