

CHAPTER OVERVIEW

20: Boltzmann Statistics

- [20.1: The Independent-Molecule Approximation](#)
- [20.2: The Probability of An Energy Level at Constant N, V, and T](#)
- [20.3: The Population Sets of a System at Equilibrium at Constant N, V, and T](#)
- [20.4: How can Infinitely Many Probabilities Sum to Unity?](#)
- [20.5: The Total Probability Sum at Constant N, V, and T](#)
- [20.6: The Most Probable Population Set at Constant N, V, and T](#)
- [20.7: The Microstates of a Given Population Set](#)
- [20.8: The Probabilities of Microstates that Have the Same Energy](#)
- [20.9: The Probabilities of the Population Sets of an Isolated System](#)
- [20.10: Entropy and Equilibrium in an Isolated System](#)
- [20.11: Thermodynamic Probability and Equilibrium in an Isomerization Reaction](#)
- [20.12: The Degeneracy of an Isolated System and Its Entropy](#)
- [20.13: The Degeneracy of an Isolated System and its Entropy](#)
- [20.14: Effective Equivalence of the Isothermal and Constant-energy Conditions](#)
- [20.15: Problems](#)
