## cyclic ethers

- 4.1: Introduction
- 4.6: Cyclic Ethers - Epoxides

## cycloaddition

- 15.7: Stereochemistry of Cycloadditions

## cyclobutadienyl ring

- 2.4: Aromaticity and the Hückel  $4n + 2$  Rule

## cyclopentadiene ion

- 2.5: Aromatic Ions

## cyclopentadienyl ring

- 2.4: Aromaticity and the Hückel  $4n + 2$  Rule

## cyclopropenyl ring

- 2.4: Aromaticity and the Hückel  $4n + 2$  Rule

## D

### D sugar

- 11.4: D, L Sugars

### degenerate

- 2.3: Structure and Stability of Benzene

### deoxy sugar

- 11.11: Other Important Carbohydrates

### deoxyribonucleic acid

- 14.2: Nucleotides and Nucleic Acids

### diamagnetic anisotropy

- 2.8: Spectroscopy of Aromatic Compounds

### Dieckmann Cyclization

- 9.10: Intramolecular Claisen Condensations - The Dieckmann Cyclization

### diene

- 1.1: Introduction

### dienophile

- 1.6: Characteristics of the Diels-Alder Reaction
- 15.6: Cycloaddition Reactions

### dimerization

- 1.6: Characteristics of the Diels-Alder Reaction

### Disaccharide

- 11.2: Classification of Carbohydrates
- 11.9: Disaccharides

### disubstituted benzenes

- 2.2: Naming Aromatic Compounds

### DNA

- 14.2: Nucleotides and Nucleic Acids

### DNA sequencing

- 14.7: DNA Sequencing

### DNA Sequencing

- 14.7: DNA Sequencing

### DNA synthesis

- 14.8: DNA Synthesis

## E

### Edman degradation

- 12.7: The Edman Degradation

### eicosanoids

- 13.5: Prostaglandins and Other Eicosanoids

### elastomers

- 16.7: Polymer Structure and Physical Properties

### electrocyclic reactions

- 15.3: Electrocyclic Reactions

### Electrophilic Aromatic Substitution Reactions

- 3.2: Electrophilic Aromatic Substitution Reactions - Bromination

### electrophilic substitution

- 3.1: Introduction

### electrophoresis

- 12.3: Amino Acids, the Henderson-Hasselbalch Equation, and Isoelectric Points

### enamine

- 5.9: Nucleophilic Addition of Amines - Imine and Enamine Formation

### enantioselective synthesis

- 12.4: Synthesis of Amino Acids

### enol

- 8.2: Keto-Enol Tautomerism

### enolate ion

- 8.2: Keto-Enol Tautomerism

### enone

- 1.1: Introduction

### enones

- 9.4: Dehydration of Aldol Products - Synthesis of Enones

### enzyme

- 12.11: Enzymes and Coenzymes

### epoxides

- 4.6: Cyclic Ethers - Epoxides

### esters

- 7.7: Chemistry of Esters

### ether

- 4.1: Introduction

### ethers

- 4.2: Names and Properties of Ethers
- 4.10: Spectroscopy of Ethers

## F

### fats

- 13.2: Waxes, Fats, and Oils

### Fischer projection

- 11.3: Depicting Carbohydrate Stereochemistry - Fischer Projections

### frontier molecular orbital theory

- 15.2: Molecular Orbitals of Conjugated Pi Systems

## G

### Gabriel synthesis

- 10.7: Synthesis of Amines

### glycoproteins

- 11.12: Cell-Surface Carbohydrates and Influenza Viruses

### graft copolymers

- 16.4: Copolymers

### Grignard reagents

- 5.8: Nucleophilic Addition of Hydride and Grignard Reagents - Alcohol Formation

## H

### Hückel's rule

- 2.4: Aromaticity and the Hückel  $4n + 2$  Rule

### haloform reaction

- 8.7: Reactivity of Enolate Ions

### halogenation

- 3.1: Introduction

### hemiacetal

- 5.11: Nucleophilic Addition of Alcohols - Acetal Formation
- 11.6: Cyclic Structures of Monosaccharides - Anomers

### heterocycles

- 2.6: Aromatic Heterocycles - Pyridine and Pyrrole

### Hofmann Elimination

- 10.8: Reactions of Amines

### Hofmann rearrangement

- 10.7: Synthesis of Amines

### HOMO

- 15.2: Molecular Orbitals of Conjugated Pi Systems

### HOMO–LUMO gap

- 15.2: Molecular Orbitals of Conjugated Pi Systems

### Hormones

- 13.7: Steroids

### hydrazine

- 5.10: Nucleophilic Addition of Hydrazine - The Wolff-Kishner Reaction

### hydroxylation

- 3.1: Introduction

## I

### imide

- 10.7: Synthesis of Amines

### Imine

- 5.9: Nucleophilic Addition of Amines - Imine and Enamine Formation

### inductive effect

- 6.5: Substituent Effects on Acidity

### intramolecular aldol reaction

- 9.7: Intramolecular Aldol Reactions

### intramolecular claisen condensation

- 9.10: Intramolecular Claisen Condensations - The Dieckmann Cyclization

### invert sugar

- 11.9: Disaccharides

### isoelectric point

- 12.3: Amino Acids, the Henderson-Hasselbalch Equation, and Isoelectric Points

### isoprene rule

- 13.6: Terpenoids

### isotactic polymer

- 16.3: Stereochemistry of Polymerization - Ziegler-Natta Catalysts

## K

### keto

- 8.2: Keto-Enol Tautomerism

### ketone nomenclature

- 5.2: Naming Aldehydes and Ketones

### ketose

- 11.2: Classification of Carbohydrates

### kinetic control

- 1.4: Kinetic vs. Thermodynamic Control of Reactions

## L

### lactone

- 7.7: Chemistry of Esters

### Lindlar's catalyst

- 4.6: Cyclic Ethers - Epoxides

### LUMO

- 15.2: Molecular Orbitals of Conjugated Pi Systems

## M

### McLafferty rearrangement

- 5.15: Spectroscopy of Aldehydes and Ketones

### Meisenheimer complex

- 3.8: Nucleophilic Aromatic Substitution

### Merrifield synthesis

- 12.9: The Merrifield Solid-Phase Technique

### messenger RNA

- 14.5: Transcription of DNA

### Michael addition

- 9.11: Conjugate Carbonyl Additions - The Michael Reaction

### mixed aldol reactions

- 9.6: Mixed Aldol Reactions

molar absorptivity

1.8: Structure Determination in Conjugated Systems - Ultraviolet Spectroscopy

**Monosaccharide**

11.2: Classification of Carbohydrates

**monosaccharides**

11.7: Reactions of Monosaccharides

**morphology**

16.7: Polymer Structure and Physical Properties

## N

**Ninhydrin reaction**

12.6: Amino Acid Analysis of Peptides

**nitration**

3.1: Introduction

**nitriles**

6.2: Naming Carboxylic Acids and Nitriles

6.8: Chemistry of Nitriles

**nitrogen rule**

10.11: Spectroscopy of Amines

**nitronium ion**

3.3: Other Aromatic Substitutions

**nucleophilic acyl substitution**

5.13: Biological Reductions

**nucleophilic aromatic substitution**

3.8: Nucleophilic Aromatic Substitution

**nucleosides**

14.2: Nucleotides and Nucleic Acids

**nucleotides**

14.2: Nucleotides and Nucleic Acids

## O

**oils**

13.2: Waxes, Fats, and Oils

**Okazaki fragments**

14.4: Replication of DNA
