

Index

A

acid ionization
5.1: Brønsted-Lowry Acids and Bases
acid ionization constant
5.3: Relative Strengths of Acids
5.4: pH Calculations for Weak Acids
5.5: Relative Strengths of Bases
5.6: Relating Structure to Acidity and Basicity
acid–base titrations
6.6: pH Calculations for Acid–Base Titrations
acidic
5.2: pH and pOH
Actinide series
2.1: Properties of Transition Metals
activated complex
3.5: Collision Theory
activation energy
3.5: Collision Theory
active electrode
9.2: Galvanic Cells
addition reaction
1.9: Organic Reactions
alkaline battery
9.5: Batteries and Fuel Cells
alpha decay
10.2: Radioactive Decay
alpha particle
10.1: Nuclear Equations
ambidentate isomerism
2.5: Isomerism
amphiprotic
5.1: Brønsted-Lowry Acids and Bases
amphoteric
5.1: Brønsted-Lowry Acids and Bases
anode
9.2: Galvanic Cells
antimatter
10.1: Nuclear Equations
Arrhenius equation
3.5: Collision Theory
autoionization
5.1: Brønsted-Lowry Acids and Bases
average rate
3.1: Chemical Reaction Rates

B

band of stability
10.3: Nuclear Structure and Stability
base ionization
5.1: Brønsted-Lowry Acids and Bases
base ionization constant
5.3: Relative Strengths of Acids
5.4: pH Calculations for Weak Acids
5.5: Relative Strengths of Bases
5.6: Relating Structure to Acidity and Basicity
Basic
5.2: pH and pOH
basic oxides
7.6: Solubility and pH
battery
9.5: Batteries and Fuel Cells

becquerel (unit)
10.6: Biological Effects of Radiation
beta decay
10.2: Radioactive Decay
beta particle
10.1: Nuclear Equations
bidentate ligand
2.2: Coordination Chemistry of Transition Metals
bimolecular reaction
3.6: Reaction Mechanisms
binding energy per nucleon
10.3: Nuclear Structure and Stability
buffer
6.3: Buffers
6.4: Henderson-Hasselbalch Approximation
buffer capacity
6.3: Buffers

C

catalyst
3.2: Factors Affecting Reaction Rates
cathode
9.2: Galvanic Cells
cathodic protection
9.6: Corrosion
Cell Notation
9.2: Galvanic Cells
cell potential
9.2: Galvanic Cells
central metal
2.2: Coordination Chemistry of Transition Metals
chain reaction
10.4: Transmutation and Nuclear Energy
chelate
2.2: Coordination Chemistry of Transition Metals
chelating ligand
2.2: Coordination Chemistry of Transition Metals
chemical tests
7.8: Qualitative Cation Analysis
Chemotherapy
10.5: Uses of Radioisotopes
circuit
9.1: Balancing Oxidation-Reduction Reactions
cis configuration
2.2: Coordination Chemistry of Transition Metals
collision theory
3.5: Collision Theory
common ion effect
7.3: Common-Ion Effect in Solubility Equilibria
7.6: Solubility and pH
complex ion
7.7: Equilibria Involving Complex Ions
concentration cell
9.4: The Nernst Equation
condensation reaction
1.9: Organic Reactions
conjugate acid
5.1: Brønsted-Lowry Acids and Bases
conjugate base
5.1: Brønsted-Lowry Acids and Bases
constitutional isomers
2.5: Isomerism

containment system
10.4: Transmutation and Nuclear Energy
control rod
10.4: Transmutation and Nuclear Energy
coordination compound
2.1: Properties of Transition Metals
2.2: Coordination Chemistry of Transition Metals
coordination number
2.2: Coordination Chemistry of Transition Metals
coordination sphere
2.2: Coordination Chemistry of Transition Metals
corrosion
9.6: Corrosion
coupled reactions
8.8: Coupled Reactions
critical mass
10.4: Transmutation and Nuclear Energy
crystal field splitting
2.6: Optical and Magnetic Properties of Coordination Compounds
crystal field theory
2.6: Optical and Magnetic Properties of Coordination Compounds
curie (unit)
10.6: Biological Effects of Radiation
Current
9.1: Balancing Oxidation-Reduction Reactions

D

daughter nuclide
10.2: Radioactive Decay
diprotic acid
6.2: Polyprotic Acids
diprotic base
6.2: Polyprotic Acids
donor atom
2.2: Coordination Chemistry of Transition Metals
dry cell
9.5: Batteries and Fuel Cells

E

eg orbitals
2.6: Optical and Magnetic Properties of Coordination Compounds
electrical potential
9.1: Balancing Oxidation-Reduction Reactions
electrical work
9.4: The Nernst Equation
electrolysis
9.7: Electrolysis
electrolytic cell
9.7: Electrolysis
electron capture
10.2: Radioactive Decay
electron volt
10.3: Nuclear Structure and Stability
electroplating
9.7: Electrolysis
elementary reaction
3.6: Reaction Mechanisms
elimination reaction
1.9: Organic Reactions

enantiomers
