

Index

A

absolute configuraiton
3.3: Configurations

acetals
4.6: Nucleophilic Addition Reactions

acetoacetate
9.6: Oxidation of fatty acids

acetone
9.6: Oxidation of fatty acids

acetone bodies
4.10: Reactions with cyclic transition state

acid anhydride
2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

acid anhydrides
4.5: Nucleophilic acyl substitution reactions

acid halide
2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

acid halides
4.5: Nucleophilic acyl substitution reactions

acid strength
4.3: Acid-base reactions

acidic amino acid
7.2: Amino acids

acids
4.3: Acid-base reactions

Acquired immunodeficiency syndrome
8.7: Viruses

activating carboxylic acids
4.5: Nucleophilic acyl substitution reactions

activation of a fatty acids
9.6: Oxidation of fatty acids

active site
7.9: Enzymes

active transport
6.8: Cell membrane

acyl cation
4.8: Electrophilic aromatic substitution reactions

acylation of benzene
4.8: Electrophilic aromatic substitution reactions

add of halogen acids to alkynes
4.7: Electrophilic addition reactions

addition of halogen acids to alkenes
4.7: Electrophilic addition reactions

adenosine diphosphate
9.1: Basics of metabolism

adenosine monophosphate
9.1: Basics of metabolism

adenosine triphosphate
9.1: Basics of metabolism

ADP
8.1: Nucleotides -the building blocks of nucleic acids
9.1: Basics of metabolism

Adrenocortical hormones
6.7: Sterols

aerobic condtions
9.3: Oxidation of glucose -the glycolysis

aerobic respiration
9.3: Oxidation of glucose -the glycolysis

AIDS
8.7: Viruses

alcohol breath test
4.9: Reduction and oxidation (redox) reactions

alcohols
2.3: Functional groups containing sp³-hybridized heteroatom

aldehydes
2.4: Functional groups containing sp²-hybridized heteroatom
4.6: Nucleophilic Addition Reactions

alditols
5.4: Reactions of monosaccharides

aldonic acids
5.4: Reactions of monosaccharides

aldoses
5.2: General class names and Common names of monosaccharides

aldosterone
6.7: Sterols

alkane
2.1: Hydrocarbons

alkene
2.1: Hydrocarbons

alkylation of benzene
4.8: Electrophilic aromatic substitution reactions

alkyne
2.1: Hydrocarbons

alpha and beta conformations
5.3: Cyclic structures of monosaccharides

amide
2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

amides
4.5: Nucleophilic acyl substitution reactions

amines
2.3: Functional groups containing sp³-hybridized heteroatom

amino acids
7.2: Amino acids
9.7: Degradation of amino acids

aminoacyl tRNA synthetase
8.4: Ribonucleic acid (RNA) and transcription

AMP
9.1: Basics of metabolism

amphiphilic
6.1: What are lipids?

amylase
9.2: Digestion of food

amylopectin
5.7: Polysaccharides

amylose
5.7: Polysaccharides

anabolic steroids
6.7: Sterols

Anabolism
9.1: Basics of metabolism

anaerobic condtions
9.3: Oxidation of glucose -the glycolysis

anaerobic respiration
9.3: Oxidation of glucose -the glycolysis

Androsterone
6.7: Sterols

angle strain
3.2: Confirmations

anomeric carbon
5.3: Cyclic structures of monosaccharides

anti
3.2: Confirmations

antibiotics
8.5: Translation-Protein Synthesis

anticodon
8.4: Ribonucleic acid (RNA) and transcription

apoenzyme
7.9: Enzymes

aromatic hydrocarbons
2.1: Hydrocarbons

artificial sweetners
5.5: Disaccharides

assigning configuration
3.3: Configurations

Atherosclerosis
6.7: Sterols

atom size
4.3: Acid-base reactions

ATP
8.1: Nucleotides -the building blocks of nucleic acids
9.1: Basics of metabolism

ATP synthase
9.5: Oxidative Phosphorylation

ATP synthesis
9.5: Oxidative Phosphorylation

ATP yield
9.6: Oxidation of fatty acids

axial bond
3.2: Confirmations

B

base strenght
4.3: Acid-base reactions

bases
4.3: Acid-base reactions

basic amino acids
7.2: Amino acids

beeswax
6.2: Fatty acyls

Benedict's test
4.9: Reduction and oxidation (redox) reactions

bile salts
6.7: Sterols

biological translation
8.5: Translation-Protein Synthesis

birth control
6.7: Sterols

blood type
5.6: Oligosaccharides

bond formation
1.2: What is a chemical bond

brown fat
9.5: Oxidative Phosphorylation

C

cancer
8.6: Mutations and Genetic Diseases

capsid
8.7: Viruses

carbanion
1.5: Formal Charge

carbocation
1.5: Formal Charge

Carbohydrates
4.6: Nucleophilic Addition Reactions
5.1: What are carbohydrates

Carbon and Hydrogen as constituent of organic compounds

[1.1: What is organic chemistry?](#)

carboxylic acid

[2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom](#)

carboxylic acids

[4.5: Nucleophilic acyl substitution reactions](#)

carcinogens

[8.6: Mutations and Genetic Diseases](#)

Carnauba wax

[6.2: Fatty acyls](#)

catabolism

[9.1: Basics of metabolism](#)

Catabolism of glycerol

[9.6: Oxidation of fatty acids](#)

catalyst

[7.9: Enzymes](#)

catalytic reduction of aldehydes and ketones

[4.9: Reduction and oxidation \(redox\) reactions](#)

catalytic reduction of alkenes

[4.9: Reduction and oxidation \(redox\) reactions](#)

catalytic reduction of vegetable oils

[4.9: Reduction and oxidation \(redox\) reactions](#)

Cell Membrane

[6.8: Cell membrane](#)

cell structure

[9.1: Basics of metabolism](#)

cellobiose

[5.5: Disaccharides](#)

cellulose

[5.7: Polysaccharides](#)

cephalin

[6.4: Glycerophospholipids](#)

ceramide

[6.5: Sphingolipids](#)

cerebroside

[6.5: Sphingolipids](#)

chair conformation

[3.2: Confirmations](#)

Chaperones

[7.8: Protein misfolding and denaturation](#)

charge

[4.3: Acid-base reactions](#)

chiral centers

[3.3: Configurations](#)

chirality

[3.3: Configurations](#)

chitin

[5.7: Polysaccharides](#)

cholesterol

[6.7: Sterols](#)

[6.8: Cell membrane](#)

cholesterol transport in the body

[6.7: Sterols](#)

chymotripsin

[9.2: Digestion of food](#)

CIP rules

[3.3: Configurations](#)

cis fused rings

[3.2: Confirmations](#)

citrate

[9.4: Citric acid cycle](#)

citrate synthase

[9.1: Basics of metabolism](#)

citric acid cycle

[9.4: Citric acid cycle](#)

classification of proteins

[7.1: What are proteins?](#)

CoA

[9.1: Basics of metabolism](#)

codon

[8.4: Ribonucleic acid \(RNA\) and transcription](#)

coenzyme

[7.9: Enzymes](#)

Coenzyme A

[9.1: Basics of metabolism](#)

cofactor

[7.9: Enzymes](#)

combustion of fuels

[4.2: Free Radical Reactions](#)

comparison of organic and inorganic compounds

[1.2: What is a chemical bond](#)

Competitive inhibitors

[7.9: Enzymes](#)

Complementary base pairing

[8.3: Secondary structure and replication of DNA](#)

complex I

[9.5: Oxidative Phosphorylation](#)

complex II

[9.5: Oxidative Phosphorylation](#)

Complex III

[9.5: Oxidative Phosphorylation](#)

complex IV

[9.5: Oxidative Phosphorylation](#)

complex V

[9.5: Oxidative Phosphorylation](#)

condensation polymerization

[4.5: Nucleophilic acyl substitution reactions](#)

condensed formula

[1.4: Representing organic compounds](#)

configuration

[3.3: Configurations](#)

conformational isomers

[3.2: Confirmations](#)

Conformations

[3.2: Confirmations](#)

conformers

[3.1: Introduction to stereochemistry](#)

constitutional isomers

[3.1: Introduction to stereochemistry](#)

coordinate covalent bond

[1.2: What is a chemical bond](#)

[7.5: Tertiary structure of proteins](#)

coronavirus

[8.7: Viruses](#)

cortisol

[6.7: Sterols](#)

Cortisone

[6.7: Sterols](#)

covalent bond

[1.2: What is a chemical bond](#)

cyanohydrin

[4.6: Nucleophilic Addition Reactions](#)

cyclic chair conformation of pyranose form

[5.3: Cyclic structures of monosaccharides](#)

cyclic hemiacetal

[5.3: Cyclic structures of monosaccharides](#)

Cytochrome c

[9.5: Oxidative Phosphorylation](#)

cytochrome c oxidase

[9.5: Oxidative Phosphorylation](#)

cytoplasm

[9.1: Basics of metabolism](#)

cytosol

[9.1: Basics of metabolism](#)

D

D/L configurations

[7.2: Amino acids](#)

D/L stereodescriptors

[3.3: Configurations](#)

[5.2: General class names and Common names of monosaccharides](#)

dearboxylation

[4.10: Reactions with cyclic transition state](#)

deletion mutation

[8.6: Mutations and Genetic Diseases](#)

Denaturation

diastereomers

[3.3: Configurations](#)

diastereomers

[3.1: Introduction to stereochemistry](#)

dietary fats

[6.3: Glycerolipids](#)

diffusion

[6.8: Cell membrane](#)

digestion

[9.2: Digestion of food](#)

dihedral angle

[3.2: Confirmations](#)

dimethylallyl pyrophosphate

[6.6: Saccharolipids, polyketides, and prenols](#)

dinucleotide

[8.2: Primary structure of deoxyribonucleic acid \(DNA\)](#)

dipeptide

[7.3: Primary structure of proteins](#)

diphosphate

[8.1: Nucleotides -the building blocks of nucleic acids](#)

Disaccharide

[5.4: Reactions of monosaccharides](#)

[5.5: Disaccharides](#)

Disulfide Bond

[7.3: Primary structure of proteins](#)

disulfide bonds

[7.5: Tertiary structure of proteins](#)

disulfides

[2.3: Functional groups containing sp³-hybridized heteroatom](#)

diterpenes

[6.6: Saccharolipids, polyketides, and prenols](#)

DNA

[8.1: Nucleotides -the building blocks of nucleic acids](#)

[8.2: Primary structure of deoxyribonucleic acid \(DNA\)](#)

DNA ligase

[8.3: Secondary structure and replication of DNA](#)

DNA Polymerase

[8.3: Secondary structure and replication of DNA](#)

Double helix model of DNA

[8.3: Secondary structure and replication of DNA](#)

doxyribonucleic acid

[8.1: Nucleotides -the building blocks of nucleic acids](#)

E

eclipsed

3.2: Confirmations

effect of concentration

7.9: Enzymes

effect of leaving group

4.4: Nucleophilic substitution and elimination reactions

effect of pH

7.9: Enzymes

effect of solvent

4.4: Nucleophilic substitution and elimination reactions

effect of substrate

4.4: Nucleophilic substitution and elimination reactions

effect of temperature

7.9: Enzymes

electron transport

9.5: Oxidative Phosphorylation

Electron transport chain

9.5: Oxidative Phosphorylation

electrophiles

4.8: Electrophilic aromatic substitution reactions

electrophilic addition reactions

4.7: Electrophilic addition reactions

electrophilic aromatic substitution mechanism

4.8: Electrophilic aromatic substitution reactions

elementary reaction

4: Organic reactions

4.1: What is a reaction mechanism

Elimination bimolecular

4.4: Nucleophilic substitution and elimination reactions

Elimination unimolecular

4.4: Nucleophilic substitution and elimination reactions

enantiomers

3.1: Introduction to stereochemistry

3.3: Configurations

enzyme

7.9: Enzymes

epimers

5.2: General class names and Common names of monosaccharides

epoxides

2.3: Functional groups containing sp³-hybridized heteroatom

equatorial bond

3.2: Confirmations

essential amino acids

7.2: Amino acids

essential fatty acids

6.2: Fatty acyls

ester

2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

esters

4.5: Nucleophilic acyl substitution reactions

Estradiol

6.7: Sterols

Estrone

6.7: Sterols

ethane

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

ethene

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

ethers

2.3: Functional groups containing sp³-hybridized heteroatom

ethyne

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

F

F0c ring

9.5: Oxidative Phosphorylation

facilitated transport

6.8: Cell membrane

factors affecting acid strength

4.3: Acid-base reactions

Factors that affect SN₁, SN₂, E₁, and E₂ reactions

4.4: Nucleophilic substitution and elimination reactions

FAD

9.1: Basics of metabolism

FADH₂

9.1: Basics of metabolism

fats

6.3: Glycerolipids

fatty acids

6.2: Fatty acyls

fatty acyl

6.2: Fatty acyls

female sex hormones

6.7: Sterols

fermentation

9.3: Oxidation of glucose -the glycolysis

fingerprinting

8.8: Genetic engineering

Fisher projection

3.3: Configurations

5.3: Cyclic structures of monosaccharides

Fisher projections

5.1: What are carbohydrates

Flavin adenine dinucleotide

9.1: Basics of metabolism

flavin mononucleotide

9.5: Oxidative Phosphorylation

fluidity of lipid bilayers

6.4: Glycerophospholipids

formal charge

1.5: Formal Charge

free radical polymerization

4.2: Free Radical Reactions

free radical reaction mechanism

4.2: Free Radical Reactions

free radical reactions

4.2: Free Radical Reactions

fructofuranose

5.3: Cyclic structures of monosaccharides

fructose

4.10: Reactions with cyclic transition state

fumarate

9.4: Citric acid cycle

functional group

2.2: Functional group

functional group isomers

3.1: Introduction to stereochemistry

furanose form

5.3: Cyclic structures of monosaccharides

G

Gallstones

6.7: Sterols

ganglioside

6.5: Sphingolipids

gauche

3.2: Confirmations

gene

8.4: Ribonucleic acid (RNA) and transcription

general formula of carbohydrates

5.1: What are carbohydrates

genetic diseases

8.6: Mutations and Genetic Diseases

genetic engineering

8.8: Genetic engineering

genetic testing

8.8: Genetic engineering

germline mutation

8.6: Mutations and Genetic Diseases

glucocorticoids

6.7: Sterols

glucogenic

9.7: Degradation of amino acids

glucose

4.10: Reactions with cyclic transition state

glucoside

5.4: Reactions of monosaccharides

glucosidic bond

5.4: Reactions of monosaccharides

Glycerolipids

6.3: Glycerolipids

glycerophospholipids

6.4: Glycerophospholipids

glycogen

5.7: Polysaccharides

glycolysis

9.3: Oxidation of glucose -the glycolysis

glycosidic bond

4.6: Nucleophilic Addition Reactions

glycosidic linkage

5.5: Disaccharides

H

haloalkanes

2.3: Functional groups containing sp³-hybridized heteroatom

halogenation of alkanes

4.2: Free Radical Reactions

halogenation of benzene

4.8: Electrophilic aromatic substitution reactions

halonium ion

4.8: Electrophilic aromatic substitution reactions

hemiacetal

4.6: Nucleophilic Addition Reactions

hemiacetal forms of monosaccharides

4.10: Reactions with cyclic transition state

hemiacetals

4.6: Nucleophilic Addition Reactions

hemoglobin

7.6: Quaternary structure of proteins

heterolytic bond breaking and making

2.2: Functional group

4: Organic reactions

heterolytic cleavage

4.1: What is a reaction mechanism

high density lipoproteins HDL

6.7: Sterols

HIV

8.7: Viruses

holoenzyme

7.9: Enzymes

homolytic bond breaking and making

2.2: Functional group

4: Organic reactions

homolytic bond cleavage

4: Organic reactions

homolytic cleavage

4.1: What is a reaction mechanism

Howarth projection

5.3: Cyclic structures of monosaccharides

Human Genome

8.8: Genetic engineering

human immunodeficiency virus

8.7: Viruses

hybridization of carbon

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

hybridization of halogens

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

hybridization of nitrogen

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

hybridization of orbitals

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

hybridization of oxygen

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

hydrates

4.6: Nucleophilic Addition Reactions

hydration of alkenes

4.7: Electrophilic addition reactions

hydration of alkynes

4.7: Electrophilic addition reactions

hydrocarbons

2.1: Hydrocarbons

hydrogen bond

7.5: Tertiary structure of proteins

hydrogen bonding

1.2: What is a chemical bond

Hydrolases

7.9: Enzymes

hydrolysis of fats

6.3: Glycerolipids

hydrophilic

6.1: What are lipids?

7.2: Amino acids

hydrophilic amino acids

7.2: Amino acids

hydrophobic

6.1: What are lipids?

7.2: Amino acids

hydrophobic amino acids

7.2: Amino acids

hydrophobic interactions

7.5: Tertiary structure of proteins

I

imines

2.4: Functional groups containing sp²-hybridized heteroatom

inductive effect

4.3: Acid-base reactions

infant respiratory distress syndrome

6.4: Glycerophospholipids

information strand

8.4: Ribonucleic acid (RNA) and transcription

inhibitors

7.9: Enzymes

inner membrane

9.1: Basics of metabolism

insertion mutation

8.6: Mutations and Genetic Diseases

insulin

8.8: Genetic engineering

intermembrane space

9.1: Basics of metabolism

intermolecular forces

1.2: What is a chemical bond

ionic bond

1.2: What is a chemical bond

ionization of amines

4.3: Acid-base reactions

ionization of amino acids

7.2: Amino acids

ionization of carboxylic acids

4.3: Acid-base reactions

ionization of phosphates

4.3: Acid-base reactions

irreversible inhibitors

7.9: Enzymes

isoelectric point

7.2: Amino acids

Isoenzymes

7.9: Enzymes

Isomerases

7.9: Enzymes

isopentenyl pyrophosphate

6.6: Saccharolipids, polyketides, and prenols

IUPAC nomenclature

2.1: Hydrocarbons

2.4: Functional groups containing sp²-hybridized heteroatom

J

jaundice

6.7: Sterols

Jojoba wax

6.2: Fatty acyls

K

ketoacidosis

9.6: Oxidation of fatty acids

ketogenesis

9.6: Oxidation of fatty acids

ketogenic

9.7: Degradation of amino acids

Ketone bodies

9.6: Oxidation of fatty acids

ketones

2.4: Functional groups containing sp²-hybridized heteroatom

4.6: Nucleophilic Addition Reactions

ketoses

5.2: General class names and Common names of monosaccharides

ketosis

9.6: Oxidation of fatty acids

Krebs cycle

9.4: Citric acid cycle

L

lactase

9.2: Digestion of food

lactose

5.5: Disaccharides

lagging strand

8.3: Secondary structure and replication of DNA

leading strand

8.3: Secondary structure and replication of DNA

lecithin

6.4: Glycerophospholipids

Lewis acids

4.8: Electrophilic aromatic substitution reactions

Lewis formula

1.4: Representing organic compounds

Ligases

7.9: Enzymes

lipase

9.2: Digestion of food

lipid bilayer

6.4: Glycerophospholipids

lipids

6.1: What are lipids?

lithium aluminum hydride

4.9: Reduction and oxidation (redox) reactions

London dispersion forces

1.2: What is a chemical bond

low density lipoproteins LDL

6.7: Sterols

Lyases

7.9: Enzymes

M

major contributor

1.6: Resonance

malate

9.4: Citric acid cycle

malate dehydrogenase

9.1: Basics of metabolism

male sex hormones

6.7: Sterols

maltose

5.5: Disaccharides

matix

9.1: Basics of metabolism

meso

3.3: Configurations

messenger RNA

8.4: Ribonucleic acid (RNA) and transcription

metabolic pathways

9.1: Basics of metabolism

metabolism

9.1: Basics of metabolism

methane

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

mineralocorticoids

6.7: Sterols

minor contributor

1.6: Resonance

missense mutation

8.6: Mutations and Genetic Diseases

mitochondria

9.1: Basics of metabolism

models of enzyme action

7.9: Enzymes

molecular formula

1.4: Representing organic compounds

monopeptide

7.3: Primary structure of proteins

Monosaccharide

5.4: Reactions of monosaccharides

monosaccharides

5.1: What are carbohydrates

monosubstituted cyclohexanes

3.2: Confirmations

monoterpenes

6.6: Saccharolipids, polyketides, and prenols

monounsaturated fatty acids

6.2: Fatty acyls

mRNA

8.4: Ribonucleic acid (RNA) and transcription

Multiple sclerosis

6.5: Sphingolipids

mutarotation

5.3: Cyclic structures of monosaccharides

mutation

8.6: Mutations and Genetic Diseases

N

NAD⁺

4.9: Reduction and oxidation (redox) reactions

9.1: Basics of metabolism

NADH

4.9: Reduction and oxidation (redox) reactions

9.1: Basics of metabolism

NADH dehydrogenase

9.5: Oxidative Phosphorylation

Nicotinamide adenine dinucleotide

4.9: Reduction and oxidation (redox) reactions

9.1: Basics of metabolism

nitration of benzene

4.8: Electrophilic aromatic substitution reactions

nitrile

2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

nitrogen bases

8.1: Nucleotides -the building blocks of nucleic acids

nitronium ion

4.8: Electrophilic aromatic substitution reactions

Nomenclature of glycosidic linkage

5.5: Disaccharides

nomenclature of monosaccharides

5.2: General class names and Common names of monosaccharides

Noncompetitive inhibitors

7.9: Enzymes

nonsense mutation

8.6: Mutations and Genetic Diseases

ntegral proteins

6.8: Cell membrane

Nucleic acid

8.1: Nucleotides -the building blocks of nucleic acids

8.2: Primary structure of deoxyribonucleic acid (DNA)

nucleophilic acyl substitution

4.5: Nucleophilic acyl substitution reactions

nucleophilic addition reactions

4.6: Nucleophilic Addition Reactions

Nucleophilic substitution bimolecular

4.4: Nucleophilic substitution and elimination reactions

Nucleophilic substitution unimolecular

4.4: Nucleophilic substitution and elimination reactions

nucleoside

8.1: Nucleotides -the building blocks of nucleic acids

nucleotide

8.1: Nucleotides -the building blocks of nucleic acids

nucleus

9.1: Basics of metabolism

O

oils

6.3: Glycerolipids

Okazaki fragment

8.3: Secondary structure and replication of DNA

oligonucleotide

8.2: Primary structure of deoxyribonucleic acid (DNA)

oligosaccharide

5.4: Reactions of monosaccharides

5.6: Oligosaccharides

omega fatty acids

6.2: Fatty acyls

optical activity

3.3: Configurations

organelle

9.1: Basics of metabolism

organic compounds

1.1: What is organic chemistry?

organic radical

1.5: Formal Charge

outer membrane

9.1: Basics of metabolism

oxaloacetate

9.4: Citric acid cycle

9.7: Degradation of amino acids

oxidation

4.9: Reduction and oxidation (redox) reactions

9.1: Basics of metabolism

oxidation number

4.9: Reduction and oxidation (redox) reactions

oxidation of alcohols

4.9: Reduction and oxidation (redox) reactions

Oxidation of aldehydes

4.9: Reduction and oxidation (redox) reactions

oxidation of thiols

4.9: Reduction and oxidation (redox) reactions

oxidative deamination

9.7: Degradation of amino acids

oxidative phosphorylation

9.5: Oxidative Phosphorylation

Oxidoreductases

7.9: Enzymes

P

partial hydrogen of fats

6.3: Glycerolipids

passive transport

6.8: Cell membrane

Pepsin

9.2: Digestion of food

Peptide bond

7.3: Primary structure of proteins

peptide elongation

8.5: Translation-Protein Synthesis

peripheral proteins

6.8: Cell membrane

peroxide

9.5: Oxidative Phosphorylation

peroxides

2.3: Functional groups containing sp³-hybridized heteroatom

perspective drawing

3.3: Configurations

pH

4.3: Acid-base reactions

phospahte

8.1: Nucleotides -the building blocks of nucleic acids

phosphate esters

2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

phospholipid bilayer

6.8: Cell membrane

phosphoric acid anhydrides

2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

phosphoric acid

2.5: Functional groups containing mix of sp³- and sp²-, or sp-hybridized heteroatom

Phosphorylation

9.1: Basics of metabolism

physical properties

2.3: Functional groups containing sp³-hybridized heteroatom

pKa

4.3: Acid-base reactions

pKb

4.3: Acid-base reactions

point mutation

8.6: Mutations and Genetic Diseases

polarity of carbonyl groups

2.4: Functional groups containing sp²-hybridized heteroatom

polyamides

4.5: Nucleophilic acyl substitution reactions

polyesters

4.5: Nucleophilic acyl substitution reactions

polyketides

6.6: Saccharolipids, polyketides, and prenols

polymerase chain reaction (PCR)

8.8: Genetic engineering

polynucleotide

8.2: Primary structure of deoxyribonucleic acid (DNA)

Polypeptide

7.3: Primary structure of proteins

polysaccharide

5.4: Reactions of monosaccharides

polysaccharides

5.1: What are carbohydrates

polyunsaturated fatty acids

6.2: Fatty acyls

polyurethanes

4.5: Nucleophilic acyl substitution reactions

positional isomers

3.1: Introduction to stereochemistry

prenols

6.6: Saccharolipids, polyketides, and prenos

primary structure of nucleic acid

8.2: Primary structure of deoxyribonucleic acid (DNA)

primary structure of proteins

7.7: Summary of protein structure levels

primary, secondary, tertiary, and quaternary designations

2.3: Functional groups containing sp³-hybridized heteroatom

prions

7.8: Protein misfolding and denaturation

progesterone

6.7: Sterols

prostaglandins

6.2: Fatty acyls

protein

7.1: What are proteins?

protein misfolding

7.8: Protein misfolding and denaturation

protein's primary structure

7.3: Primary structure of proteins

protein's quaternary structure

7.6: Quaternary structure of proteins

Protein's secondary structure

7.4: Secondary structure of proteins

protein's structure levels

7.7: Summary of protein structure levels

Protein's tertiary structure

7.5: Tertiary structure of proteins

proteinogenic amino acids

7.2: Amino acids

provirus

8.7: Viruses

purine

8.1: Nucleotides -the building blocks of nucleic acids

pyranose form

5.3: Cyclic structures of monosaccharides

pyrimidine

8.1: Nucleotides -the building blocks of nucleic acids

Pyruvate

9.3: Oxidation of glucose -the glycolysis

Q

quaternary structure of proteins

7.7: Summary of protein structure levels

R

R/S configuration

3.3: Configurations

R/S stereodescriptors

3.3: Configurations

racemic mixture

3.3: Configurations

radical scavengers

4.2: Free Radical Reactions

radicals in aging process

4.2: Free Radical Reactions

random coil

7.4: Secondary structure of proteins

reaction mechanism

4: Organic reactions

4.1: What is a reaction mechanism

Reactions of alcohols

4.4: Nucleophilic substitution and elimination reactions

reactions of amines

4.4: Nucleophilic substitution and elimination reactions

Reactions of ethers

4.4: Nucleophilic substitution and elimination reactions

reactions of thiols

4.4: Nucleophilic substitution and elimination reactions

reactive oxygen species

9.5: Oxidative Phosphorylation

recombinant DNA

8.8: Genetic engineering

Redox

4.9: Reduction and oxidation (redox) reactions

reducing sugars

5.4: Reactions of monosaccharides

reduction

4.9: Reduction and oxidation (redox) reactions

9.1: Basics of metabolism

reduction of aldehydes

4.9: Reduction and oxidation (redox) reactions

reduction of disulfides

4.9: Reduction and oxidation (redox) reactions

reduction of ketones

4.9: Reduction and oxidation (redox) reactions

regioselectivity

4.7: Electrophilic addition reactions

relative sweetness

5.5: Disaccharides

replication of DNA

8.3: Secondary structure and replication of DNA

resonance

1.6: Resonance

4.3: Acid-base reactions

resonance contributor

1.6: Resonance

resonance hybrid

1.6: Resonance

resonance stabilization

1.6: Resonance

retrovirus

8.7: Viruses

reverse transcription

8.7: Viruses

ribonucleic acid

8.1: Nucleotides -the building blocks of nucleic acids

8.4: Ribonucleic acid (RNA) and transcription

ribosomal RNA

8.4: Ribonucleic acid (RNA) and transcription

ring flip reaction of cyclohexanes

3.2: Confirmations

RNA

8.1: Nucleotides -the building blocks of nucleic acids

8.2: Primary structure of deoxyribonucleic acid (DNA)

8.4: Ribonucleic acid (RNA) and transcription

RNA primer

8.3: Secondary structure and replication of DNA

rRNA

8.4: Ribonucleic acid (RNA) and transcription

S

saccharolipids

6.6: Saccharolipids, polyketides, and prenos

salt bridge

7.5: Tertiary structure of proteins

saponification

6.3: Glycerolipids

saturated fats

6.3: Glycerolipids

Secondary structure of DNA

8.3: Secondary structure and replication of DNA

secondary structure of proteins

7.7: Summary of protein structure levels

selective reactions

7.9: Enzymes

sesquiterpenes

6.6: Saccharolipids, polyketides, and prenos

sickle cell anemia

7.3: Primary structure of proteins

silent mutation

8.6: Mutations and Genetic Diseases

silver mirror test

5.4: Reactions of monosaccharides

skeletal formula

1.4: Representing organic compounds

skeletal isomers

3.1: Introduction to stereochemistry

snake venom

6.4: Glycerophospholipids

sodium borohydride

4.9: Reduction and oxidation (redox) reactions

somatic mutation

8.6: Mutations and Genetic Diseases

sp hybridization

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

sp² hybridization

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

sp³ hybridization

1.3: Hybridization of orbitals and 3D structures of simple organic compounds

specific rotation

3.3: Configurations

Spermaceti

6.2: Fatty acyls

Sphingolipids

6.5: Sphingolipids

sphingomyelin

6.5: Sphingolipids

sphingosine

6.5: Sphingolipids

spike proteins

8.7: Viruses

squalene

6.6: Saccharolipids, polyketides, and prenos

Stage 1 of food catabolism

9.2: Digestion of food

stages of food catabolism

9.1: Basics of metabolism

staggered

3.2: Confirmations

Starch

5.7: Polysaccharides

steroids

6.7: Sterols

stereoselectivity

4.7: Electrophilic addition reactions

stereospecific reactions

4.7: Electrophilic addition reactions

7.9: Enzymes

steric strain

[3.2: Confirmations](#)

stereoisomers

[3.1: Introduction to stereochemistry](#)

Steroid hormones

[6.7: Sterols](#)

Sterols

[6.7: Sterols](#)

sticky ends

[8.8: Genetic engineering](#)

strong and poor nucleophiles

[4.4: Nucleophilic substitution and elimination reactions](#)

substrate

[7.9: Enzymes](#)

succinate

[9.4: Citric acid cycle](#)

succinate dehydrogenase

[9.5: Oxidative Phosphorylation](#)

Sucrase

[9.2: Digestion of food](#)

sucrose

[5.5: Disaccharides](#)

sulfides

[2.3: Functional groups containing sp³-hybridized heteroatom](#)

sulfonation of benzene

[4.8: Electrophilic aromatic substitution reactions](#)

superoxide

[9.5: Oxidative Phosphorylation](#)

synthesis of nucleic acid

[8.2: Primary structure of deoxyribonucleic acid \(DNA\)](#)

T

tautomerization

[4.7: Electrophilic addition reactions](#)

template strand

[8.4: Ribonucleic acid \(RNA\) and transcription](#)

terpenoids

[6.6: Saccharolipids, polyketides, and prenols](#)

tertiary structure of proteins

[7.7: Summary of protein structure levels](#)

testosterone

[6.7: Sterols](#)

thermal cracking

[4.2: Free Radical Reactions](#)

thiols

[2.3: Functional groups containing sp³-hybridized heteroatom](#)

Tollens's test

[4.9: Reduction and oxidation \(redox\) reactions](#)

tortional angle

[3.2: Confirmations](#)

trans fats

[6.3: Glycerolipids](#)

trans fused rings

[3.2: Confirmations](#)

Transamination

[9.7: Degradation of amino acids](#)

transcription

[8.4: Ribonucleic acid \(RNA\) and transcription](#)

transfer RNA

[8.4: Ribonucleic acid \(RNA\) and transcription](#)

Transferases

[7.9: Enzymes](#)

translocation

[8.5: Translation-Protein Synthesis](#)

tricarboxylic acid cycle

[9.4: Citric acid cycle](#)

triglyceride

[6.3: Glycerolipids](#)

tripeptide

[7.3: Primary structure of proteins](#)

triphosphate

[8.1: Nucleotides -the building blocks of nucleic acids](#)

triple helix

[7.4: Secondary structure of proteins](#)

tRNA

[8.4: Ribonucleic acid \(RNA\) and transcription](#)

translation

[8.5: Translation-Protein Synthesis](#)

Trypsin

[9.2: Digestion of food](#)

U

ubiquinone

[9.5: Oxidative Phosphorylation](#)

uncouplers

[9.5: Oxidative Phosphorylation](#)

universal blood acceptor

[5.6: Oligosaccharides](#)

universal blood donor

[5.6: Oligosaccharides](#)

unsaturated fats

[6.3: Glycerolipids](#)

Unsaturated fatty acids

[6.2: Fatty acyls](#)

[9.6: Oxidation of fatty acids](#)

Urea cycle

[9.7: Degradation of amino acids](#)

V

viral infection

[8.7: Viruses](#)

virus

[8.7: Viruses](#)

virus particle

[8.7: Viruses](#)

W

Watson and Crick's model of DNA

[8.3: Secondary structure and replication of DNA](#)

Waxes

[6.2: Fatty acyls](#)
