

Index

A

anticommutator

4.3: Second Quantization

B

Bell's inequality

3.4: Bell's Theorem

Bell's theorem

3.4: Bell's Theorem

Born series

1.6: The Green's Function

boson

4.1: Particle Exchange Symmetry

boson annihilation operator

4.3: Second Quantization

boson creation operator

4.3: Second Quantization

bosons

4.2: Symmetric and Antisymmetric States

C

causal Green's function

1.7: The Green's Function for a Free Particle

coherent state

4.4: Quantum Field Theory

Coulomb gauge

5.3: Quantizing The Electromagnetic Field

D

decay rate

2.4: Fermi's Golden Rule

deflection angle

6.1: A- Partial Wave Analysis

density matrix

3.6: Density Operators

density of states

2.4: Fermi's Golden Rule

density operator

3.6: Density Operators

differential scattering cross section

1.5: The Scattering Amplitude and Scattering Cross Section

Dirac equation

5.2: Dirac's Theory of the Electron

Dirac field theory

5.2: Dirac's Theory of the Electron

Dirac representation

5.2: Dirac's Theory of the Electron

Dirac sea

5.2: Dirac's Theory of the Electron

direct sum

4.3: Second Quantization

Dyson's equations

1.6: The Green's Function

E

Einstein A coefficient

5.4: The Electron-Photon Interaction

EPR paradox

3.3: The Einstein-Podolsky-Rosen "Paradox"

ergodic hypothesis

6.3: C- Entropy

exchange symmetry

4.1: Particle Exchange Symmetry

F

Fermi's Golden Rule

2.4: Fermi's Golden Rule

fermion

4.2: Symmetric and Antisymmetric States

fermions

4.1: Particle Exchange Symmetry

field

4.4: Quantum Field Theory

Field operator

4.4: Quantum Field Theory

Fock space

4.3: Second Quantization

G

gauge field

5.1: Quantization of the Lorentz Force Law

gauge symmetry

5.1: Quantization of the Lorentz Force Law

gauge transformation

5.1: Quantization of the Lorentz Force Law

Green's function

1.6: The Green's Function

H

Hankel function

1.4: Scattering in 2D and 3D

Helmholtz equation

6.1: A- Partial Wave Analysis

hidden variable theory

3.3: The Einstein-Podolsky-Rosen "Paradox"

I

incoming Green's function

1.7: The Green's Function for a Free Particle

information entropy

6.3: C- Entropy

interaction Hamiltonian

5.4: The Electron-Photon Interaction

K

Kronecker product

6.4: D- Numerical Tensor Products

L

Legendre Polynomials

1.9: Example- Uniform Spherical Well in 3D

Lorentz force

5.1: Quantization of the Lorentz Force Law

M

mixed states

3.6: Density Operators

mode amplitude

5.3: Quantizing The Electromagnetic Field

multiple scattering

1.6: The Green's Function

O

occupation number representation

4.3: Second Quantization

outgoing Green's function

1.7: The Green's Function for a Free Particle

P

parity

4.2: Symmetric and Antisymmetric States

parity of the permutation

4.2: Symmetric and Antisymmetric States

partial trace

3.6: Density Operators

partial wave analysis

1.9: Example- Uniform Spherical Well in 3D

6.1: A- Partial Wave Analysis

Pauli exclusion principle

4.2: Symmetric and Antisymmetric States

Photon

5.3: Quantizing The Electromagnetic Field

polarization vector

5.3: Quantizing The Electromagnetic Field

positron

5.2: Dirac's Theory of the Electron

propagator

1.7: The Green's Function for a Free Particle

pure state

3.6: Density Operators

Q

quantum cryptography

3.5: Quantum Cryptography

quantum electrodynamics

5: Quantum Electrodynamics

quantum field theory

4.4: Quantum Field Theory

R

reduced density operator

3.6: Density Operators

reflection coefficient

6.2: B- The Transfer Matrix Method

S

scattering amplitude

1.5: The Scattering Amplitude and Scattering Cross Section

scattering channel

6.1: A- Partial Wave Analysis

scattering matrix

6.1: A- Partial Wave Analysis

scattering potential

1.1: Scattering Experiments on Quantum Particles

second quantization

4.3: Second Quantization

Shannon entropy

6.3: C- Entropy

Spherical Bessel Functions

[6.1: A- Partial Wave Analysis](#)

spherical Hankel function

[1.4: Scattering in 2D and 3D](#)

[6.1: A- Partial Wave Analysis](#)

T

thermodynamic entropy

[6.3: C- Entropy](#)

total scattering cross section

[1.5: The Scattering Amplitude and Scattering Cross Section](#)

transfer matrix

[6.2: B- The Transfer Matrix Method](#)

transfer matrix method

[6.2: B- The Transfer Matrix Method](#)

transition amplitude

[2.4: Fermi's Golden Rule](#)

transition dipole moment

[5.4: The Electron-Photon Interaction](#)

transmission coefficient

[6.2: B- The Transfer Matrix Method](#)

V

vacuum state

[4.3: Second Quantization](#)
