CHAPTER OVERVIEW

2: Atomic Structure

2.1: The de Broglie-Bohr Model for the Hydrogen Atom
2.2: The de Broglie-Bohr Model for the Hydrogen Atom - Version 3
2.3: The de Broglie-Bohr Model for the Hydrogen Atom - Version 3
2.4: A de Broglie-Bohr Model for Positronium
2.5: The de Broglie-Bohr Model for the Hydrogen Atom - Version 4
2.6: The de Broglie-Bohr Model for a Hydrogen Atom Held Together by a Gravitational Interaction
2.7: The de Broglie-Bohr Model for Positronium
2.8: The Bohr Model for the Earth-Sun System
2.9: Extracting Atomic and Molecular Parameters from the deBroglie-Bohn Model for the Atom
2.10: Electronic Structure and the Superposition Principle
2.11: Atomic Spectroscopy and the Correspondence Principle
2.12: Hydrogen-Like Calculations with Variable Lepton Mass
2.13: Atomic Stability
2.14: Quantum Mechanical Calculations for the One-Dimensional Hydrogen Atom
2.15: Quantum Mechanical Calculations for the Hydrogen Atom
2.16: Atomic Stability
2.17: Atomic Stability - Mathcad Version
2.18: 110. Critique of the Centrifugal Effect in the Hydrogen Atom
2.19: A Shorter Critique of the Centrifugal Effect in the Hydrogen Atom
2.20: Exploring the Role of Lepton Mass in the Hydrogen Atom
2.21: The Effect of Lepton Mass on the Energy and Bond Length of the Hydrogen Molecule Ion
2.22: The Hydrogen Atom with Finite Sized Nucleus
2.23: The Hyperfine Interaction in the Hydrogen Atom
2.24: Positronium Annihilation
2.25: Positronium Annihilation- Another View
2.26: Positronium Annihilation- Yet Another View
2.27: The Hyperfine Interaction in the Deutrium Atom
2.28: A Tensor Algebra Approach to Spin-Orbit Coupling
2.29: A Bohr Model for Multi-electron Atoms and Ions
2.30: Atomic Variational Calculations- Hydrogen to Boron
2.31: Some Calculations on the Lithium Atom Ground State
2.32: E. B. Wilson's Calculation on the Lithium Atom Ground State
2.33: The Importance of the Pauli Principle
2.34: Splitting the 2s-2p Degeneracy in the Lithium Atom
2.35: Addition of Spin Angular Momentum- A Tensor Algebra Approach
2.36: Hund's Rule
2.37: Hund's Rule - Singlet-Triplet Calculations with Mathcad
2.38: Electron Correlation in Two-electron Systems
2.39: First Trial Wave Function
2.40: Second Trial Wavefunction
2.41: Third Trial Wavefunction
2.42: 129.4 Fourth Trial Wavefunction

2.43: Fifth Trial Wavefunction and Summary
2.44: The Crucial Role of Kinetic Energy in Interpreting Ionization Energies
2.45: Quantum Dots Are Artificial Atoms
2.46: Calculating the Atomic Radius of Polonium
2.47: Calculating the Atomic Radius of Gold
2.48: How Many Bibles Can Fit on the Head of a Pin
2.49: Momentum Wavefunctions and Distributions for the Hydrogen Atom
2.50: The SCF Method for Two Electrons
2.51: Outline of the SCF Method for Two Electrons
2.52: The SCF Method for Two Electrons Using a Gaussian Wave Function
2.53: An Interactive SCF Calculation for the Helium Atom
2.54: Quantum Calculations on the Hydrogen Atom in Coordinate, Momentum and Phase Space
2.55: The Wigner Distribution for the 1s State of the 1D Hydrogen Atom
2.56: The Wigner Distribution for the 2s State of the 1D Hydrogen Atom
2.57: The Wigner Distribution for the 2p State of the 1D Hydrogen Atom
2.58: The Wigner Distribution for the 3s State of the 1D Hydrogen Atom
2.59: The Wigner Distribution for the 3p State of the 1D Hydrogen Atom
2.60: The Wigner Distribution for the 4s State of the 1D Hydrogen Atom
2.61: One-dimensional H-atom with Delta Function Potential
2.62: The Atomic Structure Factor in Coordinate and Momentum Space
