

## Index

### A

Airy pattern  
[2.8: Aberrations](#)

### B

birefringence  
[4.3: Creating and Manipulating Polarisation States](#)

### C

camera obscura  
[3.2: The Camera Obscura](#)  
coherence  
[5.4: Coherence](#)  
coherent sum  
[5.3: Interference of Monochromatic Fields of the Same Frequency](#)  
confocal microscopy  
[6.9: Super-resolution](#)  
Cook triplet lens  
[3.4: Camera in a Smart Phone](#)

### D

depth of focus  
[3.3: The Camera](#)  
diffraction  
[2.2: Introduction](#)  
diffraction limited  
[2.8: Aberrations](#)  
distortion  
[2.8: Aberrations](#)  
double Gauss lens  
[3.4: Camera in a Smart Phone](#)

### E

Einstein coefficients  
[7.3: Amplification](#)  
eye  
[3.5: The Human Eye](#)

### F

Fermat's Principle of Least Action  
[2.4: Some Consequences of Fermat's Principle](#)  
Fermat's principle  
[2.3: Principle of Fermat](#)  
focal length  
[3.3: The Camera](#)

### Fourier optics

[6.8: Fourier Optics](#)

### Fraunhofer diffraction

[6.7: Fraunhofer Diffraction Revisited](#)

### free spectral range

[7.2: Optical Resonator](#)

### H

### hyperbolic materials

[6.9: Super-resolution](#)

### I

### incoherent sum

[5.3: Interference of Monochromatic Fields of the Same Frequency](#)

### J

### Jones matrix

[4.3: Creating and Manipulating Polarisation States](#)  
[4.4: How to verify whether a Jones Matrix is a Linear Polariser or a Wave Plate?](#)

### L

### lens matrix

[2.6: Gaussian Geometrical Optics](#)

### M

### Maxwell's Equations

[1.3: The Maxwell Equations in Vacuum](#)

### O

### optical path length

[2.3: Principle of Fermat](#)

### P

### paraxial rays

[2.6: Gaussian Geometrical Optics](#)

### perfect imaging

[2.5: Perfect Imaging by Conic Sections](#)

### R

### ray matrix

[2.6: Gaussian Geometrical Optics](#)

### real image

[2.6: Gaussian Geometrical Optics](#)

### resonator

[7.2: Optical Resonator](#)

### S

### Seidel aberrations

[2.8: Aberrations](#)

### self coherence function

[5.5: Temporal Coherence and the Michelson Interferometer](#)

### Snell's law of refraction

[1.10: Reflection and Transmission at an Interface](#)  
[2.4: Some Consequences of Fermat's Principle](#)

### spatial coherence

[5.5: Temporal Coherence and the Michelson Interferometer](#)

### spatial light modulator

[6.8: Fourier Optics](#)

### spherical aberration

[2.8: Aberrations](#)

### stability condition

[7.4: Cavities](#)

### STED

[6.9: Super-resolution](#)

### stigmatic systems

[2.5: Perfect Imaging by Conic Sections](#)

### stimulated emission

[7.3: Amplification](#)

Stimulated      Emission      Depletion

### Microscopy

[6.9: Super-resolution](#)

### T

### temporal coherence

[5.5: Temporal Coherence and the Michelson Interferometer](#)

### V

### virtual image

[2.6: Gaussian Geometrical Optics](#)

### W

### wavefront

[2.2: Introduction](#)
