

## 10.5: Appendix - Jacobians

### Appendix: Jacobians

#### A.1. 3D to 1D

A Jacobian is a mathematical entity used to switch partials inside an integral. For the case of velocity in three dimensions being converted into spherical coordinates, where  $v$  is the net velocity and  $a$  is a sphere's radius:

$$\frac{\partial v_x}{\partial r} \frac{\partial v_y}{\partial r} \frac{\partial v_z}{\partial r} = \frac{\partial}{\partial r} \left( \frac{\partial (v_x, v_y, v_z)}{\partial (r, \theta, \phi)} \right) \frac{\partial (r, \theta, \phi)}{\partial v} \frac{\partial v}{\partial r} \frac{\partial r}{\partial \theta} \frac{\partial \theta}{\partial \phi} = v^2 \frac{\partial}{\partial r}$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \frac{\partial v}{\partial \phi} \frac{\partial \phi}{\partial \theta} \frac{\partial \theta}{\partial \phi} = v \sin(\phi)$$

To evaluate the above, we should have some idea how to convert  $v_x, v_y, v_z$  into spherical coordinates to begin with. It's just a lesson in geometry:

$$v_x = v \cos(\theta) \sin(\phi)$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \frac{\partial}{\partial \phi}$$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$$\cos(\theta) v_y = v \sin(\theta) \sin(\phi)$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \frac{\partial}{\partial \phi}$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\theta) v_z = v \cos(\theta) \cos(\phi)$$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$$\cos(\phi) \frac{\partial}{\partial \phi}$$

where  $v = \sqrt{v_x^2 + v_y^2 + v_z^2}$ . The Jacobian  $\left| \frac{\partial (v_x, v_y, v_z)}{\partial (r, \theta, \phi)} \right|$  is the absolute values of the determinant of the following matrix:

$$\frac{\partial (v_x, v_y, v_z)}{\partial (r, \theta, \phi)}$$

UndefinedNameError: reference to undefined name 'det' ([click for details](#))

$$\det \left[ \frac{\partial v_x}{\partial r} \frac{\partial v_x}{\partial \theta} \frac{\partial v_x}{\partial \phi} \frac{\partial v_y}{\partial r} \frac{\partial v_y}{\partial \theta} \frac{\partial v_y}{\partial \phi} \frac{\partial v_z}{\partial r} \frac{\partial v_z}{\partial \theta} \frac{\partial v_z}{\partial \phi} \right]$$

In our coordinate system the absolute value of the determinant of the matrix is:

$$\frac{\partial (v_x, v_y, v_z)}{\partial (r, \theta, \phi)}$$

UndefinedNameError: reference to undefined name 'det' ([click for details](#))

$$\det \left[ \frac{\partial v_x}{\partial r} \frac{\partial v_x}{\partial \theta} \frac{\partial v_x}{\partial \phi} \frac{\partial v_y}{\partial r} \frac{\partial v_y}{\partial \theta} \frac{\partial v_y}{\partial \phi} \frac{\partial v_z}{\partial r} \frac{\partial v_z}{\partial \theta} \frac{\partial v_z}{\partial \phi} \right]$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \frac{\partial}{\partial \phi}$$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$$\cos(\theta) v_z = v \cos(\theta) \cos(\phi)$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \frac{\partial}{\partial \phi}$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\theta) v_z = v \cos(\theta) \cos(\phi)$$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$\cos(\phi)$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$\cos(\theta)$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi)$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\theta) \cdot v$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi)$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$\cos(\theta) \cdot v$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$\cos(\phi)$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\theta)$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$\cos(\phi) \cdot 0 \cdot -v$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \frac{1}{\sqrt{1-v^2(\phi)}} \cdot \frac{1}{\sqrt{1-v^2(\theta)}}$

$\sqrt{1-v^2(\phi)} \cdot \sqrt{1-v^2(\theta)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \sqrt{1-v^2(\phi)} \cdot \sqrt{1-v^2(\theta)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \sqrt{1-v^2(\phi)} \cdot \sqrt{1-v^2(\theta)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \sqrt{1-v^2(\phi)} \cdot \sqrt{1-v^2(\theta)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \sqrt{1-v^2(\phi)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \sqrt{1-v^2(\phi)}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \frac{1}{\sqrt{1-v^2(\phi)}}$

Since we take the absolute value of this result (the negative sign goes away), the final answer is:  $\frac{1}{\sqrt{1-v^2(\phi)}} \cdot \frac{1}{\sqrt{1-v^2(\theta)}}$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$\sin(\phi) \cdot \frac{1}{\sqrt{1-v^2(\phi)}} \cdot \frac{1}{\sqrt{1-v^2(\theta)}}$

When we apply the Jacobian to the Maxwell-Boltzmann formula we see that (bold emphasis added):

$$\left(\frac{m}{2\pi k_B T}\right)^{\frac{3}{2}} \cdot e^{\frac{-m}{2k_B T} v^2} \cdot \frac{\partial v_x}{\partial v} \cdot \frac{\partial v_y}{\partial v} \cdot \frac{\partial v_z}{\partial v} = \left(\frac{m}{2\pi k_B T}\right)^{\frac{3}{2}} \cdot e^{\frac{-m}{2k_B T} v^2} \cdot v^2$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \cdot \frac{\partial v}{\partial \phi} \cdot \frac{\partial \phi}{\partial \theta} \cdot \frac{\partial \theta}{\partial \phi}$$

Now we can integrate out the angles:

$$\left(\frac{m}{2\pi k_B T}\right)^{\frac{3}{2}} \cdot e^{\frac{-m}{2k_B T} v^2} \cdot v^2$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \cdot \frac{\partial v}{\partial \phi} \cdot \frac{\partial \phi}{\partial \theta} \cdot \frac{\partial \theta}{\partial \phi}$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \cdot \frac{\partial v}{\partial \phi} \cdot \frac{\partial \phi}{\partial \theta} \cdot \frac{\partial \theta}{\partial \phi}$$

which leaves us with just a constant:

$$\frac{1}{v^2}$$

UndefinedNameError: reference to undefined name 'sin' ([click for details](#))

$$\sin(\phi) \cdot \frac{\partial v}{\partial \phi} \cdot \frac{\partial \phi}{\partial \theta} \cdot \frac{\partial \theta}{\partial \phi} = -$$

UndefinedNameError: reference to undefined name 'cos' ([click for details](#))

$$\cos(\phi) \cdot \frac{\partial v}{\partial \phi} \cdot \frac{\partial \phi}{\partial \theta} \cdot \frac{\partial \theta}{\partial \phi} = 4\pi$$

leaving us with:

$$4\pi \cdot v^2 \cdot \left(\frac{m}{2\pi k_B T}\right)^{\frac{3}{2}} \cdot e^{\frac{-m}{2k_B T} v^2} \cdot \partial v$$

This is the velocity form of the Maxwell-Boltzmann equation.

## A.2.

$\partial v_a \cdot \partial v_b \rightarrow \partial G \cdot \partial V_{rel}$  : The following Jacobian was used in the calculation of relative velocity:

$$\partial v_a \cdot \partial v_b = \left| \frac{\partial(v_a, v_b)}{\partial(G, V_{rel})} \right| \cdot \partial G \cdot \partial V_{rel}$$

The determinant is:

$$\left| \frac{\partial(v_a, v_b)}{\partial(G, V_{rel})} \right| = \left| \det \left( \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} \right) \right| = \left| \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} - \frac{\partial v_b}{\partial G} \frac{\partial v_a}{\partial V_{rel}} \right|$$

Given that  $v_a = G + \frac{m_b}{m_a + m_b} V_{rel}$  and  $v_b = G - \frac{m_a}{m_a + m_b} V_{rel}$ , we can fill out the matrix:

$$\left| \det \left( \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} \right) \right| = \left| \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} - \frac{\partial v_b}{\partial G} \frac{\partial v_a}{\partial V_{rel}} \right| = \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} + \frac{\partial v_b}{\partial G} \frac{\partial v_a}{\partial V_{rel}} = \frac{\partial v_a}{\partial G} \frac{\partial v_b}{\partial V_{rel}} + \frac{\partial v_b}{\partial G} \frac{\partial v_a}{\partial V_{rel}} = 1$$

Done!
