

16.1.2: Academic Research Writing- What Is It?

Writing That Isn't "Research Writing"

Not all useful and valuable writing automatically involves research or can be called "academic research writing."

- **While poets, playwrights, and novelists frequently do research and base their writings on that research, what they produce doesn't constitute academic research writing.** The film *Shakespeare in Love* incorporated facts about Shakespeare's life and work to tell a touching, entertaining, and interesting story, but it was nonetheless a work of fiction since the writers, director, and actors clearly took liberties with the facts in order to tell their story. If you were writing a research project for a literature class which focuses on Shakespeare, you would not want to use *Shakespeare in Love* as evidence about how Shakespeare wrote his plays.
- **Essay exams are usually not a form of research writing.** When an instructor gives an essay exam, she usually is asking students to write about what they learned from the class readings, discussions, and lectures. While writing essay exams demand an understanding of the material, this isn't research writing because instructors aren't expecting students to do additional research on the topic.
- **All sorts of other kinds of writing we read and write all the time—letters, emails, journal entries, instructions, etc.—are not research writing.** Some writers include research in these and other forms of personal writing, and practicing some of these types of writing—particularly when you are trying to come up with an idea to write and research about in the first place—can be helpful in thinking through a research project. But when we set about to write a research project, most of us don't have these sorts of personal writing genres in mind.

So, what is "research writing"?

Research writing is writing that uses evidence (from journals, books, magazines, the Internet, experts, etc.) to persuade or inform an audience about a particular point.

Research writing exists in a variety of different forms. For example, academics, journalists, or other researchers write articles for journals or magazines; academics, professional writers and almost anyone create web pages that both use research to make some sort of point and that show readers how to find more research on a particular topic. All of these types of writing projects can be done by a single writer who seeks advice from others, or by a number of writers who collaborate on the project.

Academic research writing—the specific focus of *The Process of Research Writing* and the sort of writing project you will probably need to write in this class—is a form of research writing. How is academic research writing different from other kinds of writing that involve research? The goal of this textbook is to answer that question, and academic research projects come in a variety of shapes and forms. (In fact, you may have noticed that *The Process of Research Writing* purposefully avoids the term "research paper" since this is only one of the many ways in which it is possible to present academic research). But in brief, academic research writing projects are a bit different from other kinds of research writing projects in three significant ways:

- **Thesis: Academic research projects are organized around a point or a "thesis" that members of the intended audience would not accept as "common sense."** What an audience accepts as "common sense" depends a great deal on the audience, which is one of the many reasons why what "counts" as academic research varies from field to field. But audiences want to learn something new either by being informed about something they knew nothing about before or by reading a unique interpretation on the issue or the evidence.
- **Evidence: Academic research projects rely almost exclusively on evidence in order to support this point.** Academic research writers use evidence in order to convince their audiences that the point they are making is right. Of course, all writing uses other means of persuasion—appeals to emotion, to logic, to the credibility of the author, and so forth. But the readers of academic research writing projects are likely to be more persuaded by good evidence than by anything else. "Evidence," the information you use to support your point, includes readings you find in the library (journal and magazine articles, books, newspapers, and many other kinds of documents); materials from the Internet (web pages, information from databases, other Internet-based forums); and information you might be able to gather in other ways (interviews, field research, experiments, and so forth).
- **Citation: Academic research projects use a detailed citation process in order to demonstrate to their readers where the evidence that supports the writer's point came from.** Unlike most types of "non-academic" research writing, academic research writers provide their readers with a great deal of detail about where they found the evidence they are using to support their point. This process is called **citation**, or "citing" of evidence. It can sometimes seem intimidating and confusing to

writers new to the process of academic research writing, but it is really nothing more than explaining to your reader where your evidence came from.

Research Writing with Computers and the Internet

There are good reasons for writing with computers. To name just a few, computers help writers:

- **Revise more easily**, since you don't need to retype an entire draft;
- **Share their writing with others**, either electronically (on disk or via email) or in "hard copy" since the writer only needs to print additional copies;
- **Store and organize files**, since papers that might get lost or take up a lot of room can all fit onto a computer hard drive or a floppy diskette; and
- **Make correct and "nice looking" drafts** with the use of features like spelling and grammar checkers, and with design features that allow you to select different fonts and layouts.

Chances are, you already know these things.

If you are *not* using computers or the Internet in your academic research writing process, you need to try and learn more about the possibilities. It can be intimidating and time consuming to begin effectively using a computer, but there are few things that will be as rewarding for your academic writing career.
