Preface

1: Environmental Toxicology

- 1.1: Environmental toxicology
- 1.2: DPSIR
- 1.3: Short history

2: Environmental Chemistry, Chemicals

- 2.1: Introduction
- 2.2: Pollutants with specific properties
- 2.3: Pollutants with specific use

3: Environmental Chemistry - From Fate to Exposure

- 3.1: Environmental compartments
- 3.2: Sources of chemicals
- 3.3: Pathways and processes determining chemical fate
- 3.4: Partitioning and Partitioning Constants
- 3.5: Metal Speciation

4: Toxicology

- 4.1: Toxicokinetics
- 4.2: Toxicodynamics and Molecular Interactions
- 4.3: Toxicity Testing
- 4.4: Increasing ecological realism in toxicity testing
- 4.5: Availability and bioavailability
- 4.6: Degradation
- 4.7: Modelling exposure
- 4.8: Section 4.1. Toxicokinetics
- 4.9: Section 4.4. Increasing ecological realism in toxicity testing
- 4.10: Section 4.2. Toxicodynamics and Molecular Interactions
- 4.11: Section 4.3. Toxicity testing

5: Population, Community and Ecosystem Ecotoxicology

- 5.1: Introduction- Linking population, community and ecosystem responses
- 5.2: Population ecotoxicology in laboratory settings
- 5.3: Wildlife population ecotoxicology
- 5.4: Trait-based approaches
- 5.5: Population models
- 5.6: Metapopulations
- 5.7: Community ecotoxicology
- 5.8: Structure versus function incl. ecosystem services
- 5.9: Landscape ecotoxicology

6: Risk Assessment and Regulation

- 6.1: Introduction - The Essence of Risk Assessment
- 6.2: Ecosystem services and protection goals
- 6.3: Predictive risk assessment approaches and tools
- 6.4: Diagnostic risk assessment approaches and tools
- 6.5: Regulatory Frameworks
- 6.6: Risk management and risk communication
- 6.7: Risk perception
