

TABLE OF CONTENTS

Licensing

1: Preliminary Concepts

- 1.1: What is Electromagnetics?
- 1.2: Electromagnetic Spectrum
- 1.3: Fundamentals of Waves
- 1.4: Guided and Unguided Waves
- 1.5: Phasors
- 1.6: Units
- 1.7: Notation

2: Electric and Magnetic Fields

- 2.1: What is a Field?
- 2.2: Electric Field Intensity
- 2.3: Permittivity
- 2.4: Electric Flux Density
- 2.5: Magnetic Flux Density
- 2.6: Permeability
- 2.7: Magnetic Field Intensity
- 2.8: Electromagnetic Properties of Materials

3: Transmission Lines

- 3.1: Introduction to Transmission Lines
- 3.2: Types of Transmission Lines
- 3.3: Transmission Lines as Two-Port Devices
- 3.4: Lumped-Element Model
- 3.5: Telegrapher's Equations
- 3.6: Wave Equation for a TEM Transmission Line
- 3.7: Characteristic Impedance
- 3.8: Wave Propagation on a TEM Transmission Line
- 3.9: Lossless and Low-Loss Transmission Lines
- 3.10: Coaxial Line
- 3.11: Microstrip Line
- 3.12: Voltage Reflection Coefficient
- 3.13: Standing Waves
- 3.14: Standing Wave Ratio
- 3.15: Input Impedance of a Terminated Lossless Transmission Line
- 3.16: Input Impedance for Open- and Short-Circuit Terminations
- 3.17: Applications of Open- and Short-Circuited Transmission Line Stubs
- 3.18: Measurement of Transmission Line Characteristics
- 3.19: Quarter-Wavelength Transmission Line
- 3.20: Power Flow on Transmission Lines
- 3.21: Impedance Matching - General Considerations
- 3.22: Single-Reactance Matching
- 3.23: Single-Stub Matching

4: Vector Analysis

- 4.1: Vector Arithmetic
- 4.2: Cartesian Coordinates
- 4.3: Cylindrical Coordinates
- 4.4: Spherical Coordinates
- 4.5: Gradient
- 4.6: Divergence
- 4.7: Divergence Theorem
- 4.8: Curl
- 4.9: Stokes' Theorem
- 4.10: The Laplacian Operator

5: Electrostatics

- 5.1: Coulomb's Law
- 5.2: Electric Field Due to Point Charges
- 5.3: Charge Distributions
- 5.4: Electric Field Due to a Continuous Distribution of Charge
- 5.5: Gauss' Law - Integral Form
- 5.6: Electric Field Due to an Infinite Line Charge using Gauss' Law
- 5.7: Gauss' Law - Differential Form
- 5.8: Force, Energy, and Potential Difference
- 5.9: Independence of Path
- 5.10: Kirchoff's Voltage Law for Electrostatics - Integral Form
- 5.11: Kirchoff's Voltage Law for Electrostatics - Differential Form
- 5.12: Electric Potential Field Due to Point Charges
- 5.13: Electric Potential Field due to a Continuous Distribution of Charge
- 5.14: Electric Field as the Gradient of Potential
- 5.15: Poisson's and Laplace's Equations
- 5.16: Potential Field Within a Parallel Plate Capacitor
- 5.17: Boundary Conditions on the Electric Field Intensity (E)
- 5.18: Boundary Conditions on the Electric Flux Density (D)
- 5.19: Charge and Electric Field for a Perfectly Conducting Region
- 5.20: Dielectric Media
- 5.21: Dielectric Breakdown
- 5.22: Capacitance
- 5.23: The Thin Parallel Plate Capacitor
- 5.24: Capacitance of a Coaxial Structure
- 5.25: Electrostatic Energy

6: Steady Current and Conductivity

- 6.1: Convection and Conduction Currents
- 6.2: Current Distributions
- 6.3: Conductivity
- 6.4: Resistance
- 6.5: Conductance
- 6.6: Power Dissipation in Conducting Media

7: Magnetostatics

- 7.1: Comparison of Electrostatics and Magnetostatics
- 7.2: Gauss' Law for Magnetic Fields - Integral Form

- 7.3: Gauss' Law for Magnetism - Differential Form
- 7.4: Ampere's Circuital Law (Magnetostatics) - Integral Form
- 7.5: Magnetic Field of an Infinitely-Long Straight Current-Bearing Wire
- 7.6: Magnetic Field Inside a Straight Coil
- 7.7: Magnetic Field of a Toroidal Coil
- 7.8: Magnetic Field of an Infinite Current Sheet
- 7.9: Ampere's Law (Magnetostatics) - Differential Form
- 7.10: Boundary Conditions on the Magnetic Flux Density (B)
- 7.11: Boundary Conditions on the Magnetic Field Intensity (H)
- 7.12: Inductance
- 7.13: Inductance of a Straight Coil
- 7.14: Inductance of a Coaxial Structure
- 7.15: Magnetic Energy
- 7.16: Magnetic Materials

8: Time-Varying Fields

- 8.1: Comparison of Static and Time-Varying Electromagnetics
- 8.2: Electromagnetic Induction
- 8.3: Faraday's Law
- 8.4: Induction in a Motionless Loop
- 8.5: Transformers - Principle of Operation
- 8.6: Transformers as Two-Port Devices
- 8.7: The Electric Generator
- 8.8: The Maxwell-Faraday Equation
- 8.9: Displacement Current and Ampere's Law

9: Plane Waves in Lossless Media

- 9.1: Maxwell's Equations in Differential Phasor Form
- 9.2: Wave Equations for Source-Free and Lossless Regions
- 9.3: Types of Waves
- 9.4: Uniform Plane Waves - Derivation
- 9.5: Uniform Plane Waves - Characteristics
- 9.6: Wave Polarization
- 9.7: Wave Power in a Lossless Medium

10: Appendices

- 10.1: Permittivity of Some Common Materials
- 10.2: Permeability of Some Common Materials
- 10.3: Conductivity of Some Common Materials
- 10.4: Mathematical Formulas - Trigonometry
- 10.5: Mathematical Formulas - Vector Operators
- 10.6: Mathematical Formulas - Vector Identities
- 10.7: Physical Constants
