

TABLE OF CONTENTS

Licensing

1: Waves

- 1.1: Wave Mathematics
- 1.2: Wave Properties
- 1.3: Energy Transmission
- 1.4: Superposition and Interference
- 1.5: Standing Waves
- 1.6: Some Important Math Tricks
- 1.7: Fourier Analysis

2: Physical Optics

- 2.1: Light as a Wave
- 2.2: Double-Slit Interference
- 2.3: Diffraction Gratings
- 2.4: Single-Slit Diffraction
- 2.5: Reflection and Refraction
- 2.6: Polarization

3: "Wait, what?" Experiments Reveal Cracks in Our Understanding

- 3.1: Blackbody Radiation
- 3.2: The Photoelectric Effect
- 3.3: Compton Scattering
- 3.4: Matter Has Wave Properties, Too!
- 3.5: Summarizing this Wave/Particle Mess

4: The Universe is Inherently Probabilistic

- 4.1: Basics of Probability Theory
- 4.2: Continuous Probability Distributions and Probability Density
- 4.3: The Uncertainty of Random Outcomes
- 4.4: Physical Measurements with Random Outcomes
- 4.5: Incompatible Measurements

5: Matter Waves

- 5.1: The Schrödinger Wave Equation
- 5.2: States of Definite Energy
- 5.3: Operators and Observables
- 5.4: Eigenstates and Eigenvalues

6: One-Dimensional Models

- 6.1: Particle-in-a-Box, Part 1
- 6.2: Particle-in-a-Box, Part 2
- 6.3: The Finite Square Well
- 6.4: Tunneling
- 6.5: The Quantum Harmonic Oscillator

- [6.6: The Bohr Model of the Hydrogen Atom](#)

[7: Quantum Theory in Three Dimensions](#)

- [7.1: Schrödinger's Equation in 3-Dimensions](#)
- [7.2: 3-Dimensional Models](#)
- [7.3: Central Forces](#)
- [7.4: Angular Momentum](#)

[8: Intrinsic Angular Momentum – "Spin"](#)

- [8.1: Measuring Angular Momentum](#)
- [8.2: It's Not Rotating!](#)
- [8.3: Fermions and Bosons](#)
- [8.4: Statistics of Identical Particles](#)
