

Index

A

Accelerators

2.1: Accelerators

alpha decay

4.4: Barrier Penetration

angular momentum (quantum)

3.6: Properties of Nuclear States

annihilation

5.3: QED - Photon Couples to e^+e^-

antimater

5.2: Antiparticles

5.3: QED - Photon Couples to e^+e^-

asymmetric fission

4.3: Fission

B

barrier penetration

4.4: Barrier Penetration

binding energy (BE)

3.3: Deeper Analysis of Nuclear Masses

binding energy (nuclear)

3.3: Deeper Analysis of Nuclear Masses

3.4: Nuclear mass formula

Bulk energy (nuclear)

3.4: Nuclear mass formula

C

Cherenkov radiation

2.4: Detectors

Collective Nuclear Rotations

4.2: Collective Models

Color Symmetry

8.5: Color Symmetry

Continuous Symmetry

7.7: Continuous Symmetries

cosmic rays

8.2: Strange Particles

CP violation

7.6: CP Violation

CPT symmetry

7.5: The CPT Theorem

CPT Theorem

7.5: The CPT Theorem

Cyclotron

2.1: Accelerators

D

dark matter

1.12: Extraterrestrial Particle Physics

Dirac equation

5.1: The Difference Between Relativistic and Non-Relativistic Quantum Mechanics

Dirac sea

5.2: Antiparticles

Discrete Symmetries

7.4: Discrete Symmetries

doubly magic nucleus

4.1: Nuclear Shell Model

F

Fermi coupling

6.4: Weak Nuclear Force

Feynman diagram

5.3: QED - Photon Couples to e^+e^-

5.4: Fluctuations of the Vacuum

fission

1.4: Fission and Fusion

4.3: Fission

Fundamental Forces

6: The Four Fundamental Forces

fusion

1.4: Fission and Fusion

G

gauge particles

7.11: Gauge Symmetries

Gauge Symmetries

7.11: Gauge Symmetries

gluons

6.5: Strong Nuclear Force

gravity

6.2: Gravity

H

hermitian conjugate

7.7: Continuous Symmetries

holes

5.2: Antiparticles

I

invariant mass

9.2: Invariant Mass

isobars

3.1: Experimental Facts

isospin

3.6: Properties of Nuclear States

8.1: The First Symmetry - Isospin

isotopic spin

8.1: The First Symmetry - Isospin

L

Leptons

1.8: Mesons, Leptons and Neutrinos

Linac

2.1: Accelerators

liquid drop model

4.2: Collective Models

Lorentz transformations

9.1: Lorentz Transformations of Energy and Momentum

Lorentz Invariance

7.2: Lorentz and Poincaré Invariance

M

magic numbers

4.1: Nuclear Shell Model

mesons

1.8: Mesons, Leptons and Neutrinos

N

neutrino

1.8: Mesons, Leptons and Neutrinos

neutron decay

6.4: Weak Nuclear Force

neutron excess

3.5: Stability of Nuclei

Noether's Theorem

7.1: Importance of Symmetries - Noether's theorem

nuclear saturation

3.3: Deeper Analysis of Nuclear Masses

Nuclear Shell Model

4.1: Nuclear Shell Model

P

parity

3.6: Properties of Nuclear States

7.4: Discrete Symmetries

Pauli Energy (nuclear)

3.4: Nuclear mass formula

perturbation series

5.4: Fluctuations of the Vacuum

pion

1.8: Mesons, Leptons and Neutrinos

Poincaré group

7.2: Lorentz and Poincaré Invariance

Poincaré Invariance

7.2: Lorentz and Poincaré Invariance

Q

Q factor

3.5: Stability of Nuclei

quantum chromodynamics (QCD)

1.9: The sub-structure of the nucleon (Quantum Chromodynamics)

6.5: Strong Nuclear Force

quantum numbers

3.6: Properties of Nuclear States

Quarks

1.9: The sub-structure of the nucleon (Quantum Chromodynamics)

R

Relativistic Kinematics

9: Relativistic Kinematics

relativistic quantum theory

5.2: Antiparticles

Renormalization

5.5: Infinities and Renormalization

S

saturation hypothesis

3.3: Deeper Analysis of Nuclear Masses

Scintillation

2.4: Detectors

second quantization

5.1: The Difference Between Relativistic and Non-Relativistic Quantum Mechanics

solar neutrinos

1.12: Extraterrestrial Particle Physics

space inversion symmetry

7.4: Discrete Symmetries

stability (nuclear)

[3.5: Stability of Nuclei](#)

Strange Particle

[8.2: Strange Particles](#)

Strong nuclear force

[3.6: Properties of Nuclear States](#)

[6.5: Strong Nuclear Force](#)

Surface energy (nuclear)

[3.4: Nuclear mass formula](#)

symmetric fission

[4.3: Fission](#)

symmetry transformation

[7.1: Importance of Symmetries - Noether's theorem](#)

synchrotron

[2.1: Accelerators](#)

T

tunneling

[4.4: Barrier Penetration](#)

V

vacuum fluctuations

[5.4: Fluctuations of the Vacuum](#)

valley of stability

[3.5: Stability of Nuclei](#)

van der Graaff generator

[2.1: Accelerators](#)

virtual particles

[5.4: Fluctuations of the Vacuum](#)

W

W^+ bosons

[1.10: The \$W^+\$, \$W^-\$, and Z bosons](#)

W^- bosons

[1.10: The \$W^+\$, \$W^-\$, and Z bosons](#)

Weak nuclear force

[1.10: The \$W^+\$, \$W^-\$, and Z bosons](#)

[6.4: Weak Nuclear Force](#)

Z

Z bosons

[1.10: The \$W^+\$, \$W^-\$, and Z bosons](#)
