

## 7.18: Putting It Together- Microsoft Excel Intermediate Skills

---

Now that you know some of the more advanced tools available in Excel, let us take a look at our opening list of possible questions and match those with an Excel function we just covered.

1. You want to see which month had your highest sales volume. *You could see this by sorting your data Z to A (largest to smallest number).*
2. You have a total clothing inventory but you want to know how many pants you have in stock. *You could see this using the COUNTIF function.*
3. You want to know how many months from last year you were under budget. *You could see this with the IF function, just like in our learning example.*
