

## Index

### A

#### Abelian

[1.5: Combining Symmetry Operations - 'Group Multiplication'](#)

### B

#### block diagonal

[1.12: Reduction of Representations I](#)

### C

#### character

[1.11: Properties of Matrix Representations](#)

#### character table

[1.14: Character Tables](#)

#### chirality

[1.4: Symmetry and Physical Properties](#)

### D

#### degrees of freedom

[1.24: Molecular Vibrations](#)

#### direct sum

[1.12: Reduction of Representations I](#)

### E

#### electric dipole operator

[1.27: Spectroscopy - Interaction of Atoms and Molecules with Light](#)

### G

#### Great Orthogonality Theorem

[1.15: Reduction of representations II](#)

#### group multiplication

[1.5: Combining Symmetry Operations - 'Group Multiplication'](#)

### L

#### Little Orthogonality Theorem

[1.15: Reduction of representations II](#)

### M

#### matrix representative

[1.23: A more complicated bonding example](#)

#### molecular orbital

[1.26: Group theory and Molecular Electronic States](#)

### P

#### point groups

[1.3: Symmetry Classification of Molecules- Point Groups](#)

#### polarity

[1.4: Symmetry and Physical Properties](#)

#### projection operator

[1.16: Symmetry Adapted Linear Combinations \(SALCs\)](#)

### S

#### SALC

[1.12: Reduction of Representations I](#)

[1.16: Symmetry Adapted Linear Combinations \(SALCs\)](#)

#### Schoenflies

[1.3: Symmetry Classification of Molecules- Point Groups](#)

#### secular equations

[1.21: Solving the Secular Equations](#)

#### similarity transform

[1.11: Properties of Matrix Representations](#)

#### symmetry adapted linear combination

[1.12: Reduction of Representations I](#)

[1.16: Symmetry Adapted Linear Combinations \(SALCs\)](#)

#### symmetry elements

[1.2: Symmetry Operations and Symmetry Elements](#)

#### symmetry operations

[1.2: Symmetry Operations and Symmetry Elements](#)

### U

#### unfaithful representation

[1.12: Reduction of Representations I](#)
