

## 6.6: Content in Context

---

In this unit, we'll explore how chemistry helps us understand the composition of the air around us and the effects of pollutants on our health and environment. Now that you've learned to name chemical compounds, we'll apply that knowledge by identifying common air pollutants such as carbon monoxide, sulfur dioxide, and nitrogen oxides. Understanding their chemical properties will help us investigate where these pollutants come from and how they impact the world we live in.
