

Index

A

aberration
4.3: Lenses
5.2: Other Optical Instruments

absolute space
7.1: Introduction

achromatic
5.2: Other Optical Instruments

achromatic doublet
4.3: Lenses

aether
7.2: Consequences of Special Relativity

afocal system
4.3: Lenses

alpha particle
9.2: The Early Atom
10.2: Radioactivity

AM Radio Waves
3.1: The Electromagnetic Spectrum

Amplitude
1.3: Periodic Motion
1.7: Waves on Strings
2.2: Sound Intensity and Level
2.4: Interactions with Sound Waves

Angular frequency
1.3: Periodic Motion

Angular momentum
9.3: Atomic Physics and Quantum Mechanics

annihilation
7.3: Relativistic Quantities

Antimatter
7.3: Relativistic Quantities

antinode
2.1: Introduction
2.5: Further Topics

aperture
5.1: The Human Eye
5.2: Other Optical Instruments

atomic number
9.5: Multielectron Atoms

atomic orbital
8.2: Applications of Quantum Mechanics
9.5: Multielectron Atoms

atomic spectra
10.1: The Nucleus

Avogadro's number
9.2: The Early Atom

B

Bell's theorem
8.1: History and Quantum Mechanical Quantities

Beta decay
10.2: Radioactivity

binary data
6.4: Applications of Wave Optics

black body
8.1: History and Quantum Mechanical Quantities
9.1: Overview
9.2: The Early Atom

Black body radiation
8.1: History and Quantum Mechanical Quantities

boundary condition
1.6: Wave Behavior and Interaction

brachytherapy
10.4: Applications of Nuclear Physics

C

cathode
9.2: The Early Atom

CCD
9.4: Applications of Atomic Physics

centripetal
9.2: The Early Atom

centripetal acceleration
1.3: Periodic Motion

Chromatic aberration
5.2: Other Optical Instruments

cladding
4.2: Reflection, Refraction, and Dispersion

classical electrodynamics
3.2: Electromagnetic Waves and their Properties

Classical mechanics
7.3: Relativistic Quantities

classical physics
2.3: Doppler Effect and Sonic Booms

cochlea
2.2: Sound Intensity and Level

coherence
8.2: Applications of Quantum Mechanics

coherent
2.4: Interactions with Sound Waves
6.1: Superposition and Interference

compression
1.5: Waves

computed tomography
10.4: Applications of Nuclear Physics

concave lens
4.3: Lenses

concave mirror
4.4: Mirrors

conductor
3.3: Applications of EM Waves

constructive interference
1.6: Wave Behavior and Interaction
2.5: Further Topics
5.2: Other Optical Instruments
6.2: Diffraction

contrast
5.2: Other Optical Instruments
6.4: Applications of Wave Optics

control rod
10.4: Applications of Nuclear Physics

convex
5.2: Other Optical Instruments

convex lens
4.3: Lenses

convex mirror
4.4: Mirrors

crest
1.5: Waves

critically damped
1.4: Damped and Driven Oscillations

cryptography
8.1: History and Quantum Mechanical Quantities

crystallography
5.2: Other Optical Instruments
9.2: The Early Atom

D

damping
2.5: Further Topics

de Broglie wavelength
9.4: Applications of Atomic Physics

Decay
10.2: Radioactivity

decibels (units)
2.2: Sound Intensity and Level

deformation
1.2: Hooke's Law

destructive interference
1.6: Wave Behavior and Interaction
2.5: Further Topics
5.2: Other Optical Instruments
6.2: Diffraction

dielectric
4.2: Reflection, Refraction, and Dispersion

differential equation
3.2: Electromagnetic Waves and their Properties

diffraction
5.2: Other Optical Instruments
6.2: Diffraction
8.1: History and Quantum Mechanical Quantities
9.2: The Early Atom

diode
10.2: Radioactivity
10.4: Applications of Nuclear Physics

diopter
5.2: Other Optical Instruments

dipole
4.2: Reflection, Refraction, and Dispersion

direction of propagation
1.5: Waves

Dispersion
6.3: Further Topics

displacement
2.4: Interactions with Sound Waves

dissipative force
1.3: Periodic Motion

distortion
5.2: Other Optical Instruments

doppler effect
2.3: Doppler Effect and Sonic Booms
3.2: Electromagnetic Waves and their Properties

Doppler shift
9.2: The Early Atom

dosimeter
10.4: Applications of Nuclear Physics

dynamic contrast ratio
5.1: The Human Eye

E

eardrum
2.2: Sound Intensity and Level

Elastic potential energy
1.3: Periodic Motion

Elasticity

- 1.2: Hooke's Law
- 2.1: Introduction

Electromagnetic force

- 9.2: The Early Atom

Electromagnetic Radiation

- 6.3: Further Topics
- 10.2: Radioactivity

electromagnetic waves

- 3.2: Electromagnetic Waves and their Properties

electron affinity

- 8.2: Applications of Quantum Mechanics

electron shell

- 2.4: Interactions with Sound Waves
- 3.2: Electromagnetic Waves and their Properties

fusion

- 10.3: Quantum Tunneling and Conservation Laws
- 10.4: Applications of Nuclear Physics

G

Galilean transformation

- 7.3: Relativistic Quantities

gamma (γ) rays

- 3.1: The Electromagnetic Spectrum
- 9.2: The Early Atom
- 10.2: Radioactivity
- 10.4: Applications of Nuclear Physics

Gamma decay

- 3.1: The Electromagnetic Spectrum

gamma ray

- 9.3: Atomic Physics and Quantum Mechanics

general relativity

- 7.4: Implications of Special Relativity

geometric optics

- 4.1: Overview

Gluon

- 10.1: The Nucleus

grating

- 8.1: History and Quantum Mechanical Quantities

ground state

- 8.2: Applications of Quantum Mechanics

group velocity

- 1.5: Waves

H

harmonic oscillator

- 8.1: History and Quantum Mechanical Quantities

helical

- 6.4: Applications of Wave Optics

hertz

- 2.1: Introduction

Huygen's principle

- 2.5: Further Topics

I

image distance

- 4.3: Lenses

incandescence

- 6.4: Applications of Wave Optics

incident ray

- 6.3: Further Topics

index of refraction

- 4.2: Reflection, Refraction, and Dispersion
- 6.3: Further Topics

inelastic scattering

- 9.2: The Early Atom

interfere

- 2.4: Interactions with Sound Waves

interference

- 1.6: Wave Behavior and Interaction
- 6.2: Diffraction
- 6.3: Further Topics
- 6.4: Applications of Wave Optics
- 8.2: Applications of Quantum Mechanics

interferometer

- 6.1: Superposition and Interference
- 7.3: Relativistic Quantities

ionization energy

- 8.2: Applications of Quantum Mechanics

ionizing radiation

- 3.1: The Electromagnetic Spectrum
- 10.4: Applications of Nuclear Physics

iridescence

- 6.2: Diffraction

isotope

- 10.4: Applications of Nuclear Physics

K

Kelvin

- 2.1: Introduction

kinetic energy

- 1.2: Hooke's Law

L

land

- 6.4: Applications of Wave Optics

laser

- 8.2: Applications of Quantum Mechanics

LCD

- 6.4: Applications of Wave Optics

Length contraction

- 7.4: Implications of Special Relativity

lens

- 5.2: Other Optical Instruments
- 6.1: Superposition and Interference

line element

- 7.4: Implications of Special Relativity

longitudinal

- 1.5: Waves

Lorentz factor

- 7.2: Consequences of Special Relativity
- 7.3: Relativistic Quantities

Lorentz transformations

- 7.1: Introduction
- 7.3: Relativistic Quantities
- 7.4: Implications of Special Relativity

Lorenz Invariance

- 7.1: Introduction

luminance

- 5.1: The Human Eye

luminiferous aether

- 7.1: Introduction

M

Mach number

- 2.3: Doppler Effect and Sonic Booms

Magnification

- 4.3: Lenses

mass distribution

- 1.3: Periodic Motion

matter waves

- 8.1: History and Quantum Mechanical Quantities
- 9.2: The Early Atom
- 9.3: Atomic Physics and Quantum Mechanics

Maxwell's Equations

- 7.1: Introduction
