 - Front Matter - [Undeclared](#)
 - [TitlePage](#) - [Undeclared](#)
 - [InfoPage](#) - [Undeclared](#)
 - [Table of Contents](#) - [Undeclared](#)
 - [Licensing](#) - [Undeclared](#)
 - 1: Gases and Equations of State - [Undeclared](#)
 - [1.1: The language of measurement in physical chemistry](#) - [Undeclared](#)
 - [1.2: The Zeroth Law of Thermodynamics](#) - [CC BY-NC-SA 4.0](#)
 - [1.3: The meaning and measurement of temperature](#) - [Undeclared](#)
 - [1.4: The Average Translational Kinetic Energy of a Gas](#) - [CC BY-NC-SA 4.0](#)
 - [1.5: The Gaussian Distribution of One Component of the Molecular Velocity](#) - [CC BY-NC-SA 4.0](#)
 - [1.6: The Distribution of Molecular Speeds is Given by the Maxwell-Boltzmann Distribution](#) - [CC BY-NC-SA 4.0](#)
 - [1.7: The Frequency of Collisions with a Wall](#) - [CC BY-NC-SA 4.0](#)
 - [1.8: The Maxwell-Boltzmann Distribution Has Been Verified Experimentally](#) - [CC BY-NC-SA 4.0](#)
 - [1.9: The Perfect Gas](#) - [Undeclared](#)
 - [1.10: Ideal vs. real gases and the van der Waals equation](#) - [Undeclared](#)
 - [1.11: Another way of dealing with real gases- the virial equation](#) - [Undeclared](#)
 - [1.12: Connecting the van der Waals and the virial equations- the Boyle temperature](#) - [Undeclared](#)
 - [1.13: The ideal gas law, functions and derivatives](#) - [Undeclared](#)
 - [1.14: Functions of Two Independent Variables](#) - [CC BY-NC-SA 4.0](#)
 - [1.15: The Equation of State](#) - [CC BY-NC-SA 4.0](#)
 - [1.16: Compressibility and Expansivity](#) - [CC BY-NC-SA 4.0](#)
 - [1.17: The Total Differential](#) - [CC BY-NC-SA 4.0](#)
 - [1.18: Exact and Inexact Differentials](#) - [CC BY-NC-SA 4.0](#)
 - 2: Work, Heat, and the First Law - [Undeclared](#)
 - [2.1: Overview of Classical Thermodynamics](#) - [CC BY-NC-SA 4.0](#)
 - [2.2: Pressure-Volume Work](#) - [CC BY 4.0](#)
 - [2.3: Work and Heat are not State Functions](#) - [CC BY-NC-SA 4.0](#)
 - [2.4: Internal Energy](#) - [Undeclared](#)
 - [2.5: Enthalpy](#) - [Undeclared](#)
 - [2.6: Thermochemistry](#) - [Undeclared](#)
 - [2.7: Measuring Heat](#) - [CC BY-SA 4.0](#)
 - [2.8: The Joule Experiment](#) - [CC BY-NC-SA 4.0](#)
 - [2.9: The Joule-Thomson Effect](#) - [CC BY-NC-SA 4.0](#)
 - [2.10: Adiabatic Changes](#) - [Undeclared](#)
 - 3: Entropy and the Second and Third Laws - [Undeclared](#)
 - [3.1: Introduction to the Second Law](#) - [CC BY-NC-SA 4.0](#)
 - [3.2: Heat Engines and the Carnot Cycle](#) - [CC BY-NC-SA 4.0](#)
 - [3.3: Entropy](#) - [CC BY-NC-SA 4.0](#)
 - [3.4: The Second Law of Thermodynamics](#) - [Undeclared](#)
 - [3.5: Calculating Entropy Changes](#) - [CC BY-NC-SA 4.0](#)
 - [3.6: Comparing the System and the Surroundings](#) - [CC BY-NC-SA 4.0](#)
 - [3.7: Heat Capacity as a Function of Temperature](#) - [CC BY-SA 4.0](#)

- 3.8: The Third Law - CC BY-SA 4.0
- 3.9: Absolute Entropy - CC BY-SA 4.0
- 3.10: Evaluating Entropy Changes Using Thermochemical Cycles - CC BY-SA 4.0
- 4: State Functions in Thermodynamics - *Undeclared*
 - 4.1: Free Energy Functions - CC BY-NC-SA 4.0
 - 4.2: ΔA , ΔG , and Maximum Work - CC BY-NC-SA 4.0
 - 4.3: Gibbs Energy Determines the Direction of Spontaneity at Constant Pressure and Temperature - CC BY-NC-SA 4.0
 - 4.4: The Maxwell Relations - CC BY-NC-SA 4.0
 - 4.5: Volume Dependence of Helmholtz Energy - CC BY-NC-SA 4.0
 - 4.6: Pressure Dependence of Gibbs Energy - CC BY-NC-SA 4.0
 - 4.7: Temperature Dependence of A and G - CC BY-NC-SA 4.0
 - 4.8: The Enthalpy of an Ideal Gas is Independent of Pressure - *Undeclared*
 - 4.9: When Two Variables Change at Once - CC BY-NC-SA 4.0
- 5: Single Component Phase Equilibrium - *Undeclared*
 - 5.1: Gibbs Energies and Phase Diagrams - *Undeclared*
 - 5.2: Chemical Potential and Fugacity - CC BY 4.0
 - 5.3: The Gibbs-Duhem Equation - CC BY-NC-SA 4.0
 - 5.4: Criterion for Phase Equilibrium - CC BY-NC-SA 4.0
 - 5.5: A Phase Diagram Summarizes the Solid-Liquid-Gas Behavior of a Substance - *Undeclared*
 - 5.6: The Clapeyron Equation - CC BY-NC-SA 4.0
 - 5.7: The Clausius-Clapeyron Equation - CC BY-NC-SA 4.0
- 6: Multiple Component Phase Equilibrium - *Undeclared*
 - 6.1: Thermodynamics of Mixing - *Undeclared*
 - 6.2: Partial Molar Volume - CC BY-NC-SA 4.0
 - 6.3: Chemical Potential - CC BY-NC-SA 4.0
 - 6.4: Non-ideality in Gases - Fugacity - CC BY-NC-SA 4.0
 - 6.5: A Mixture is a Combination of Two or More Substances - CC BY-NC-SA 4.0
 - 6.6: The Gibbs-Duhem Equation Relates Chemical Potential and Composition at Equilibrium - CC BY-NC-SA 4.0
 - 6.7: Chemical Potential of Each Component Has the Same Value in Each Phase in Which the Component Appears - *Undeclared*
 - 6.8: Colligative Properties - CC BY-SA 4.0
 - 6.9: Osmotic Pressure can Determine Molecular Masses - CC BY-NC-SA 4.0
- 6.10: Raoult's Law and Phase Diagrams of Ideal Solutions - CC BY-SA 4.0
- 6.11: Fractional Distillation of Ideal Mixtures - CC BY-NC 4.0
- 6.12: Most Solutions are Not Ideal - CC BY-NC-SA 4.0
- 6.13: Phase Diagrams of Non-Ideal Solutions - CC BY-SA 4.0
- 6.14: Fractional Distillation of Non-ideal Mixtures (Azeotropes) - CC BY-NC 4.0
- 6.15: Activity - CC BY-SA 4.0
- 7: Chemical Equilibrium - *Undeclared*
 - 7.1: Equilibrium Results when Gibbs Energy is Minimized - CC BY-NC-SA 4.0
 - 7.2: Reaction Quotient and Equilibrium Constant - CC BY-SA 4.0
 - 7.3: An Equilibrium Constant is a Function of Temperature Only - CC BY-NC-SA 4.0
 - 7.4: Pressure Dependence of K_p - Le Châtelier's Principle - CC BY-NC-SA 4.0
 - 7.5: Degree of Dissociation - CC BY-NC-SA 4.0
 - 7.6: The Dumas Bulb Method for Measuring Decomposition Equilibrium - CC BY-NC-SA 4.0
 - 7.7: Gibbs Energy of a Reaction vs. Extent of Reaction is a Minimum at Equilibrium - CC BY 4.0
 - 7.8: The Sign of ΔG and not ΔG° Determines the Direction of Reaction Spontaneity - CC BY-NC-SA 4.0
 - 7.9: Reaction Quotient and Equilibrium Constant Ratio Determines Reaction Direction - CC BY 4.0
 - 7.10: The van 't Hoff Equation - CC BY-NC-SA 4.0
- 8: Electrochemistry - *Undeclared*
 - 8.1: Electrolytes Solutions are Nonideal at Low Concentrations - CC BY-NC-SA 4.0
 - 8.2: The Debye-Hückel Theory - CC BY-NC-SA 4.0
 - 8.3: Extending Debye-Hückel Theory to Higher Concentrations - CC BY-SA 4.0
 - 8.4: Electricity - CC BY-NC-SA 4.0
 - 8.5: The connection to ΔG - CC BY-NC-SA 4.0
 - 8.6: Half Cells and Standard Reduction Potentials - CC BY-NC-SA 4.0
 - 8.7: Entropy of Electrochemical Cells - CC BY-NC-SA 4.0
 - 8.8: The Nernst Equation - CC BY 4.0
 - 8.9: Evaluation of the Standard Cell Potential - CC BY 4.0
- 9: Chemical Kinetics - *Undeclared*
 - 9.1: The Time Dependence of a Chemical Reaction is Described by a Rate Law - *Undeclared*
 - 9.2: The Method of Initial Rates - CC BY-NC-SA 4.0

- 9.3: Rate Laws Must Be Determined Experimentally - CC BY-NC-SA 4.0
- 9.4: First-Order Reactions Show an Exponential Decay of Reactant Concentration with Time - CC BY-NC-SA 4.0
- 9.5: Different Rate Laws Predict Different Kinetics - CC BY-NC-SA 4.0
- 9.6: The Method of Half-Lives - CC BY-NC-SA 4.0
- 9.7: Complex Rate Laws - CC BY-SA 4.0
- 9.8: Reaction Mechanisms - CC BY-NC-SA 4.0
- 9.9: The Connection between Reaction Mechanisms and Reaction Rate Laws - CC BY-NC-SA 4.0
- 9.10: The Rate Determining Step Approximation - CC BY-NC-SA 4.0
- 9.11: The Steady-State Approximation - CC BY-NC-SA 4.0
- 9.12: The Equilibrium Approximation - CC BY-NC-SA 4.0
- 9.13: Arrhenius Equation - CC BY 4.0
- 9.14: Collisions with Other Molecules - CC BY-NC-SA 4.0
- 9.15: Mean Free Path - CC BY-NC-SA 4.0
- 9.16: Collision Theory - CC BY-NC-SA 4.0
- 9.17: Basics of Reaction Profiles - CC BY-NC-SA 4.0
- 9.18: RK3. Activation Barriers - CC BY-NC 3.0
- 9.19: Eyring equation - CC BY-NC-SA 4.0
- 10: Complex Reaction Kinetics - *Undeclared*
 - 10.1: The Lindemann Mechanism - *Undeclared*
 - 10.2: Some Reaction Mechanisms Involve Chain Reactions - *Undeclared*
 - 10.3: Catalysis - CC BY-NC-SA 4.0
 - 10.4: The Michaelis-Menten Mechanism - CC BY-NC-SA 4.0
 - 10.5: Isotherms are Plots of Surface Coverage as a Function of Gas Pressure at Constant Temperature - CC BY-NC-SA 4.0
 - 10.6: Atoms and Molecules can Physisorb or Chemisorb to a Surface - CC BY-NC-SA 4.0
 - 10.7: Using Langmuir Isotherms to Derive Rate Laws for Surface-Catalyzed Gas-Phase Reactions - CC BY-NC-SA 4.0
 - 10.8: The Structure of a Surface is Different from that of a Bulk Solid - CC BY-NC-SA 4.0
 - 10.9: The Haber-Bosch Reaction Can Be Surface Catalyzed - CC BY-NC-SA 4.0
 - 10.10: Fluorescence - CC BY 4.0
