Preface

Prologue

1: A brief History of Classical Mechanics

- 1.1: Introduction
- 1.2: Greek Antiquity
- 1.3: Middle Ages
- 1.4: Age of Enlightenment
- 1.5: Variational methods in physics
- 1.6: The 20th Century Revolution in Physics

2: Review of Newtonian Mechanics

- 2.1: Introduction to Newtonian Mechanics
- 2.2: Newton's Laws of motion
- 2.3: Inertial Frames of reference
- 2.4: First-order Integrals in Newtonian mechanics
- 2.5: Conservation Laws in Classical Mechanics
- 2.6: Motion of finite-sized and many-body systems
- 2.7: Center of Mass of a Many-Body System
- 2.8: Total Linear Momentum of a Many-body System
- 2.9: Angular Momentum of a Many-Body System
- 2.10: Work and Kinetic Energy for a Many-Body System
- 2.11: Virial Theorem
- 2.12: Applications of Newton's Equations of Motion
- 2.13: Solution of many-body equations of motion
- 2.14: Newton's Law of Gravitation
- 2.E: Review of Newtonian Mechanics (Exercises)
- 2.S: Newtonian Mechanics (Summary)

3: Linear Oscillators

- 3.1: Introduction to Linear Oscillators
- 3.2: Linear Restoring Forces
- 3.3: Linearity and Superposition
- 3.4: Geometrical Representations of Dynamical Motion
- 3.5: Linearly-damped Free Linear Oscillator
- 3.6: Sinusoidally-driven, linearly-damped, linear oscillator
- 3.7: Wave equation
- 3.8: Travelling and standing wave solutions of the wave equation
- 3.9: Waveform Analysis
- 3.10: Signal Processing
- 3.11: Wave Propagation
- 3.E: Linear Oscillators (Exercises)
- 3.S: Linear Oscillators (Summary)

4: Nonlinear Systems and Chaos

- 4.1: Introduction to Nonlinear Systems and Chaos
- 4.2: Weak Nonlinearity
- 4.3: Bifurcation and Point Attractors
- 4.4: Limit Cycles
- 4.5: Harmonically-driven, linearly-damped, plane pendulum
- 4.6: Differentiation Between Ordered and Chaotic Motion
- 4.7: Wave Propagation for Non-linear Systems
- 4.E: Nonlinear Systems and Chaos (Exercises)
- 4.S: Nonlinear Systems and Chaos (Summary)

5: Calculus of Variations

- 5.1: Introduction to the Calculus of Variations
- 5.2: Euler's Differential Equation
- 5.3: Applications of Euler's Equation
- 5.4: Selection of the Independent Variable
- 5.5: Functions with Several Independent Variables
- 5.6: Euler's Integral Equation
- 5.7: Constrained Variational Systems
- 5.8: Generalized coordinates in Variational Calculus
- 5.9: Lagrange multipliers for Holonomic Constraints
- 5.10: Geodesic
- 5.11: Variational Approach to Classical Mechanics
- 5.E: Calculus of Variations (Exercises)
- 5.S: Calculus of Variations (Summary)

6: Lagrangian Dynamics

- 6.1: Introduction to Lagrangian Dynamics
- 6.2: Newtonian plausibility argument for Lagrangian mechanics
- 6.3: Lagrange Equations from d'Alembert's Principle
- 6.4: Lagrange equations from Hamilton's Principle
- 6.5: Constrained Systems
- 6.6: Applying the Euler-Lagrange equations to classical mechanics
- 6.7: Applications to unconstrained systems
- 6.8: Applications to systems involving holonomic constraints
- 6.9: Applications involving Non-holonomic Constraints
- 6.10: Velocity-dependent Lorentz force
- 6.11: Time-dependent forces
- 6.12: Impulsive Forces
- 6.13: The Lagrangian versus the Newtonian approach to classical mechanics
- 6.E: Lagrangian Dynamics (Exercises)
- 6.S: Lagrangian Dynamics (Summary)

7: Symmetries, Invariance and the Hamiltonian

- 7.1: Introduction to Symmetries, Invariance, and the Hamiltonian
- 7.2: Generalized Momentum
- 7.3: Invariant Transformations and Noether's Theorem
- 7.4: Rotational invariance and conservation of angular momentum
- 7.5: Cyclic Coordinates
- 7.6: Kinetic Energy in Generalized Coordinates

- 7.7: Generalized Energy and the Hamiltonian Function
- 7.8: Generalized energy theorem
- 7.9: Generalized energy and total energy
- 7.10: Hamiltonian Invariance
- 7.11: Hamiltonian for Cyclic Coordinates
- 7.12: Symmetries and Invariance
- 7.13: Hamiltonian in Classical Mechanics
- 7.E: Symmetries, Invariance and the Hamiltonian (Exercises)
- 7.S: Symmetries, Invariance and the Hamiltonian (Summary)

8: Hamiltonian Mechanics

- 8.1: Introduction
- 8.2: Legendre Transformation between Lagrangian and Hamiltonian mechanics
- 8.3: Hamilton's Equations of Motion
- 8.4: Hamiltonian in Different Coordinate Systems
- 8.5: Applications of Hamiltonian Dynamics
- 8.6: Routhian Reduction
- 8.7: Variable-mass systems
- 8.E: Hamiltonian Mechanics (Exercises)
- 8.S: Hamiltonian Mechanics (Summary)

9: Hamilton's Action Principle

- 9.1: Introduction to Hamilton's Action Principle
- 9.2: Hamilton's Principle of Stationary Action
- 9.3: Lagrangian
- 9.4: Application of Hamilton's Action Principle to Mechanics
- 9.S: Hamilton's Action Principle (Summary)

10: Nonconservative Systems

- 10.1: Introduction to Nonconservative Systems
- 10.2: Origins of Nonconservative Motion
- 10.3: Algebraic Mechanics for Nonconservative Systems
- 10.4: Rayleigh's Dissipation Function
- 10.5: Dissipative Lagrangians
- 10.S: Nonconservative systems (Summary)

11: Conservative two-body Central Forces

- 11.1: Introduction to Conservative two-body Central Forces
- 11.2: Equivalent one-body Representation for two-body motion
- 11.3: Angular Momentum
- 11.4: Equations of Motion
- 11.5: Differential Orbit Equation
- 11.6: Hamiltonian
- 11.7: General Features of the Orbit Solutions
- 11.8: Inverse-square, two-body, central force
- 11.9: Isotropic, linear, two-body, central force
- 11.10: Closed-orbit Stability
- 11.11: The Three-Body Problem
- 11.12: Two-body Scattering
- 11.13: Two-body kinematics

- 11.E: Conservative two-body Central Forces (Exercises)
- 11.S: Conservative two-body Central Forces (Summary)

12: Non-inertial Reference Frames

- 12.1: Introduction to Non-inertial Reference Frames
- 12.2: Translational acceleration of a reference frame
- 12.3: Rotating Reference Frame
- 12.4: Reference Frame Undergoing Rotation Plus Translation
- 12.5: Newton's Law of Motion in a Non-Inertial Frame
- 12.6: Lagrangian Mechanics in a Non-Inertial Frame
- 12.7: Centrifugal Force
- 12.8: Coriolis Force
- 12.9: Routhian Reduction for Rotating Systems
- 12.10: Effective gravitational force near the surface of the Earth
- 12.11: Free Motion on the Earth
- 12.12: Weather systems
- 12.13: Foucault pendulum
- 12.E: Non-inertial reference frames (Exercises)
- 12.S: Non-inertial reference frames (Summary)

13: Rigid-body Rotation

- 13.1: Introduction to Rigid-body Rotation
- 13.2: Rigid-body Coordinates
- 13.3: Rigid-body Rotation about a Body-Fixed Point
- 13.4: Inertia Tensor
- 13.5: Matrix and Tensor Formulations of Rigid-Body Rotation
- 13.6: Principal Axis System
- 13.7: Diagonalize the Inertia Tensor
- 13.8: Parallel-Axis Theorem
- 13.9: Perpendicular-axis Theorem for Plane Laminae
- 13.10: General Properties of the Inertia Tensor
- 13.11: Angular Momentum and Angular Velocity Vectors
- 13.12: Kinetic Energy of Rotating Rigid Body
- 13.13: Euler Angles
- 13.14: Angular Velocity
- 13.15: Kinetic energy in terms of Euler angular velocities
- 13.16: Rotational Invariants
- 13.17: Euler's equations of motion for rigid-body rotation
- 13.18: Lagrange equations of motion for rigid-body rotation
- 13.19: Hamiltonian equations of motion for rigid-body rotation
- 13.20: Torque-free rotation of an inertially-symmetric rigid rotor
- 13.21: Torque-free rotation of an asymmetric rigid rotor
- 13.22: Stability of torque-free rotation of an asymmetric body
- 13.23: Symmetric rigid rotor subject to torque about a fixed point
- 13.24: The Rolling Wheel
- 13.25: Dynamic balancing of wheels
- 13.26: Rotation of Deformable Bodies
- 13.E: Rigid-body Rotation (Exercises)
- 13.S: Rigid-body Rotation (Summary)

14: Coupled Linear Oscillators

- 14.1: Introduction to Coupled Linear Oscillators
- 14.2: Two Coupled Linear Oscillators
- 14.3: Normal Modes
- 14.4: Center of Mass Oscillations
- 14.5: Weak Coupling
- 14.6: General Analytic Theory for Coupled Linear Oscillators
- 14.7: Two-body coupled oscillator systems
- 14.8: Three-body coupled linear oscillator systems
- 14.9: Molecular coupled oscillator systems
- 14.10: Discrete Lattice Chain
- 14.11: Damped Coupled Linear Oscillators
- 14.12: Collective Synchronization of Coupled Oscillators
- 14.E: Coupled linear oscillators (Exercises)
- 14.S: Coupled linear oscillators (Summary)

15: Advanced Hamiltonian Mechanics

- 15.1: Introduction to Advanced Hamiltonian Mechanics
- 15.2: Poisson bracket Representation of Hamiltonian Mechanics
- 15.3: Canonical Transformations in Hamiltonian Mechanics
- 15.4: Hamilton-Jacobi Theory
- 15.5: Action-angle Variables
- 15.6: Canonical Perturbation Theory
- 15.7: Symplectic Representation
- 15.8: Comparison of the Lagrangian and Hamiltonian Formulations
- 15.E: Advanced Hamiltonian Mechanics (Exercises)
- 15.S: Advanced Hamiltonian mechanics (Summary)

16: Analytical Formulations for Continuous Systems

- 16.1: Introduction
- 16.2: The Continuous Uniform Linear Chain
- 16.3: The Lagrangian density formulation for continuous systems
- 16.4: The Hamiltonian density formulation for continuous systems
- 16.5: Linear Elastic Solids
- 16.6: Electromagnetic Field Theory
- 16.7: Ideal Fluid Dynamics
- 16.8: Viscous Fluid Dynamics
- 16.9: Summary and Implications

17: Relativistic Mechanics

- 17.1: Introduction to Relativistic Mechanics
- 17.2: Galilean Invariance
- 17.3: Special Theory of Relativity
- 17.4: Relativistic Kinematics
- 17.5: Geometry of Space-time
- 17.6: Lorentz-Invariant Formulation of Lagrangian Mechanics
- 17.7: Lorentz-invariant formulations of Hamiltonian Mechanics
- 17.8: The General Theory of Relativity
- 17.9: Implications of Relativistic Theory to Classical Mechanics
- 17.E: Relativistic Mechanics (Exercises)

- [17.S: Relativistic Mechanics \(Summary\)](#)

18: The Transition to Quantum Physics

- [18.1: Introduction to Quantum Physics](#)
- [18.2: Brief summary of the origins of quantum theory](#)
- [18.3: Hamiltonian in Quantum Theory](#)
- [18.4: Lagrangian Representation in Quantum Theory](#)
- [18.5: Correspondence Principle](#)
- [18.S: The Transition to Quantum Physics \(Summary\)](#)

19: Mathematical Methods for Classical Mechanics

- [19.1: Introduction](#)
- [19.2: Appendix - Matrix Algebra](#)
- [19.3: Appendix - Vector algebra](#)
- [19.4: Appendix - Orthogonal Coordinate Systems](#)
- [19.5: Appendix - Coordinate transformations](#)
- [19.6: Appendix - Tensor Algebra](#)
- [19.7: Appendix - Aspects of Multivariate Calculus](#)
- [19.8: Appendix - Vector Differential Calculus](#)
- [19.9: Appendix - Vector Integral Calculus](#)
- [19.10: Appendix - Waveform analysis](#)
- [19.11: Bibliography](#)

[Epilogue](#)
