Preface

## 0: Preliminaries

- 0.1: Why Physics?
- 0.2: Physics is Hard!
- 0.3: How to Learn Physics
- 0.4: Basics of Scientific Measurement

## 1: Motion

- 1.1: Vectors
- 1.2: Vector Multiplication
- 1.3: Straight-Line Motion
- 1.4: Kinematics
- 1.5: Graphing
- 1.6: Motion in Multiple Dimensions
- 1.7: Examples of 2-Dimensional Motion
- 1.8: Relative Motion
- Sample Problems

## 2: Force

- 2.1: Forces, Fundamental and Composite
- 2.2: Macroscopic Forces
- 2.3: Forces as Interactions
- 2.4: Effects of Force on Motion
- 2.5: Applications of Newton's Laws
- 2.6: Additional Twists - Constraints
- Sample Problems

## 3: Work and Energy

- 3.1: The Work - Energy Theorem
- 3.2: Work and Energy for Collections of Particles
- 3.3: Conservative and Non-Conservative Forces
- 3.4: Energy Accounting with Conservative Forces: Potential Energy
- 3.5: Energy Accounting with Non-Conservative Forces: Thermal Energy
- 3.6: Mechanical Advantage and Power
- 3.7: Energy Diagrams
- Sample Problems

## 4: Linear Momentum

- 4.1: Repackaging Newton's Second Law
- 4.2: Center of Mass
- 4.3: Momenta of Systems
- 4.4: Momentum and Energy
- 4.5: More Collisions

- [Sample Problems](#)

## 5: Rotations and Rigid Bodies

- [5.1: Rotational Kinematics](#)
- [5.2: Rotational Inertia](#)
- [5.3: Dynamics of Rotating Objects](#)
- [5.4: Torque](#)
- [5.5: Static Equilibrium](#)
- [Sample Problems](#)

## 6: Angular Momentum

- [6.1: Linking Linear and Angular Momentum](#)
- [6.2: Effects of Torque](#)
- [6.3: Applications of Angular Momentum Conservation](#)
- [Sample Problems](#)

## 7: Gravitation

- [7.1: Universal Gravitation](#)
- [7.2: Kepler's Laws](#)
- [7.3: Energy in Gravitational Systems](#)

## 8: Small Oscillations

- [8.1: Simple Harmonic Motion](#)
- [8.2: Other Restoring Forces](#)
- [Sample Problems](#)

[Index](#)

[Glossary](#)
