Preface

## 1: Transition-Metal Storage, Transport, and Biomineralization

- 1.1: Biological Significance of Iron, Zinc, Copper, Molybdenum, Cobalt, Chromium, Vanadium, and Nickel
- 1.2: Biological Systems of Metal Storage
- 1.3: Chemical Properties Relative to Storage and Transport
- 1.4: Iron Biomineralization
- 1.5: Transport of Iron
- 1.6: Transport of Zinc, Copper, Vanadium, Chromium, Molybdenum, and Cobalt

## 2: The Reaction Pathways of Zinc Enzymes and Related Biological Catalysts

- 2.1: About Carbonic Anhydrase
- 2.2: Acid-base Equilibria
- 2.3: Catalytic Mechanism
- 2.4: Coordinated Water and NMR
- 2.5: Coordination Geometries
- 2.6: Ester Hydrolysis and Phosphoryl Transfer
- 2.7: Group Transfer and Vitamin B-12
- 2.8: Metal Substitution
- 2.9: Model Chemistry
- 2.10: Nucleophilic Addition of  $\text{OH}^-$  and  $\text{H}^+$
- 2.11: Peptide Hydrolysis
- 2.12: pH Dependence of Inhibitor Binding
- 2.13: Selecting Zinc
- 2.14: Steady-State and Equilibrium Kinetics of Carbonic Anhydrase-Catalyzed  $\text{CO}_2/\text{HCO}_3^-$  Interconversion
- 2.15: Strategies for the Investigation of Zinc Enzymes
- 2.16: The Natural Catalysts
- 2.17: What Do We Learn?

## 3: Calcium in Biological Systems

- 3.1:  $\text{Ca}^{2+}$ -binding Proteins in Microorganisms- The Search for a Prokaryotic Calmodulin
- 3.2: Basic Facts About Calcium- Its Compounds and Reactions
- 3.3: Calcium in Mineralized Tissues
- 3.4: Calmodulin
- 3.5: Extracellular Calcium Ion-binding Proteins
- 3.6: Inositol Trisphosphate and the Calcium Ion Messenger System
- 3.7: Intracellular Calcium Ion Transport
- 3.8: Measurements of "Free" Calcium Concentrations
- 3.9: Measurements of Total Calcium Concentrations
- 3.10: Mitochondrial Calcium Ion Transport
- 3.11: Molecular Aspects of Calcium Ion-Regulated Intracellular Processes (Part 1)
- 3.12: Molecular Aspects of Calcium Ion-regulated Intracellular Processes (Part 2)
- 3.13: Parvalbumin and Calbindins  $\text{D}_{9\text{K}}$  and  $\text{D}_{28\text{K}}$

- 3.14: The Transport and Regulation of  $\text{Ca}^{2+}$  Ions in Higher Organisms
- 3.15: Troponin C

## 4: Biological and Synthetic Dioxygen Carriers

- 4.1: Biological Dioxygen Transport Systems
- 4.2: Biological Oxygen Carriers
- 4.3: Detailed Structures of Hemoglobins and Model Systems
- 4.4: Dioxygen Carriers and Bioinorganic Chemistry
- 4.5: General Aspects of the Chemistry of Cobalt
- 4.6: General Aspects of the Chemistry of Copper
- 4.7: General Aspects of the Chemistry of Dioxygen
- 4.8: General Aspects of the Chemistry of Iron
- 4.9: General Structural Features that Modulate Ligand Activity
- 4.10: Hazards of Life with Dioxygen
- 4.11: Nature of the Metal-Dioxygen Linkage in Biological Systems
- 4.12: Other Ligands for Biological Oxygen Carriers
- 4.13: Requirements for a Model System for Hemoglobin
- 4.14: Requirements for Effective Oxygen Carriers
- 4.15: Role of the Protein in Effecting Biological Oxygen Transport
- 4.16: Selected Chemistry of Dioxygen, Iron, Copper, and Cobalt
- 4.17: Stereochemical Changes Upon Ligation
- 4.18: Structural Basis of Ligand Affinities of Oxygen Carriers
- 4.19: Structures Relevant to Liganded Hemoglobins
- 4.20: Thermodynamic Factors
- 4.21: Ch. 4 References and Abbreviations

## 5: Dioxygen Reactions

- 5.1: Catalase and Peroxidase
- 5.2: Chemistry of Dioxygen
- 5.3: Copper-zinc Superoxide Dismutase
- 5.4: Cytochrome c Oxidase
- 5.5: Dioxygen Toxicity
- 5.6: Monooxygenases
- 5.7: Oxygenases

## 6: Electron Transfer

- 6.1: Biological Redox Components
- 6.2: Coupling Electron Transfers and Substrate Activation
- 6.3: Electron-transfer Rates
- 6.4: Electron-Transfer Theory
- 6.5: Energy Storage and Release
- 6.6: Long-range Electron Transfer in Proteins (Part 1)
- 6.7: Long-range Electron Transfer in Proteins (Part 2)
- 6.8: Marcus Theory

## 7: Ferredoxins, Hydrogenases, and Nitrogenases - Metal-Sulfide Proteins

- 7.1: Iron-sulfur Proteins and Models
- 7.2: Iron-sulfur Proteins and Models (Part 2)
- 7.3: Iron-sulfur Proteins and Models (Part 3)
- 7.4: Iron-sulfur Proteins and Models (Part 4)

- 7.5: Multisite Redox Enzymes
- 7.6: Multisite Redox Enzymes (Part 2)
- 7.7: Multisite Redox Enzymes (Part 3)
- 7.8: Multisite Redox Enzymes (Part 4)
- 7.9: Multisite Redox Enzymes (Part 5)
- 7.10: Multisite Redox Enzymes (Part 6)
- 7.11: Report on the Nitrogenase Crystal Structure\(\;^{\{378-381\}}\)
- 7.12: Rubredoxin- A Single-Fe Tetrathiolate Protein

## 8: Metal/Nucleic Acid Interactions

- 8.1: The Basics
- 8.2: The Basics (Part 2)
- 8.3: A Case Study- Tris(phenanthroline) Metal Complexes
- 8.4: Applications of Different Metal Complexes that Bind Nucleic Acids
- 8.5: Applications of Different Metal Complexes that Bind Nucleic Acids (Part 2)
- 8.6: Nature's Use of Metal/Nucleic-acid Interactions

## 9: Metals in Medicine

- 9.1: Metal Deficiency and Disease
- 9.2: Toxic Effects of Metals
- 9.3: Aspects of Platinum Binding to DNA
- 9.4: Survey of Metals Used for Diagnosis and Chemotherapy
- 9.5: Platinum Anticancer Drugs- A Case Study
- 9.6: Mapping the Major Adducts of cis- and trans-DDP on DNA; Sequence Specificity
- 9.7: Structure of Platinum-DNA Complexes
- 9.8: Site-specifically Platinated DNA \(\;^{\{154\}}\)
- 9.9: Bioinorganic Chemistry of Platinum Anticancer Drugs- How Might They Work?
- 9.10: Bioinorganic Chemistry of Platinum Anticancer Drugs; How Might They Work? (Part 2)
- 9.11: Design of New Inorganic Anticancer Drugs
