

TABLE OF CONTENTS

Introduction

Licensing

What is Nonlinear Spectroscopy?

1: Coherent Spectroscopy and the Nonlinear Polarization

- 1.1: Linear Absorption Spectroscopy
- 1.2: Nonlinear Polarization
- 1.3: Third Order Response
- 1.4: Summary - General Expressions for nth Order Nonlinearity

2: Diagrammatic Perturbation Theory

- 2.1: Feynman Diagrams
- 2.2: Ladder Diagrams
- 2.3: Example-Linear Response for a Two-Level System
- 2.4: Example- Second-Order Response for a Three-Level System
- 2.5: Third-Order Nonlinear Spectroscopy
- 2.6: Frequency Domain Representation(1)
- 2.7: Appendix- Third-order diagrams for a four-level system
- 2.8: Appendix- Third-order diagrams for a vibration

3: Third-Order Nonlinear Spectroscopies

- 3.1: Selecting signals by wavevector
- 3.2: Photon Echo
- 3.3: Transient Grating
- 3.4: Pump-Probe
- 3.5: CARS (Coherent Anti-Stoke Raman Scattering)

4: Characterizing Fluctuations

- 4.1: Eigenstate vs. system/bath perspectives
- 4.2: Energy Gap Fluctuations
- 4.3: Nonlinear Response with the Energy Gap Hamiltonian
- 4.4: How Can you Characterize Fluctuations and Spectral Diffusion?

5: Two-Dimensional Spectroscopy

- 5.1: Two-Dimensional Correlation Spectroscopy
- 5.2: 2D Spectroscopy from Third Order Response
- 5.3: Fourier Transform Spectroscopy
- 5.4: Characterizing Couplings in 2D Spectra
- 5.5: Two-dimensional spectroscopy to characterize spectral diffusion
- 5.6: Appendix- Third Order Diagrams Corresponding to Peaks in a 2D Spectrum of Coupled Vibrations
