

CHAPTER OVERVIEW

2: Boltzmann Statistics

- 2.1: The Independent-Molecule Approximation
- 2.2: The Probability of An Energy Level at Constant N , V , and T
- 2.3: The Population Sets of a System at Equilibrium at Constant N , V , and T
- 2.4: How can Infinitely Many Probabilities Sum to Unity?
- 2.5: The Total Probability Sum at Constant N , V , and T
- 2.6: The Most Probable Population Set at Constant N , V , and T
- 2.7: The Microstates of a Given Population Set
- 2.8: The Probabilities of Microstates that Have the Same Energy
- 2.9: The Probabilities of the Population Sets of an Isolated System
- 2.10: Entropy and Equilibrium in an Isolated System
- 2.11: Thermodynamic Probability and Equilibrium in an Isomerization Reaction
- 2.12: The Degeneracy of an Isolated System and Its Entropy
- 2.13: The Degeneracy of an Isolated System and its Entropy
- 2.14: Effective Equivalence of the Isothermal and Constant-energy Conditions
- 2.15: Problems
