

# Index

## A

**absolute entropy**  
11.5: Absolute Entropy

**absolute zero**  
2.5: The Kelvin Temperature Scale  
11.13: Absolute Zero is Unattainable

**activated complex**  
5.6: Mechanisms and Elementary Processes

**activation energy**  
5.4: The Effect of Temperature on Reaction Rates

**activity**  
14.10: Chemical Activity  
16.19: Finding Solute Activity Using the Hypothetical One-molal Standard State

**activity coefficient**  
14.10: Chemical Activity  
16.3: Expressing the Activity Coefficient as a Deviation from Raoult's Law

**Adiabatic Changes**  
6.10: Duhem's Theorem - Specifying Reversible Change in A Closed System

**adiabatic demagnetization**  
11.13: Absolute Zero is Unattainable

**Amagat's Law**  
2.15: Gas Mixtures - Amagat's Law of Partial Volumes

**anode**  
17.6: Electrochemical Cells as Circuit Elements

**Arrhenius equation**  
5.4: The Effect of Temperature on Reaction Rates

**average speed in gas**  
4.8: Statistics for Molecular Speeds

**Avogadro's number**  
2.3: Avogadro's Hypothesis

**Avogadro's Number**  
2.4: Finding Avogadro's Number

## B

**Balancing Redox Equations**  
17.4: Balancing Oxidation-reduction Reactions

**Bar Graphs**  
3.5: Bar Graphs and Histograms

**barometer**  
2.11: The Barometric Formula

**barometric formula**  
2.11: The Barometric Formula

**batch reaction**  
5.2: Reaction Rates and Rate Laws

**boiling point elevation**  
16.10: Colligative Properties - Boiling-point Elevation

**boiling point elevation constant**  
16.10: Colligative Properties - Boiling-point Elevation

**Boltzmann constant**  
2.7: The Ideal Gas Constant and Boltzmann's Constant

**Boltzmann equation**  
20.3: The Population Sets of a System at Equilibrium at Constant N, V, and T  
21.4: Deriving the Boltzmann Equation II

**Boltzmann Statistics**  
20: Boltzmann Statistics

## C

**calorie (unit)**  
7.9: Measuring Heat

**calorimetry**  
8.9: Calorimetry

**canonical ensemble**  
23.1: Ensembles of N-molecule Systems

**Carnot cycle**  
9.2: The Carnot Cycle for an Ideal Gas and the Entropy Concept

**Carnot engine**  
9.2: The Carnot Cycle for an Ideal Gas and the Entropy Concept

**catalyst**  
5.5: Other Factors that Affect Reaction Rates

**cathode**  
17.6: Electrochemical Cells as Circuit Elements

**Cell Notation**  
17.12: Standard Electrode Potentials

**center of mass frame**  
4.10: Collisions between Gas Molecules Relative Velocity Coordinates

**central limit theorem**  
3.11: The Variance of the Average- The Central Limit Theorem

**chemical potential**  
14: Chemical Potential - Extending the Scope of the Fundamental Equation  
14.1: Dependence of the Internal Energy on the Composition of the System

**Clapeyron equation**  
12.6: Phase Equilibria - Temperature Dependence of the Boiling Point  
12.8: The Clapeyron Equation

**closed system**  
6.1: The Thermodynamic Perspective

**coefficient of isothermal compressibility**  
10.4: Expressing Thermodynamic Functions with Independent Variables V and T

**coefficient of thermal expansion**  
8.3: How Enthalpy Depends on Pressure  
10.4: Expressing Thermodynamic Functions with Independent Variables V and T  
10.9: The Relationship Between Cv and Cp for Any Substance

**cognitive dissonance**  
1.9: A Few Ideas from the Philosophy of Science

**colligative property**  
16.9: Properties of Ideal Solutions

**collision radius**  
4.12: The Frequency of Collisions between Unlike Gas Molecules

**collision theory**  
5.7: Rate Laws for Elementary Processes

**Compound Interest**  
5.9: First-order Rate Processes

**compressibility factor**  
2.13: Virial Equations

**conservation of energy**  
7.10: The First Law of Thermodynamics

**Continuous Distribution Functions**  
3.6: Continuous Distribution Functions - the Envelope Function is the Derivative of the Area

**contrapositive**  
1.10: A Few Ideas from Formal Logic

## CSTR

5.11: Rate Laws from Experiments in a Continuous Stirred Tank Reactor

## Cumulative Distribution Function

3.8: A Heuristic View of the Cumulative Distribution Function

**cumulative probability distribution function**

3.5: Bar Graphs and Histograms

## D

### Dalton's law of partial pressures

2.14: Gas Mixtures - Dalton's Law of Partial Pressures

### de Broglie wavelength

18.2: Quantized Energy - De Broglie's Hypothesis and the Schroedinger Equation

### degeneracy

20.1: The Independent-Molecule Approximation

### detailed balance

5.18: The Principle of Microscopic Reversibility

### distribution coefficient

6.4: Distribution Equilibria

### Distribution Equilibria

6.4: Distribution Equilibria

### Duhem's Theorem

6.10: Duhem's Theorem - Specifying Reversible Change in A Closed System

## E

### electrical potential

17.5: Electrical Potential

### electrical work

7.8: Measuring Work- Non-Pressure-Volume Work

### electrode

17.2: Electrochemical Cells

### electrolytic cell

17.7: The Direction of Electron Flow and its Implications

### elementary process

5.6: Mechanisms and Elementary Processes

### ensemble

23.1: Ensembles of N-molecule Systems

### ensemble treatment

20.3: The Population Sets of a System at Equilibrium at Constant N, V, and T

### enthalpy

7.15: Defining Enthalpy, H  
8.1: Enthalpy

### entropy of mixing

13.3: The Thermodynamics of Mixing Ideal Gases

### equal a priori probabilities

20.8: The Probabilities of Microstates that Have the Same Energy

### equation of state

6.7: The Number of Variables Required to Specify Some Familiar Systems

### equilibrium constant

5.17: Chemical Equilibrium as the Equality of Rates for Opposing Reactions

### equilibrium dissociation energy

24.7: The Electronic Partition Function of an Ideal Gas

### exact differential

7.4: Exact Differentials and State Functions

## Exact Differentials

7.4: Exact Differentials and State Functions

## exactness

7.5: Determining Whether an Expression is an Exact Differential

## exogenous variable

21.7: The Microscopic Model for Reversible Change

## expectation value

3.9: Random Variables, Expected Values, and Population Sets

## expected value

3.9: Random Variables, Expected Values, and Population Sets

## extent of reaction

5.2: Reaction Rates and Rate Laws

## F

### faraday (unit)

2.4: Finding Avogadro's Number  
17.8: Electrolysis and the Faraday

### first law of thermodynamics

7.10: The First Law of Thermodynamics

### flooding

5.8: Experimental Determination of Rate Laws  
5.12: Predicting Rate Laws from Proposed Mechanisms

### free expansion

7.17: Free Expansion of a Gas

### fugacity

11.7: The Fugacity of a Gas

### fugacity coefficient

11.7: The Fugacity of a Gas

## G

### galvanic cell

17.6: Electrochemical Cells as Circuit Elements

### Gibbs Energy of Formation

11.9: The Standard Entropy and the Gibbs Free Energy of Formation

### Gibbs' Phase Rule

6.8: Gibbs' Phase Rule

### Gibbsian equilibrium manifold

6.12: Equilibria and Reversible Processes

## H

### half cell

17.11: Half-reactions and Half-cells

### half life

5.9: First-order Rate Processes

### Hamiltonian

18.2: Quantized Energy - De Broglie's Hypothesis and the Schroedinger Equation

### Henry's law

16.6: Henry's Law and the Hypothetical One-molal Standard State

### Hess's Law

8.6: Standard Enthalpies of Reaction

### histograms

3.5: Bar Graphs and Histograms

## I

### ideal gas constant

2.7: The Ideal Gas Constant and Boltzmann's Constant

### ideal gas thermometer

2.9: Temperature and the Ideal Gas Thermometer

### ideal gases

2.8: Real Gases Versus Ideal Gases

### ideal solution

16.2: Raoult's Law and Ideal Solutions  
16.9: Properties of Ideal Solutions

### inexact differential

7.2: The Total Differential

### inhibitor

5.5: Other Factors that Affect Reaction Rates

### ionic strength

16.18: Activities of Electrolytes - The Debye-Hückel Theory

### irreversible work

7.18: Reversible vs. Irreversible Pressure-Volume Work

### isolated system

6.1: The Thermodynamic Perspective

### isomeric molecules

21.5: Partition Functions and Equilibrium - Isomeric Molecules

### isothermal compressibility

10.4: Expressing Thermodynamic Functions with Independent Variables V and T  
10.9: The Relationship Between Cv and Cp for Any Substance

### isothermal process

7.17: Free Expansion of a Gas

## J

### joule (unit)

7.9: Measuring Heat

## K

### kinetic isotope effect

5.5: Other Factors that Affect Reaction Rates

## L

### Lagrange's method of undetermined multipliers

21.2: Lagrange's Method of Undetermined Multipliers

### Law of Dulong and Petit

7.14: Heat Capacities of Solids- the Law of Dulong and Petit

### Law of Mass Action

5.17: Chemical Equilibrium as the Equality of Rates for Opposing Reactions

### Le Chatelier's principle

6.6: Le Chatelier's Principle

### Lindemann mechanism

5.14: The Lindemann-Hinshelwood Mechanism for First-order Decay

### line integrals

7.3: Line Integrals

## M

### mean

3.10: Statistics - the Mean and the Variance of a Distribution

### mean activity coefficient

16.17: Activities of Electrolytes - The Mean Activity Coefficient

### mean free path

4.12: The Frequency of Collisions between Unlike Gas Molecules

### medium effect

5.5: Other Factors that Affect Reaction Rates

### melting point

12.7: Phase Equilibria - Temperature Dependence of the Melting Point

### Method of Initial Rates

5.8: Experimental Determination of Rate Laws

### microscopic reversibility

5.18: The Principle of Microscopic Reversibility  
5.19: Microscopic Reversibility and the Second Law

### microstate

20.7: The Microstates of a Given Population Set

### molecular partition function

21.1: Finding the Boltzmann Equation

### most probable speed in gas

4.8: Statistics for Molecular Speeds

## N

### Nernst heat theorem

11.4: Genesis of the Third Law - the Nernst Heat Theorem

### normal distribution

3.12: The Normal Distribution  
3.13: The Expected Value of a Function of Several Variables and the Central Limit Theorem

## O

### open system

6.1: The Thermodynamic Perspective

### osmotic pressure

16.12: Colligative Properties - Osmotic Pressure

### Oxidation Potential

17.12: Standard Electrode Potentials

### oxidation states

17.3: Defining Oxidation States

## P

### partial molar quantities

14.3: Partial Molar Quantities

### partial pressure

2.14: Gas Mixtures - Dalton's Law of Partial Pressures

### partial volume

2.14: Gas Mixtures - Dalton's Law of Partial Pressures

### partition function

22.1: Interpreting the Partition Function

### permutations

19.1: Distribution of Results for Multiple Trials with Two Possible Outcomes

### phase equilibria

12.7: Phase Equilibria - Temperature Dependence of the Melting Point

### principle of microscopic reversibility

1.2: Chemical Kinetics

### probability density

3.6: Continuous Distribution Functions - the Envelope Function is the Derivative of the Area

### Probability of Alternative Events

3.3: Some Important Properties of Events

### Probability of Compound Events

3.3: Some Important Properties of Events

### proposition

1.10: A Few Ideas from Formal Logic

## R

### rank probability

3.8: A Heuristic View of the Cumulative Distribution Function

### Rankine scale

2.5: The Kelvin Temperature Scale

### Raoult's law

16.2: Raoult's Law and Ideal Solutions

## Rapid Equilibrium Approximation

[5.12: Predicting Rate Laws from Proposed Mechanisms](#)
