

6.11: Managerial Decision Exercises

1. Imagine that you are a manager and that two of your employees are blaming one another for a recent project not going well. What factors would you consider in deciding whom to believe? Who else would you talk to before making a decision? What would you do to try to reduce the likelihood of this happening again?
2. You have been asked whether your organization should expand from selling its products only in North America to selling its products in Europe as well. What information would you want to collect? Who would you want to discuss the idea with before making a decision?
3. You have a colleague who decided the organization should pursue a new technology. Nine months into the project of transitioning to the new technology, based on new information you are convinced that the new technology is not going to work out as anticipated. In fact, you expect it to be a colossal failure. However, when you try to talk to your colleague about the issue, she won't listen to your arguments. She is adamant that this new technology is the correct direction for your organization. Why do you think she is so resistant to seeing reason? Given what you learned in this chapter, what could you do to persuade her?
4. Your manager has asked you to take the lead on a new and creative project. She has encouraged you to create your own team (from existing employees) to work with you on the project. What factors would you want to consider in deciding who should join your project team? What would you want to do as the team leader to increase the likelihood that the group will be successful?
5. Identify the logical flaw(s) in this argument:
 - We want to have effective leaders in this organization.
 - Taller individuals tend to be perceived as more leader-like.
 - Men are usually taller than women.
 - So, we should only hire men to be managers in our organization.
