

## Index

### A

Abrikosov vortices  
4.3: Landau's mean-field theory

### B

bandgap  
6.4: Charge Carriers in Semiconductors - Statics and Kinetics  
blackbody radiation  
2.6: Two important applications  
bolometer  
5.3: Volume and Temperature  
Boltzmann distribution  
2.8: Systems of Independent Particles

### C

conduction band  
6.4: Charge Carriers in Semiconductors - Statics and Kinetics  
correct Boltzmann counting  
3.1: Ideal Classical Gas  
correlation functions  
5.4: Fluctuations as functions of time  
5.8: Back to the correlation function  
Curie law  
4.5: Ising model - Exact and numerical results  
Curie temperature  
4.4: Ising model - Weiss molecular-field theory

### D

Debye law  
2.6: Two important applications  
detailed balance relation  
4.5: Ising model - Exact and numerical results  
diffusion  
5.6: The Kramers problem and the Smoluchowski equation  
Drude formula  
6.2: The Ohm law and the Drude formula

### E

energy diffusion equation  
5.7: The Fokker-Planck Equation

### F

Fermi energy  
3.3: Degenerate Fermi gas  
6.4: Charge Carriers in Semiconductors - Statics and Kinetics  
fluctuations  
5.1: Characterization of Fluctuations  
Fourier law  
6.5: Thermoelectric effects

### G

generalized Langevin equation  
5.6: The Kramers problem and the Smoluchowski equation

### Gibbs phase rule

4.1: First order phase transitions  
grand canonical ensemble  
2.7: Grand canonical ensemble and distribution

### H

heat equation  
6.5: Thermoelectric effects

### I

Ising theory  
4.4: Ising model - Weiss molecular-field theory

### J

Josephson effects  
4.3: Landau's mean-field theory

### K

Kramers problem  
5.6: The Kramers problem and the Smoluchowski equation  
Kramers' theory  
5.6: The Kramers problem and the Smoluchowski equation

### L

Langevin equation  
5.5: Fluctuations and Dissipation  
Liouville theorem  
6.1: The Liouville Theorem and the Boltzmann Equation

### M

Maxwell distribution  
3.1: Ideal Classical Gas  
Maxwell's demon  
2.3: Maxwell's Demon, information, and computing

### N

Nyquist formula  
5.5: Fluctuations and Dissipation

### O

Ohm's Law  
6.2: The Ohm law and the Drude formula

### P

paramagnetic materials  
4.5: Ising model - Exact and numerical results  
Peltier coefficient  
6.5: Thermoelectric effects  
Poisson distribution  
5.2: Energy and the number of particles

### Q

quasimomentum  
6.4: Charge Carriers in Semiconductors - Statics and Kinetics

### R

reductionism  
2.3: Maxwell's Demon, information, and computing

### S

scattering integral  
6.1: The Liouville Theorem and the Boltzmann Equation  
Schottky formula  
5.5: Fluctuations and Dissipation  
Seebeck coefficient  
6.5: Thermoelectric effects  
Seebeck effect  
6.5: Thermoelectric effects  
Smoluchowski Equation  
5.6: The Kramers problem and the Smoluchowski equation  
Sommerfeld expansion  
3.3: Degenerate Fermi gas  
Sommerfeld theory  
6.2: The Ohm law and the Drude formula  
spectral density  
5.4: Fluctuations as functions of time  
statistical ensemble  
2.1: Statistical ensemble and probability  
Szilard engine  
2.3: Maxwell's Demon, information, and computing

### T

thermocouple  
6.5: Thermoelectric effects  
thermodynamic fluctuations of temperature  
5.3: Volume and Temperature  
third virial coefficient  
3.5: Gases of weakly interacting particles  
transfer matrix approach  
4.5: Ising model - Exact and numerical results

### V

valence band  
6.4: Charge Carriers in Semiconductors - Statics and Kinetics

### W

Weiss theory  
4.4: Ising model - Weiss molecular-field theory  
workfunction  
6.3: Electrochemical potential and drift-diffusion equation
