

TABLE OF CONTENTS

Licensing

13: Newton's Law of Gravitation

- 13.1: The Law of Gravitation
- 13.2: Gravitational Field
- 13.3: Gravitational Flux
- 13.4: Flux from Multiple Masses
- 13.5: Effects of Relativity
- 13.6: Kepler's Laws
- 13.7: Use of Conservation Laws
- 13.8: Problems

14: Forces in Relativity

- 14.1: Potential Momentum
- 14.2: Aharonov-Bohm Effect
- 14.3: Forces from Potential Momentum
- 14.4: Lorenz Condition
- 14.5: Gauge Theories and Other Theories
- 14.6: Conservation of Four-Momentum
- 14.7: Virtual Particles
- 14.8: Negative Energies and Antiparticles
- 14.9: Problems

15: Electromagnetic Forces

- 15.1: Electromagnetic Four-Potential
- 15.2: Electric and Magnetic Fields and Forces
- 15.3: Charged Particle Motion
- 15.4: Forces on Currents in Conductors
- 15.5: Torque on a Magnetic Dipole and Electric Motors
- 15.6: Electric Generators and Faraday's Law
- 15.7: EMF and Scalar Potential
- 15.8: Problems

16: Generation of Electromagnetic Fields

- 16.1: Coulomb's Law and the Electric Field
- 16.2: Gauss's Law for Electricity
- 16.3: Gauss's Law for Magnetism
- 16.4: Coulomb's Law and Relativity
- 16.5: Moving Charge and Magnetic Fields
- 16.6: Electromagnetic Radiation
- 16.7: The Lorenz Condition
- 16.8: Problems

17: Capacitors, Inductors, and Resistors

- 17.1: The Capacitor and Ampère's Law
- 17.2: Magnetic Induction and Inductors
- 17.3: Resistance and Resistors
- 17.4: Energy of Electric and Magnetic Fields
- 17.5: Kirchhoff's Laws
- 17.6: Problems

18: Measuring the Very Small

- 18.1: Continuous Matter or Atoms?
- 18.2: The Ring Around the Moon
- 18.3: The Geiger-Marsden Experiment
- 18.4: Cosmic Rays and Accelerators
- 18.5: Commentary
- 18.6: Problems

19: Atoms

- 19.1: Fermions and Bosons
- 19.2: Angular momentum and magnetic moment
- 19.3: The Hydrogen Atom
- 19.4: Complex Atoms
- 19.5: Atomic Spectra
- 19.6: Problems

20: The Standard Model

- 20.1: Hadrons and Leptons
- 20.2: Quantum Chromodynamics
- 20.3: The Electroweak Theory
- 20.4: Grand Unification?
- 20.5: Problems

21: Atomic Nuclei

- 21.1: Molecules — an Analogy
- 21.2: Nuclear Binding Energies
- 21.3: Radioactivity
- 21.4: Nuclear Fusion and Fission
- 21.5: Problems

22: Heat, Temperature, and Friction

- 22.1: Temperature
- 22.2: Heat
- 22.3: Friction
- 22.4: Problems

23: Entropy

- 23.1: States of a Brick
- 23.2: Second Law of Thermodynamics
- 23.3: Two Bricks in Thermal Contact

- [23.4: Thermodynamic Temperature](#)
- [23.5: Specific Heat](#)
- [23.6: Entropy and Heat Conduction](#)
- [23.7: Problems](#)

[24: The Ideal Gas and Heat Engines](#)

- [24.1: Ideal Gas](#)
- [24.2: Heat Engines](#)
- [24.3: Perpetual Motion Machines](#)
- [24.4: Problems](#)

[25: Constants, Units, and Conversions](#)

- [25.1: SI Units](#)
- [25.2: Advice on Calculations](#)
- [25.3: Constants of Nature](#)
- [25.4: Properties of Stable Particles](#)
- [25.5: Properties of Solar System Objects](#)
