

# TABLE OF CONTENTS

## Licensing

### 1: Introduction

- 1.1: Experimental motivations
- 1.2: Wave Mechanics Postulates
- 1.3: Postulates' Discussion
- 1.4: Continuity Equation
- 1.5: Eigenstates and Eigenvalues
- 1.6: Time Evolution
- 1.7: Space Dependence
- 1.8: Dimensionality Reduction
- 1.9: Exercise Problems

### 2: 1D Wave Mechanics

- 2.1: Basic Relations
- 2.2: Free Particle- Wave Packets
- 2.3: Particle Reflection and Tunneling
- 2.4: Exercise Problems
- 2.5: Motion in Soft Potentials
- 2.6: Resonant Tunneling, and Metastable States
- 2.7: 2.6. Localized State Coupling, and Quantum Oscillations
- 2.8: Periodic Systems- Energy Bands and Gaps
- 2.9: Periodic Systems- Particle Dynamics
- 2.10: Harmonic Oscillator- Brute Force Approach

### 3: Higher Dimensionality Effects

- 3.1: Quantum Interference and the AB Effect
- 3.2: Landau Levels and the Quantum Hall Effect
- 3.3: Scattering and Diffraction
- 3.4: Energy Bands in Higher Dimensions
- 3.5: Axially-symmetric Systems
- 3.6: Spherically-symmetric Systems- Brute Force Approach
- 3.7: Atoms
- 3.8: Spherically-symmetric Scatterers
- 3.9: Exercise Problems

### 4: Bra-ket Formalism

- 4.1: Motivation
- 4.2: States, State Vectors, and Linear Operators
- 4.3: State Basis and Matrix Representation
- 4.4: Change of Basis, and Matrix Diagonalization
- 4.5: Observables- Expectation Values and Uncertainties
- 4.6: Quantum Dynamics- Three Pictures
- 4.7: Coordinate and Momentum Representations
- 4.8: Exercise Problems

## 5: Some Exactly Solvable Problems

- 5.1: Two-level Systems
- 5.2: The Ehrenfest Theorem
- 5.3: The Feynman Path Integral
- 5.4: Revisiting Harmonic Oscillator
- 5.5: Glauber States and Squeezed States
- 5.6: Revisiting Spherically-symmetric Problems
- 5.7: Spin and Its Addition to Orbital Angular Momentum
- 5.8: Exercise Problems

## 6: Perturbative Approaches

- 6.1: Time-independent Perturbations
- 6.2: The linear Stark Effect
- 6.3: Fine Structure of atomic Levels
- 6.4: The Zeeman Effect
- 6.5: Time-dependent Perturbations
- 6.6: Quantum-mechanical Golden Rule
- 6.7: Golden Rule for Step-like Perturbations
- 6.8: Exercise Problems

## 7: Open Quantum Systems

- 7.1: Open Systems, and the Density Matrix
- 7.2: Coordinate Representation, and the Wigner Function
- 7.3: Open System Dynamics- Dephasing
- 7.4: Fluctuation-dissipation Theorem
- 7.5: The Heisenberg-Langevin Approach
- 7.6: Density Matrix Approach
- 7.7: Exercise Problems

## 8: Multiparticle Systems

- 8.1: Distinguishable and Indistinguishable Particles
- 8.2: Singlets, Triplets, and the Exchange Interaction
- 8.3: Multiparticle Systems
- 8.4: Perturbative Approaches
- 8.5: Quantum Computation and Cryptography
- 8.6: Exercise Problems

## 9: Elements of Relativistic Quantum Mechanics

- 9.1: Electromagnetic Field Quantization
- 9.2: Photon Absorption and Counting
- 9.3: Photon Emission- Spontaneous and Stimulated
- 9.4: Cavity QED
- 9.5: The Klein-Gordon and Relativistic Schrödinger Equations
- 9.6: Dirac's Theory
- 9.7: Low Energy Limit
- 9.8: Exercise Problems

## 10: Making Sense of Quantum Mechanics

- [10.1: Quantum measurements](#)
- [10.2: QND Measurements](#)
- [10.3: Hidden Variables, the Bell Theorem, and Local Reality](#)
- [10.4: Interpretations of Quantum Mechanics](#)

[Index](#)
