

Index

A

absorption coefficient
11.3: The Response Function and Energy Absorption
Adiabatic Approximation
6: Adiabatic Approximation
Adiabatic Dynamics
6.4: Adiabatic and Nonadiabatic Dynamics
adiabatic surface
6.3: Diabatic and Adiabatic States
annihilation operators
1.3: Basic Quantum Mechanical Models
anticommutator
10.3: Quantum Time-Correlation Functions
avoided crossing
2.3: Two-Level Systems

B

Baker–Hausdorff relationship
1.4: Exponential Operators
2.2: Exponential Operators Again
bra vector
1.2: Matrix Mechanics

C

Classical Plane Electromagnetic Waves
7.2: Classical Light–Matter Interactions
coherences
5.1: Introduction to the Density Matrix
conical intersections
6.3: Diabatic and Adiabatic States
correlation functions
10.1: Definitions, Properties, and Examples of Correlation Functions
Coulomb gauge
7.2: Classical Light–Matter Interactions
7.6: Appendix - Review of Free Electromagnetic Field
coupled channel Hamiltonian
6.2: Nonadiabatic Effects
creation operators
1.3: Basic Quantum Mechanical Models
cumulant expansion
14.3: Gaussian-Stochastic Model for Spectral Diffusion

D

Davydov splitting
15.3: Excitons in Molecular Aggregates
density matrix
5: The Density Matrix
5.1: Introduction to the Density Matrix
8: Mixed States and the Density Matrix
density operator
5.1: Introduction to the Density Matrix
diabatic surface
6.3: Diabatic and Adiabatic States
diagonalizing
1.2: Matrix Mechanics
dipole autocorrelation function
13.3: Semiclassical Approximation to the Dipole Correlation Function

Dirac Notation

1.2: Matrix Mechanics

Discrete Variable Representation

1.5: Numerically Solving the Schrödinger Equation

Displaced Harmonic Oscillator Model

13.1: The Displaced Harmonic Oscillator Model

dissipative dynamics

4.1: Introduction to Dissipative Dynamics

E

eigenfunctions
1.1: Describing a System Quantum Mechanically
eigenvalues
1.1: Describing a System Quantum Mechanically
electric dipole approximation
7.3: Quantum Mechanical Electric Dipole Hamiltonian
Electric Dipole Hamiltonian
7.3: Quantum Mechanical Electric Dipole Hamiltonian
Electric Quadrupole Transitions
7.7: Appendix - Magnetic Dipole and Electric Quadrupole Transitions
energy gap Hamiltonian
14.4: The Energy Gap Hamiltonian
Ensemble Averaging
12.4: Ensemble Averaging and Line-Broadening
ergodic
9.3: Fluctuations
10.1: Definitions, Properties, and Examples of Correlation Functions
ergodic hypothesis
9.3: Fluctuations
Exchange Narrowing
15.3: Excitons in Molecular Aggregates
excitons
15.3: Excitons in Molecular Aggregates
expectation value
1.2: Matrix Mechanics
Exponential Operators
1.4: Exponential Operators
2.2: Exponential Operators Again

F

Fermi's Golden Rule
3.8: Fermi's Golden Rule
fluctuations
9.3: Fluctuations
Frenkel excitons
15.3: Excitons in Molecular Aggregates
15.4: Multiple Particles and Second Quantization
FRET
15.2: Förster Resonance Energy Transfer (FRET)

G

gauge invariance
7.6: Appendix - Review of Free Electromagnetic Field

H

harmonic bath
13.2: Coupling to a Harmonic Bath
14.5: Correspondence of Harmonic Bath and Stochastic Equations of Motion
Heaviside function
3.8: Fermi's Golden Rule
Heisenberg Representations
3.5: Schrödinger and Heisenberg Representations
Hermitian operators
1.2: Matrix Mechanics

I

inhomogeneous broadening
12.4: Ensemble Averaging and Line-Broadening
inner product
1.2: Matrix Mechanics
inner sphere ET
15.5: Marcus Theory for Electron Transfer
interaction picture
3.6: Interaction Picture
5.3: The Density Matrix in the Interaction Picture
inverted regime
15.5: Marcus Theory for Electron Transfer

J

joint probability distributions
14.1: Fluctuations and Randomness - Some Definitions

K

ket vector
1.2: Matrix Mechanics
Kramers–Krönig relations
11.1: Classical Linear Response Theory

L

ladder operators
1.3: Basic Quantum Mechanical Models
Landau–Zener expression
6.5: Landau–Zener Transition Probability
line broadening
7.4: Relaxation and Line-Broadening
14.2: Line-Broadening and Spectral Diffusion
linear response function
11.1: Classical Linear Response Theory
lineshape function
12.4: Ensemble Averaging and Line-Broadening
Lorentz condition
7.6: Appendix - Review of Free Electromagnetic Field

M

Magnetic Dipole Transitions
7.7: Appendix - Magnetic Dipole and Electric Quadrupole Transitions
Marcus Theory
15.5: Marcus Theory for Electron Transfer
Markov approximation
16.2: A Density Matrix Description of Quantum Relaxation

master equation

[16.2: A Density Matrix Description of Quantum Relaxation](#)

Matrix Mechanics
