

CHAPTER OVERVIEW

3: Infrared Spectroscopy

This chapter will focus on infrared (IR) spectroscopy. The wavelengths found in infrared radiation are a little longer than those found in visible light. IR spectroscopy is useful for finding out what kinds of bonds are present in a molecule, and knowing what kinds of bonds are present is a good start towards knowing what the structure could be.

- [3.1: Introduction](#)
- [3.2: Hydrocarbon Spectra](#)
- [3.3: Some Subtle Points of IR Spectroscopy](#)
- [3.4: Carbon-Carbon Multiple Bonds](#)
- [3.5: Bonds to Common Heteroatoms- Oxygen](#)
- [3.6: Carbon-Oxygen Double Bonds](#)
- [3.7: Bonds to Common Heteroatoms- Nitrogen](#)
- [3.8: More Complicated Spectra](#)
- [3.9: Misleading Peaks](#)
- [3.10: Additional Problems](#)
- [3.11: Solutions for Selected Problems](#)
- [3.12: Appendix](#)
