

## Index

### A

Acyloin reaction  
     4: Radical Reactions  
 AIBN  
     4: Radical Reactions  
 Alder Endo Rule  
     1.2: Cycloaddition Reactions  
 Alkyne cyclotrimerization reaction  
     2.4: Co-Mediated Ring Forming Reactions  
 Alkyne metathesis  
     2.3: Olefin Metathesis  
 allyl ligand  
     2.1: Introduction to Transition Metals and Mechanistic Steps  
 Alpha Elimination  
     5: Carbene Reactions  
 Antarafacial  
     1.1: Introduction to Pericyclic Reactions  
     1.4: Sigmatropic Rearrangements

### B

Barbaralone  
     5: Carbene Reactions  
 Barton decarboxylation  
     4: Radical Reactions  
 Beckmann fragmentation  
     3.4: Fragmentations  
 Beckmann rearrangement  
     3.3: Rearrangements  
 Benzilic acid rearrangement  
     3.3: Rearrangements  
 benzyne  
     1.2: Cycloaddition Reactions  
 Beta hydrogen elimination  
     2.1: Introduction to Transition Metals and Mechanistic Steps  
 Bu<sub>3</sub>SnH  
     4: Radical Reactions  
 Buchner reaction  
     5: Carbene Reactions  
 bullvalene  
     1.4: Sigmatropic Rearrangements  
     5: Carbene Reactions

### C

carbene  
     5: Carbene Reactions  
 carbenoid  
     5: Carbene Reactions  
 carbonyl ene reaction  
     1.2: Cycloaddition Reactions  
 carbonylative Stille reaction  
     2.2: Pd-Catalyzed Cross Coupling Reactions  
 Claisen rearrangement  
     1.4: Sigmatropic Rearrangements  
 conrotatory  
     1.1: Introduction to Pericyclic Reactions  
     1.3: Electrocyclic Reactions  
 Cope rearrangement  
     1.4: Sigmatropic Rearrangements  
 Cross metathesis  
     2.3: Olefin Metathesis

### cubane

    1.2: Cycloaddition Reactions  
 Curtius rearrangement  
     3.3: Rearrangements  
 Cycloadditions  
     1.1: Introduction to Pericyclic Reactions  
 Cyclopropanation  
     5: Carbene Reactions

### D

Danishefsky's diene  
     1.2: Cycloaddition Reactions  
 diazo compounds  
     5: Carbene Reactions  
 diene  
     1.1: Introduction to Pericyclic Reactions  
     1.2: Cycloaddition Reactions  
 dienophile  
     1.1: Introduction to Pericyclic Reactions  
     1.2: Cycloaddition Reactions  
 Dipolar cycloaddition  
     1.2: Cycloaddition Reactions  
 Dipolarophile  
     1.2: Cycloaddition Reactions  
 disrotatory  
     1.1: Introduction to Pericyclic Reactions  
     1.3: Electrocyclic Reactions

### E

electrocyclic reactions  
     1.1: Introduction to Pericyclic Reactions  
     1.3: Electrocyclic Reactions  
 Ene reaction  
     1.2: Cycloaddition Reactions  
 Enophile  
     1.2: Cycloaddition Reactions  
 Eschenmoser Fragmentation  
     3.4: Fragmentations

### F

Favorskii rearrangement  
     3.3: Rearrangements  
 ferrocene  
     2.1: Introduction to Transition Metals and Mechanistic Steps  
 fragmentations  
     3.1: Introduction to Neighboring Group Participation, Rearrangements, and Fragmentations  
     3.4: Fragmentations

### G

Grob Fragmentation  
     3.4: Fragmentations  
 Grubbs 1st generation catalyst  
     2.3: Olefin Metathesis  
 Grubbs 2nd generation catalyst  
     2.3: Olefin Metathesis

### H

Heck reaction  
     2.2: Pd-Catalyzed Cross Coupling Reactions

### hirsutene

    4: Radical Reactions  
 HOMO  
     1.1: Introduction to Pericyclic Reactions  
     1.2: Cycloaddition Reactions  
     1.3: Electrocyclic Reactions  
     1.4: Sigmatropic Rearrangements  
 Hydride shift  
     1.4: Sigmatropic Rearrangements  
 Hydrogen Atom Transfer  
     4: Radical Reactions

### K

Ketene  
     1.2: Cycloaddition Reactions  
 Ketene thermal [2+2] cycloaddition  
     1.2: Cycloaddition Reactions  
 Ketenophile  
     1.2: Cycloaddition Reactions  
 Kumada reaction  
     2.2: Pd-Catalyzed Cross Coupling Reactions

### L

Ligands  
     2.1: Introduction to Transition Metals and Mechanistic Steps  
 LUMO  
     1.1: Introduction to Pericyclic Reactions  
     1.2: Cycloaddition Reactions

### M

McMurry reaction  
     4: Radical Reactions  
 Metal oxidation state  
     2.1: Introduction to Transition Metals and Mechanistic Steps  
 Migratory insertion  
     2.1: Introduction to Transition Metals and Mechanistic Steps

### N

Nazarov Reaction  
     1.3: Electrocyclic Reactions  
 Negishi reaction  
     2.2: Pd-Catalyzed Cross Coupling Reactions  
 Neighboring group participation  
     3.1: Introduction to Neighboring Group Participation, Rearrangements, and Fragmentations  
     3.2: Neighboring Group Participation

### O

Olefin (alkene) metathesis  
     2.3: Olefin Metathesis  
 Oxidative addition  
     2.1: Introduction to Transition Metals and Mechanistic Steps

### P

Payne rearrangement  
     3.3: Rearrangements  
 pericyclic reactions  
     1.1: Introduction to Pericyclic Reactions

## Phenonium ion

[3.2: Neighboring Group Participation](#)

## Photo [2+2] cycloaddition

[1.2: Cycloaddition Reactions](#)

## Pi donor ligands

[2.1: Introduction to Transition Metals and Mechanistic Steps](#)

## Pinacol reaction

[4: Radical Reactions](#)

## Pinacol rearrangement

[3.3: Rearrangements](#)

## R

### radical dehalogenation reaction

[4: Radical Reactions](#)

### Radical initiation

[4: Radical Reactions](#)

### Radical propagation

[4: Radical Reactions](#)

### Radical termination

[4: Radical Reactions](#)

### rearrangements

[3.1: Introduction to Neighboring Group Participation, Rearrangements, and Fragmentations](#)

## Reductive elimination

[2.1: Introduction to Transition Metals and Mechanistic Steps](#)

## Ring closing metathesis

[2.3: Olefin Metathesis](#)

## S

### Schrock catalyst

[2.3: Olefin Metathesis](#)

### Semipinacol rearrangement

[3.3: Rearrangements](#)

### sigmatropic rearrangements

[1.1: Introduction to Pericyclic Reactions](#)

[1.4: Sigmatropic Rearrangements](#)

### Single Electron Transfer

[4: Radical Reactions](#)

### Singlet carbene

[5: Carbene Reactions](#)

### Sonogashira reaction

[2.2: Pd-Catalyzed Cross Coupling Reactions](#)

### Stevens rearrangement

[5: Carbene Reactions](#)

### Stille reaction

[2.2: Pd-Catalyzed Cross Coupling Reactions](#)

## Suprafacial

[1.1: Introduction to Pericyclic Reactions](#)

[1.4: Sigmatropic Rearrangements](#)

## Suzuki reaction

[2.2: Pd-Catalyzed Cross Coupling Reactions](#)

## T

### Transition metal complex

[2.1: Introduction to Transition Metals and Mechanistic Steps](#)

### Transmetallation

[2.1: Introduction to Transition Metals and Mechanistic Steps](#)

### Triplet carbene

[5: Carbene Reactions](#)

## W

### Wilkinson's catalyst

[2.1: Introduction to Transition Metals and Mechanistic Steps](#)

### Wittig rearrangement

[1.4: Sigmatropic Rearrangements](#)

### Wolff rearrangement

[3.3: Rearrangements](#)

### Wolff rearrangements

[5: Carbene Reactions](#)
