

## 1.55: Holohedry

---

The point group of a crystal is called holohedry if it is identical to the point group of its lattice. In the three-dimensional space, there are seven holohedral geometric crystal classes:  $\bar{1}$ ,  $2/m$ ,  $mmm$ ,  $\bar{3}m$ ,  $4/mmm$ ,  $6/mmm$ ,  $m\bar{3}m$
