

Agenda

DLs 1 and 2:

- 5.0: Overview
- 5.1: Steady-State Energy-Density Model
- 5.2: Steady-State Energy Density Model Applied to Fluids

DLs 3 and 4:

- 5.3: Steady-State Energy Density Model Applied to Electric Circuit
- 5.4: Examples of Using the Steady-State Energy Density Model
- 5.5: Simple Circuit Analysis Techniques
- 5.6: Extending the Electrical Model

DLs 5, 6, and 7:

- 5.7: The Linear Transport Model
- 5.8: Exponential Change Model
- 5.9: Wrap up

DLs 8 and 9:

- 6.0: Overview
- 6.1: The Galilean Space-Time Model
- 6.2: The description of motion in the Galilean model
- 6.3: The Force model
- 6.4: Balanced Forces
- 6.5: The Forces We Typically Experience
- 6.6 : Wrap Up

DLs 10 and 11:

- [7.0: Overview](#)
- 7.1: (Linear) Momentum Conservation Model
- [7.2: Applications of Momentum Conservation](#)
- 7.3: Momentum Conservation Model Summary

DLs 12, 13, and 14:

- 7.4: Angular Momentum Conservation Model
- [7.5: The Rotational Analogs of Force, Momentum, Mass and Impulse](#)
- 7.6: Other Angular Counterparts
- 7.7: Interesting Effects Involving Angular Momentum
- 7.8: Angular Momentum Conservation Model Summary
- [7.9: Wrap-up](#)

DLs 15, 16, 17, and 18:

- [8.0: Overview](#)
- 8.1: The Newtonian Model
- 8.2: A Special Case: Constant Acceleration
- 8.3: Another Special Case: Circular Motion
- 8.4: The Newtonian Model Summary
- 8.5: Simple Harmonic Motion Model
- 8.6: The general Solution to the Equation
- 8.7: Wrap up
