

CHAPTER OVERVIEW

14: Lipids

The lipids are a large and diverse group of naturally occurring organic compounds that are related by their solubility in nonpolar organic solvents (e.g., ether, chloroform, acetone and benzene) and general insolubility in water. There is great structural variety among the lipids, as will be demonstrated in the following sections.

[14.1: Prelude to Lipids](#)

[14.2: Fatty Acids](#)

[14.3: Fats and Oils](#)

[14.4: Membranes and Membrane Lipids](#)

[14.5: Steroids](#)

[14.E: Exercises](#)

[14.S: Lipids \(Summary\)](#)
