

# TABLE OF CONTENTS

## Licensing

## 1: Fundamentals of Probability

- 1.1: Statistical Properties of Random Walks
- 1.2: Basic Concepts in Probability Theory
- 1.3: Entropy and Probability
- 1.4: General Aspects of Probability Distributions
- 1.5: Bayesian Statistical Inference
- 1.S: Summary

## 2: Thermodynamics

- 2.1: What is Thermodynamics?
- 2.2: The Zeroth Law of Thermodynamics
- 2.3: Mathematical Interlude - Exact and Inexact Differentials
- 2.4: The First Law of Thermodynamics
- 2.5: Heat Engines and the Second Law of Thermodynamics
- 2.6: The Entropy
- 2.7: Thermodynamic Potentials
- 2.8: Maxwell Relations
- 2.9: Equilibrium and Stability
- 2.10: Applications of Thermodynamics
- 2.11: Phase Transitions and Phase Equilibria
- 2.12: Entropy of Mixing and the Gibbs Paradox
- 2.13: Some Concepts in Thermochemistry
- 2.14: Appendix I- Integrating Factors
- 2.15: Appendix II- Legendre Transformations
- 2.16: Appendix III- Useful Mathematical Relations
- 2.S: Summary

## 3: Ergodicity and the Approach to Equilibrium

- 3.1: Modeling the Approach to Equilibrium
- 3.2: Phase Flows in Classical Mechanics
- 3.3: Irreversibility and Poincaré Recurrence
- 3.4: Remarks on Ergodic Theory
- 3.5: Thermalization of Quantum Systems
- 3.6: Appendices
- 3.S: Summary

## 4: Statistical Ensembles

- 4.1: Microcanonical Ensemble ( $\mu$ CE)
- 4.2: The Quantum Mechanical Trace
- 4.3: Thermal Equilibrium
- 4.4: Ordinary Canonical Ensemble (OCE)
- 4.5: Grand Canonical Ensemble (GCE)
- 4.6: Statistical Ensembles from Maximum Entropy
- 4.7: Ideal Gas Statistical Mechanics

- 4.8: Selected Examples
- 4.9: Statistical Mechanics of Molecular Gases
- 4.10: Appendix I- Additional Examples
- 4.S: Summary

## 5: Noninteracting Quantum Systems

- 5.1: Statistical Mechanics of Noninteracting Quantum Systems
- 5.2: Quantum Ideal Gases - Low Density Expansions
- 5.3: Entropy and Counting States
- 5.4: Lattice Vibrations - Einstein and Debye Models
- 5.5: Photon Statistics
- 5.6: The Ideal Bose Gas
- 5.7: The Ideal Fermi Gas
- 5.8: The Ideal Fermi Gas
- 5.9: Appendix I- Second Quantization
- 5.10: Appendix II- Ideal Bose Gas Condensation
- 5.11: Appendix III- Example Bose Condensation Problem
- 5.S: Summary

## 6: Classical Interacting Systems

- 6.1: Ising Model
- 6.2: Nonideal Classical Gases
- 6.3: Lee-Yang Theory
- 6.4: Liquid State Physics
- 6.5: Coulomb Systems - Plasmas and the Electron Gas
- 6.6: Polymers
- 6.7: Appendix I- Potts Model in One Dimension
- 6.S: Summary

## 7: Mean Field Theory of Phase Transitions

- 7.1: The van der Waals system
- 7.2: Fluids, Magnets, and the Ising Model
- 7.3: Mean Field Theory
- 7.4: Variational Density Matrix Method
- 7.5: Landau Theory of Phase Transitions
- 7.6: Mean Field Theory of Fluctuations
- 7.7: Global Symmetries
- 7.8: Ginzburg-Landau Theory
- 7.9: Appendix I- Equivalence of the Mean Field Descriptions
- 7.10: Appendix II- Additional Examples
- 7.S: Summary

## 8: Nonequilibrium Phenomena

- 8.1: Equilibrium, Nonequilibrium and Local Equilibrium
- 8.2: Boltzmann Transport Theory
- 8.3: Weakly Inhomogeneous Gas
- 8.4: Relaxation Time Approximation
- 8.5: Diffusion and the Lorentz model
- 8.6: Linearized Boltzmann Equation
- 8.7: The Equations of Hydrodynamics

- [8.8: Nonequilibrium Quantum Transport](#)
- [8.9: Stochastic Processes](#)
- [8.10: Appendix I- Boltzmann Equation and Collisional Invariants](#)
- [8.11: Appendix II- Distributions and Functionals](#)
- [8.12: Appendix III- General Linear Autonomous Inhomogeneous ODEs](#)
- [8.13: Appendix IV- Correlations in the Langevin formalism](#)
- [8.14: Appendix V- Kramers-Krönig Relations](#)
- [8.S: Summary](#)

## 9: Renormalization

- [9.1: The Program of Renormalization](#)
- [9.2: Real Space Renormalization](#)
- [9.3: Block Spin Transformation](#)
- [9.4: Scaling Variables](#)
- [9.5: RSRG on Hierarchical Lattices The](#)
- [9.S: Summary](#)
