This text is disseminated via the Open Education Resource (OER) LibreTexts Project (<https://LibreTexts.org>) and like the hundreds of other texts available within this powerful platform, it is freely available for reading, printing and "consuming." Most, but not all, pages in the library have licenses that may allow individuals to make changes, save, and print this book. Carefully consult the applicable license(s) before pursuing such effects.

Instructors can adopt existing LibreTexts texts or Remix them to quickly build course-specific resources to meet the needs of their students. Unlike traditional textbooks, LibreTexts' web based origins allow powerful integration of advanced features and new technologies to support learning.

The LibreTexts mission is to unite students, faculty and scholars in a cooperative effort to develop an easy-to-use online platform for the construction, customization, and dissemination of OER content to reduce the burdens of unreasonable textbook costs to our students and society. The LibreTexts project is a multi-institutional collaborative venture to develop the next generation of open-access texts to improve postsecondary education at all levels of higher learning by developing an Open Access Resource environment. The project currently consists of 14 independently operating and interconnected libraries that are constantly being optimized by students, faculty, and outside experts to supplant conventional paper-based books. These free textbook alternatives are organized within a central environment that is both vertically (from advance to basic level) and horizontally (across different fields) integrated.

The LibreTexts libraries are Powered by [NICE CXOne](#) and are supported by the Department of Education Open Textbook Pilot Project, the UC Davis Office of the Provost, the UC Davis Library, the California State University Affordable Learning Solutions Program, and Merlot. This material is based upon work supported by the National Science Foundation under Grant No. 1246120, 1525057, and 1413739.

1.1: Foundations of Culture

Learning Objectives

1. Define culture.
2. Define sub and countercultures

Culture is a complicated word to define, as there are at least six common ways that culture is used in the United States. For the purposes of exploring the communicative aspects of culture, we will define culture as the ongoing negotiation of learned and patterned beliefs, attitudes, values, and behaviors. Unpacking the definition, we can see that culture shouldn't be conceptualized as stable and unchanging. Culture is "negotiated," and as we will learn later in this chapter, culture is dynamic, and cultural changes can be traced and analyzed to better understand why our society is the way it is. The definition also points out that culture is learned, which accounts for the importance of socializing institutions like family, school, peers, and the media. Culture is patterned in that there are recognizable widespread similarities among people within a cultural group. There is also deviation from and resistance to those patterns by individuals and subgroups within a culture, which is why cultural patterns change over time. Last, the definition acknowledges that culture influences our beliefs about what is true and false, our attitudes including our likes and dislikes, our values regarding what is right and wrong, and our behaviors. It is from these cultural influences that our identities are formed.

A more simplistic term to understand by Lustig and Koester (2018) would be *culture* is a "learned set of shared interpretations about beliefs, values, norms and social practices, which affects the behaviors of a relatively large group of people." [1]

The first, and perhaps most crucial, elements of culture we will discuss are its values and beliefs. **Values** are a culture's standard for discerning what is good and just in society. Values are deeply embedded and critical for transmitting and teaching a culture's beliefs. **Beliefs** are the tenets or convictions that people hold to be true. Individuals in a society have specific beliefs, but they also share collective values. To illustrate the difference, Americans commonly believe in the American Dream—that anyone who works hard enough will be successful and wealthy. Underlying this belief is the American value that wealth is good and important.

Values help shape a society by suggesting what is good and bad, beautiful and ugly, sought or avoided. Consider the value that the United States places upon youth. Children represent innocence and purity, while a youthful adult appearance signifies sexuality. Shaped by this value, individuals spend millions of dollars each year on cosmetic products and surgeries to look young and beautiful. The United States also has an individualistic culture, meaning people place a high value on individuality and independence. In contrast, many other cultures are collectivist, meaning the welfare of the group and group relationships are a primary value.

Living up to a culture's values can be difficult. It's easy to value good health, but it's hard to quit smoking. Marital monogamy is valued, but many spouses engage in infidelity. Cultural diversity and equal opportunities for all people are valued in the United States, yet the country's highest political offices have been dominated by white men.

Values often suggest how people should behave, but they don't accurately reflect how people do behave. Values portray an **ideal culture**, the standards society would like to embrace and live up to. But ideal culture differs from **real culture**, the way society actually is, based on what occurs and exists. In an ideal culture, there would be no traffic accidents, murders, poverty, or racial tension. But in real culture, police officers, lawmakers, educators, and social workers constantly strive to prevent or repair those accidents, crimes, and injustices. American teenagers are encouraged to value celibacy. However, the number of unplanned pregnancies among teens reveals that not only is the ideal hard to live up to, but the value alone is not enough to spare teenagers the potential consequences of having sex.

One way societies strive to put values into action is through rewards, sanctions, and punishments. When people observe the norms of society and uphold its values, they are often rewarded. A boy who helps an elderly woman board a bus may receive a smile and a "thank you." A business manager who raises profit margins may receive a quarterly bonus. People **sanction** certain behaviors by giving their support, approval, or permission, or by instilling formal actions of disapproval and nonsupport. Sanctions are a form of **social control**, a way to encourage conformity to cultural norms. Sometimes people conform to norms in anticipation or expectation of positive sanctions: good grades, for instance, may mean praise from parents and teachers. From a criminal justice perspective, properly used social control is also inexpensive crime control. Utilizing social control approaches pushes most people to conform to societal rules, regardless of whether authority figures (such as law enforcement) are present.

When people go against a society's values, they are punished. A boy who shoves an elderly woman aside to board the bus first may receive frowns or even a scolding from other passengers. A business manager who drives away customers will likely be fired. Breaking norms and rejecting values can lead to cultural sanctions such as earning a negative label—lazy, no-good bum—or to legal sanctions, such as traffic tickets, fines, or imprisonment.

Figure 1.1.1: In many parts of Africa and the Middle East, it is considered normal for men to hold hands in friendship. How would Americans react to these two soldiers? (Photo courtesy of Geordie Mott/Wikimedia Commons)

Values are not static; they vary across time and between groups as people evaluate, debate, and change collective societal beliefs. Values also vary from culture to culture. For example, cultures differ in their values about what kinds of physical closeness are appropriate in public. It's rare to see two male friends or coworkers holding hands in the United States where that behavior often symbolizes romantic feelings. But in many nations, masculine physical intimacy is considered natural in public. This difference in cultural values came to light when people reacted to photos of former president George W. Bush holding hands with the Crown Prince of Saudi Arabia in 2005. A simple gesture, such as hand-holding, carries great symbolic differences across cultures.[ii]

Norms

Many examples of culture often describe how people are expected to behave in certain situations—for example, when buying food or boarding a bus. These examples describe the visible and invisible rules of conduct through which societies are structured, or what sociologists call norms. **Norms** define how to behave in accordance with what a society has defined as good, right, and important, and most members of the society adhere to them.

Formal norms are established, written rules. They are behaviors worked out and agreed upon in order to suit and serve the most people. Laws are formal norms, but so are employee manuals, college entrance exam requirements, and “no running” signs at swimming pools. Formal norms are the most specific and clearly stated of the various types of norms, and they are the most strictly enforced. But even formal norms are enforced to varying degrees and are reflected in cultural values.

For example, money is highly valued in the United States, so monetary crimes are punished. It's against the law to rob a bank, and banks go to great lengths to prevent such crimes. People safeguard valuable possessions and install antitheft devices to protect homes and cars. A less strictly enforced social norm is driving while intoxicated. While it's against the law to drive drunk, drinking is for the most part an acceptable social behavior. And though there are laws to punish drunk driving, there are few systems in place to prevent the crime. These examples show a range of enforcement in formal norms.

There are plenty of formal norms, but the list of **informal norms**—casual behaviors that are generally and widely conformed to—is longer. People learn informal norms by observation, imitation, and general socialization. Some informal norms are taught directly—“Kiss your Aunt Edna” or “Use your napkin”—while others are learned by observation, including observations of the consequences when someone else violates a norm. But although informal norms define personal interactions, they extend into other systems as well. In the United States, there are informal norms regarding behavior at fast food restaurants. Customers line up to order their food and leave when they are done. They don't sit down at a table with strangers, sing loudly as they prepare their condiments, or nap in a booth. Most people don't commit even benign breaches of informal norms. Informal norms dictate appropriate behaviors without the need of written rules.

Norms may be further classified as either mores or folkways. **Mores** (mor-ays) are norms that embody the moral views and principles of a group. Violating them can have serious consequences. The strongest mores are legally protected with laws or other formal norms. In the United States, for instance, murder is considered immoral, and it's punishable by law (a formal norm). But more often, mores are judged and guarded by public sentiment (an informal norm). People who violate mores are seen as shameful. They can even be shunned or banned from some groups. The mores of the U.S. school system require that a student's writing be in the student's own words or use special forms (such as quotation marks and a whole system of citation) for crediting other writers. Writing another person's words as if they are one's own has a name—plagiarism. The consequences for violating this norm are severe and usually result in expulsion.

Unlike mores, *folkways* are norms without any moral underpinnings. Rather, folkways direct appropriate behavior in the day-to-day practices and expressions of a culture. They indicate whether to shake hands or kiss on the cheek when greeting another person. They specify whether to wear a tie and blazer or a T-shirt and sandals to an event. In Canada, women can smile and say hello to men on the street. In Egypt, that's not acceptable. In regions in the southern United States, bumping into an acquaintance means stopping to chat. It's considered rude not to, no matter how busy one is. In other regions, people guard their privacy and value time efficiency. A simple nod of the head is enough. Other accepted folkways in the United States may include holding the door open for a stranger or giving someone a gift on their birthday. The rules regarding these folkways may change from culture to culture.

Many folkways are actions we take for granted. People need to act without thinking in order to get seamlessly through daily routines; they can't stop and analyze every action (Sumner 1906). Those who experience culture shock may find that it subsides as they learn the new culture's folkways and are able to move through their daily routines more smoothly. Folkways might be small manners, learned by observation and imitated, but they are by no means trivial. Like mores and laws, these norms help people negotiate their daily lives within a given culture.[iii]

The last aspect of culture we will mention is social practices. *Social practices* are the predictable behavior patterns members of a cultural group tend to follow. The simple activity of children going to school each morning Monday-Friday is an example of a social norm in the United States. When combined these beliefs, values, norms and social practices create a way of living for those members.[iv]

Subcultures & Countercultures[v]

Now that you have a better understanding of culture and what it entails, lets briefly discuss co-cultures.

Figure 1.1.2: Trekkies (or fans of Star Trek) are a subculture; they share specific understandings and meanings that those outside their subculture may not understand. [Image](#) by V Threepio is used under a [CC BY-NC-ND 2.0](#)

A **subculture** is a culture shared and actively participated in by a minority of people within a broader culture. A culture often contains numerous subcultures. Subcultures incorporate large parts of the broader cultures of which they are part, but in specifics they may differ radically. Some subcultures achieve such a status that they acquire a name of their own. Examples of subcultures could include: [bikers](#), [military culture](#), [Bronies](#), and [Star Trek fans \(trekkers or trekkies\)](#).

Figure 1.1.: The Fundamentalist Church of Jesus Christ of Latter-Day Saints (or FLDS), advocates the practice polygamy, making members part of a countercultural group (polygamy is illegal in the United States). [FLDS Eldorado](#) by Randy Mankin is in the public domain.

A **counterculture** is a subculture with the addition that some of its beliefs, values, or norms challenge or even contradict those of the main culture of which it is part.^[12] Examples of countercultures in the U.S. could include: [the hippie movement of the 1960s](#), [the green movement](#), [polygamists](#), [feminist groups](#), [BDSM Communities](#), and [LGBTQ communities](#).

Subcultures bring together like-minded individuals who feel neglected by societal standards and allow them to develop a sense of identity.^[13] Subcultures can be distinctive because of the age, ethnicity, class, location, and/or gender of the members. The qualities that determine a subculture as distinct may be linguistic, aesthetic, religious, political, sexual, geographical, or a combination of

factors. Members of a subculture often signal their membership through a distinctive and symbolic use of style, which includes fashions, mannerisms, and argot.^[13]

1.2: Understanding Cultural Identity

Learning Objectives

1. Define personal, social, and cultural identities.
2. Summarize non-dominant and dominant identity development.
3. Explain why difference matters in the study of culture and identity.

Personal, Social, and Cultural Identities

Ask yourself the question “Who am I?” We develop a sense of who we are based on what is reflected back on us from other people. Our parents, friends, teachers, and the media help shape our identities. While this happens from birth, most people in Western societies reach a stage in adolescence where maturing cognitive abilities and increased social awareness lead them to begin to reflect on who they are. This begins a lifelong process of thinking about who we are now, who we were before, and who we will become (Tatum, B. D., 2000). Our identities make up an important part of our self-concept and can be broken down into three main categories: personal, social, and cultural identities (see [Table “Personal, Social, and Cultural Identities”](#)).

We must avoid the temptation to think of our identities as constant. Instead, our identities are formed through processes that started before we were born and will continue after we are gone; therefore our identities aren’t something we achieve or complete. Two related but distinct components of our identities are our personal and social identities (Spreckels, J. & Kotthoff, H., 2009). **Personal identities** include the components of self that are primarily intrapersonal and connected to our life experiences. For example, I consider myself a puzzle lover, and you may identify as a fan of hip-hop music. Our **social identities** are the components of self that are derived from involvement in social groups with which we are interpersonally committed.

Figure 1.2.1: Pledging a fraternity or sorority is an example of a social identity. [Adaenn](#) – CC BY-NC 2.0.

Table 2.1 Personal, Social, and Cultural Identities

| Personal | Social | Cultural | For example, we may derive aspects |
|-------------------|------------------------------|----------------|------------------------------------|
| Antique Collector | Member of Historical Society | Irish American | |
| Dog Lover | Member of Humane Society | Male/Female | |
| Cyclist | Fraternity/Sorority Member | Greek American | |
| Singer | High School Music Teacher | Multiracial | |
| Shy | Book Club Member | Heterosexual | |
| Athletic | Professional Skier | Gay/Lesbian | |

of our social identity from our family or from a community of fans for a sports team. Social identities differ from personal identities because they are externally organized through membership. Our membership may be voluntary (Greek organization on campus) or involuntary (family) and explicit (we pay dues to our labor union) or implicit (we purchase and listen to hip-hop music). There are innumerable options for personal and social identities. While our personal identity choices express who we are, our social identities align us with particular groups. Through our social identities, we make statements about who we are and who we are not.

Personal identities may change often as people have new experiences and develop new interests and hobbies. A current interest in online video games may give way to an interest in graphic design. Social identities do not change as often because they take more time to develop, as you must become interpersonally invested. For example, if an interest in online video games leads someone to become a member of a MMORPG, or a massively multiplayer online role-playing game community, that personal identity has led to a social identity that is now interpersonal and more entrenched. Cultural identities are based on socially constructed categories that teach us a way of being and include expectations for social behavior or ways of acting (Yep, G. A., 2002). Since we are often a part of them since birth, cultural identities are the least changeable of the three. The ways of being and the social expectations for behavior within cultural identities do change over time, but what separates them from most social identities is their historical roots (Collier, M. J., 1996). For example, think of how ways of being and acting have changed for African Americans since the civil rights movement. Additionally, common ways of being and acting within a cultural identity group are expressed through communication. In order to be accepted as a member of a cultural group, members must be acculturated, essentially learning and using a code that other group members will be able to recognize. We are acculturated into our various cultural identities in obvious and less obvious ways. We may literally have a parent or friend tell us what it means to be a man or a woman. We may also unconsciously consume messages from popular culture that offer representations of gender.

Any of these identity types can be **ascribed** or **avowed**. Ascribed identities are personal, social, or cultural identities that are placed on us by others, while avowed identities are those that we claim for ourselves (Martin & Nakayama, 2010). Sometimes people ascribe an identity to someone else based on stereotypes. You may see a person who likes to read science-fiction books, watches documentaries, has glasses, and collects Star Trek memorabilia and label him or her a nerd. If the person doesn't avow that identity, it can create friction, and that label may even hurt the other person's feelings. But ascribed and avowed identities can match up. To extend the previous example, there has been a movement in recent years to reclaim the label *nerd* and turn it into a positive, and a nerd subculture has been growing in popularity. For example, MC Frontalot, a leader in the nerdcore hip-hop movement, says that being branded a nerd in school was terrible, but now he raps about "nerdy" things like blogs to sold-out crowds (Shipman, 2007). We can see from this example that our ascribed and avowed identities change over the course of our lives, and sometimes they match up and sometimes not.

Although some identities are essentially permanent, the degree to which we are aware of them, also known as salience, changes. The intensity with which we avow an identity also changes based on context. For example, an African American may not have difficulty deciding which box to check on the demographic section of a survey. But if an African American becomes president of her college's Black Student Union, she may more intensely avow her African American identity, which has now become more salient. If she studies abroad in Africa her junior year, she may be ascribed an identity of American by her new African friends rather than African American. For the Africans, their visitor's identity as American is likely more salient than her identity as someone of African descent. If someone is biracial or multiracial, they may change their racial identification as they engage in an identity search. One intercultural communication scholar writes of his experiences as an "Asianlatinoamerican" (Yep, 2002). He notes repressing his Chinese identity as an adolescent living in Peru and then later embracing his Chinese identity and learning about his family history while in college in the United States. This example shows how even national identity fluctuates. Obviously one can change nationality by becoming a citizen of another country, although most people do not. My identity as a US American became very salient for me for the first time in my life when I studied abroad in Sweden.

Throughout modern history, cultural and social influences have established dominant and non-dominant groups (Allen, 2011). Dominant identities historically had and currently have more resources and influence, while non-dominant identities historically had and currently have less resources and influence. It's important to remember that these distinctions are being made at the societal level, not the individual level. There are obviously exceptions, with people in groups considered non-dominant obtaining more resources and power than a person in a dominant group. However, the overall trend is that difference based on cultural groups has been institutionalized, and exceptions do not change this fact. Because of this uneven distribution of resources and power, members of dominant groups are granted privileges while non-dominant groups are at a disadvantage. The main non-dominant groups must face various forms of institutionalized discrimination, including racism, sexism, heterosexism, and ableism. As we

will discuss later, privilege and disadvantage, like similarity and difference, are not “all or nothing.” No two people are completely different or completely similar, and no one person is completely privileged or completely disadvantaged.

Identity Development

There are multiple models for examining identity development. Given our focus on how difference matters, we will examine similarities and differences in non-dominant and dominant identity formation. While the stages in this model help us understand how many people experience their identities, identity development is complex, and there may be variations. We must also remember that people have multiple identities that intersect with each other. So, as you read, think about how circumstances may be different for an individual with multiple nondominant and/or dominant identities.

Non-dominant Identity Development

There are four stages of nondominant identity development (Martin & Nakayama, 2010). The first stage is unexamined identity, which is characterized by a lack of awareness of or lack of interest in one’s identity. For example, a young woman who will later identify as a lesbian may not yet realize that a nondominant sexual orientation is part of her identity. Also, a young African American man may question his teachers or parents about the value of what he’s learning during Black History Month. When a person’s lack of interest in their own identity is replaced by an investment in a dominant group’s identity, they may move to the next stage, which is conformity.

In the conformity stage, an individual internalizes or adopts the values and norms of the dominant group, often in an effort not to be perceived as different. Individuals may attempt to assimilate into the dominant culture by changing their appearance, their mannerisms, the way they talk, or even their name. Moises, a Chicano man interviewed in a research project about identities, narrated how he changed his “Mexican sounding” name to Moses, which was easier for his middle-school classmates and teachers to say (Jones Jr., 2009). He also identified as white instead of Mexican American or Chicano because he saw how his teachers treated the other kids with “brown skin.” Additionally, some gay or lesbian people in this stage of identity development may try to “act straight.” In either case, some people move to the next stage, resistance and separation, when they realize that despite their efforts they are still perceived as different by and not included in the dominant group.

In the resistance and separation stage, an individual with a nondominant identity may shift away from the conformity of the previous stage to engage in actions that challenge the dominant identity group. Individuals in this stage may also actively try to separate themselves from the dominant group, interacting only with those who share their nondominant identity. For example, there has been a Deaf culture movement in the United States for decades. This movement includes people who are hearing impaired and believe that their use of a specific language, American Sign Language (ASL), and other cultural practices constitutes a unique culture, which they symbolize by capitalizing the *D* in *Deaf* (Allen, 2011).

Figure 1.2.3: Many hearing-impaired people in the United States use American Sign Language (ASL), which is recognized as an official language. Quinn Dombrowski – [ASL interpreter](#) – CC BY-SA 2.0.

While this is not a separatist movement, a person who is hearing impaired may find refuge in such a group after experiencing discrimination from hearing people. Staying in this stage may indicate a lack of critical thinking if a person endorses the values of the nondominant group without question.

The integration stage marks a period where individuals with a nondominant identity have achieved a balance between embracing their own identities and valuing other dominant and nondominant identities. Although there may still be residual anger from the discrimination and prejudice they have faced, they may direct this energy into positive outlets such as working to end discrimination for their own or other groups. Moises, the Chicano man I mentioned earlier, now works to support the Chicano community in his city and also has actively supported gay rights and women's rights.

[Dominant Identity Development](#)

Dominant identity development consists of five stages (Martin & Nakayama, 2010). The unexamined stage of dominant identity formation is similar to nondominant in that individuals in this stage do not think about their or others' identities. Although they may be aware of differences—for example, between races and genders—they either don't realize there is a hierarchy that treats some people differently than others or they don't think the hierarchy applies to them. For example, a white person may take notice

that a person of color was elected to a prominent office. However, he or she may not see the underlying reason that it is noticeable—namely, that the overwhelming majority of our country’s leaders are white. Unlike people with a nondominant identity who usually have to acknowledge the positioning of their identity due to discrimination and prejudice they encounter, people with dominant identities may stay in the unexamined stage for a long time.

In the acceptance stage, a person with a dominant identity passively or actively accepts that some people are treated differently than others but doesn’t do anything internally or externally to address it. In the passive acceptance stage, we must be cautious not to blame individuals with dominant identities for internalizing racist, sexist, or heterosexist “norms.” The socializing institutions we discussed earlier (family, peers, media, religion, and education) often make oppression seem normal and natural. For example, I have had students who struggle to see that they are in this stage say things like “I know that racism exists, but my parents taught me to be a good person and see everyone as equal.” While this is admirable, seeing everyone as equal doesn’t make it so. And people who insist that we are all equal may claim that minorities are exaggerating their circumstances or “whining” and just need to “work harder” or “get over it.” The person making these statements acknowledges difference but doesn’t see their privilege or the institutional perpetuation of various “-isms.” Although I’ve encountered many more people in the passive state of acceptance than the active state, some may progress to an active state where they acknowledge inequality and are proud to be in the “superior” group. In either case, many people never progress from this stage. If they do, it’s usually because of repeated encounters with individuals or situations that challenge their acceptance of the status quo, such as befriending someone from a nondominant group or taking a course related to culture.

The resistance stage of dominant identity formation is a major change from the previous in that an individual acknowledges the unearned advantages they are given and feels guilt or shame about it. Having taught about various types of privilege for years, I’ve encountered many students who want to return their privilege or disown it. These individuals may begin to disassociate with their own dominant group because they feel like a curtain has been opened and their awareness of the inequality makes it difficult for them to interact with others in their dominant group. But it’s important to acknowledge that becoming aware of your white privilege, for instance, doesn’t mean that every person of color is going to want to accept you as an ally, so retreating to them may not be the most productive move. While moving to this step is a marked improvement in regards to becoming a more aware and socially just person, getting stuck in the resistance stage isn’t productive, because people are often retreating rather than trying to address injustice. For some, deciding to share what they’ve learned with others who share their dominant identity moves them to the next stage.

People in the redefinition stage revise negative views of their identity held in the previous stage and begin to acknowledge their privilege and try to use the power they are granted to work for social justice. They realize that they can claim their dominant identity as heterosexual, able-bodied, male, white, and so on, and perform their identity in ways that counter norms. A male participant in a research project on identity said the following about redefining his male identity:

I don’t want to assert my maleness the same way that maleness is asserted all around us all the time. I don’t want to contribute to sexism. So I have to be conscious of that. There’s that guilt. But then, I try to utilize my maleness in positive ways, like when I’m talking to other men about male privilege (Jones, Jr., 2009).

The final stage of dominant identity formation is integration. This stage is reached when redefinition is complete and people can integrate their dominant identity into all aspects of their life, finding opportunities to educate others about privilege while also being a responsive ally to people in nondominant identities. As an example, some heterosexual people who find out a friend or family member is gay or lesbian may have to confront their dominant heterosexual identity for the first time, which may lead them through these various stages. As a sign of integration, some may join an organization like PFLAG (Parents, Families, and Friends of Lesbians and Gays), where they can be around others who share their dominant identity as heterosexuals but also empathize with their loved ones.

Figure 1.2.4: Heterosexual people with gay family members or friends may join the group PFLAG (Parents, Families, and Friends of Lesbians and Gays) as a part of the redefinition and/or integration stage of their dominant identity development. Knowing more about various types of identities and some common experiences of how dominant and nondominant identities are formed prepares us to delve into more specifics about why difference matters.

Difference Matters

Whenever we encounter someone, we notice similarities and differences. While both are important, it is often the differences that are highlighted and that contribute to communication troubles. We don't only see similarities and differences on an individual level. In fact, we also place people into in-groups and out-groups based on the similarities and differences we perceive. This is important because we then tend to react to someone we perceive as a member of an out-group based on the characteristics we attach to the group rather than the individual (Allen, 2011). In these situations, it is more likely that stereotypes and prejudice will influence our communication. Learning about difference and why it matters will help us be more competent communicators. The flip side of emphasizing difference is to claim that no differences exist and that you see everyone as a human being. Rather than trying to ignore difference and see each person as a unique individual, we should know the history of how differences came to be so socially and culturally significant and how they continue to affect us today.

Culture and identity are complex. You may be wondering how some groups came to be dominant and others nondominant. These differences are not natural, which can be seen as we unpack how various identities have changed over time in the next section. There is, however, an ideology of domination that makes it seem natural and normal to many that some people or groups will always have power over others (Allen, 2011). In fact, hierarchy and domination, although prevalent throughout modern human history, were likely not the norm among early humans. So one of the first reasons difference matters is that people and groups are

treated unequally, and better understanding how those differences came to be can help us create a more just society. Difference also matters because demographics and patterns of interaction are changing.

In the United States, the population of people of color is increasing and diversifying, and visibility for people who are gay or lesbian and people with disabilities has also increased. The 2010 Census shows that the Hispanic and Latino/a populations in the United States are now the second largest group in the country, having grown 43 percent since the last census in 2000 (Saenz, 2011). By 2030, racial and ethnic minorities will account for one-third of the population (Allen, 2011). Additionally, legal and social changes have created a more open environment for sexual minorities and people with disabilities. These changes directly affect our interpersonal relationships. The workplace is one context where changing demographics has become increasingly important. Many organizations are striving to comply with changing laws by implementing policies aimed at creating equal access and opportunity. Some organizations are going further than legal compliance to try to create inclusive climates where diversity is valued because of the interpersonal and economic benefits it has the potential to produce.

“Getting Real”- Diversity Training

Businesses in the United States spend \$200 to \$300 million a year on diversity training, but is it effective? (Vedantam, 2008). If diversity training is conducted to advance a company’s business goals and out of an understanding of the advantages that a diversity of background and thought offer a company, then the training is more likely to be successful. Many companies conduct mandatory diversity training based on a belief that they will be in a better position in court if a lawsuit is brought against them. However, research shows that training that is mandatory and undertaken only to educate people about the legal implications of diversity is ineffective and may even hurt diversity efforts. A commitment to a diverse and inclusive workplace environment must include a multipronged approach. Experts recommend that a company put a staff person in charge of diversity efforts, and some businesses have gone as far as appointing a “chief diversity officer” (Cullen, 2007). The US Office of Personnel Management offers many good guidelines for conducting diversity training: create learning objectives related to the mission of the organization, use tested and appropriate training methods and materials, provide information about course content and expectations to employees ahead of training, provide the training in a supportive and noncoercive environment, use only experienced and qualified instructors, and monitor/evaluate training and revise as needed (US Office of Personnel Management, 2011). With these suggestions in mind, the increasingly common “real-world” event of diversity training is more likely to succeed.

1. Have you ever participated in any diversity training? If so, what did you learn or take away from the training? Which of the guidelines listed did your training do well or poorly on?
2. Do you think diversity training should be mandatory or voluntary? Why?
3. From what you’ve learned so far in this book, what communication skills are important for a diversity trainer to have?

We can now see that difference matters due to the inequalities that exist among cultural groups and due to changing demographics that affect our personal and social relationships. Unfortunately, there are many obstacles that may impede our valuing of difference (Allen, 2011). Individuals with dominant identities may not validate the experiences of those in nondominant groups because they do not experience the oppression directed at those with nondominant identities. Further, they may find it difficult to acknowledge that not being aware of this oppression is due to privilege associated with their dominant identities. Because of this lack of recognition of oppression, members of dominant groups may minimize, dismiss, or question the experiences of nondominant groups and view them as “complainers” or “whiners.” Recall from our earlier discussion of identity formation that people with dominant identities may stay in the unexamined or acceptance stages for a long time. Being stuck in these stages makes it much more difficult to value difference.

Members of nondominant groups may have difficulty valuing difference due to negative experiences with the dominant group, such as not having their experiences validated. Both groups may be restrained from communicating about difference due to norms of political correctness, which may make people feel afraid to speak up because they may be perceived as insensitive or racist. All these obstacles are common and they are valid. However, as we will learn later, developing intercultural communication competence can help us gain new perspectives, become more mindful of our communication, and intervene in some of these negative cycles.

Key Takeaways

- Culture is an ongoing negotiation of learned patterns of beliefs, attitudes, values, and behaviors.
- Each of us has personal, social, and cultural identities.

- Personal identities are components of self that are primarily intrapersonal and connect to our individual interests and life experiences.
- Social identities are components of self that are derived from our involvement in social groups to which we are interpersonally invested.
- Cultural identities are components of self based on socially constructed categories that teach us a way of being and include expectations for our thoughts and behaviors.
- Nondominant identity formation may include a person moving from unawareness of the importance of their identities, to adopting the values of dominant society, to separating from dominant society, to integrating components of identities.
- Dominant identity formation may include a person moving from unawareness of their identities, to accepting the identity hierarchy, to separation from and guilt regarding the dominant group, to redefining and integrating components of identities.
- Difference matters because people are treated differently based on their identities and demographics and patterns of interaction are changing. Knowing why and how this came to be and how to navigate our increasingly diverse society can make us more competent communicators.

Exercises

1. List some of your personal, social, and cultural identities. Are there any that relate? If so, how? For your cultural identities, which ones are dominant and which ones are nondominant? What would a person who looked at this list be able to tell about you?
2. Describe a situation in which someone ascribed an identity to you that didn't match with your avowed identities. Why do you think the person ascribed the identity to you? Were there any stereotypes involved?
3. Getting integrated: Review the section that explains why difference matters. Discuss the ways in which difference may influence how you communicate in each of the following contexts: academic, professional, and personal.

1.3: Social Construction of Cultural Identity

Learning Objectives

1. Define the social constructionist view of culture and identity.
2. Understand Race relations.
3. Trace the historical development and construction of the four cultural identities discussed.
4. Discuss how each of the four cultural identities discussed affects and/or relates to communication.

We can get a better understanding of current cultural identities by unpacking how they came to be. By looking at history, we can see how cultural identities that seem to have existed forever actually came to be constructed for various political and social reasons and how they have changed over time. Communication plays a central role in this construction. As we have already discussed, our identities are relational and communicative; they are also constructed. Social constructionism is a view that argues the self is formed through our interactions with others and in relationship to social, cultural, and political contexts (Allen, 2011). In this section, we'll explore how the cultural identities of race, gender, sexual orientation, and ability have been constructed in the United States and how communication relates to those identities. There are other important identities that could be discussed, like religion, age, nationality, and class. Although they are not given their own section, consider how those identities may intersect with the identities discussed next.

Race

Would it surprise you to know that human beings, regardless of how they are racially classified, share 99.9 percent of their DNA? This finding by the Human Genome Project asserts that race is a social construct, not a biological one. The American Anthropological Association agrees, stating that race is the product of “historical and contemporary social, economic, educational, and political circumstances” (Allen, 2011). Therefore, we'll define **race** as a socially constructed category based on differences in appearance that has been used to create hierarchies that privilege some and disadvantage others.

Figure 1.3.1: There is actually no biological basis for racial classification among humans, as we share 99.9 percent of our DNA. Evelyn – [friends](#) – CC BY-NC-ND 2.0.

Race didn't become a socially and culturally recognized marker until European colonial expansion in the 1500s. As Western Europeans traveled to parts of the world previously unknown to them and encountered people who were different from them, a hierarchy of races began to develop that placed lighter skinned Europeans above darker skinned people. At the time, newly developing fields in natural and biological sciences took interest in examining the new locales, including the plant and animal life, natural resources, and native populations. Over the next three hundred years, science that we would now undoubtedly recognize as flawed, biased, and racist legitimated notions that native populations were less evolved than white Europeans, often calling them savages. In fact, there were scientific debates as to whether some of the native populations should be considered human or animal. Racial distinctions have been based largely on phenotypes, or physiological features such as skin color, hair texture, and body/facial features. Western “scientists” used these differences as “proof” that native populations were less evolved than the Europeans, which helped justify colonial expansion, enslavement, genocide, and exploitation on massive scales (Allen, 2011). Even though there is a consensus among experts that race is social rather than biological, we can't deny that race still has meaning in our society and affects people as if it were “real.”

Given that race is one of the first things we notice about someone, it's important to know how race and communication relate (Allen, 2011). Discussing race in the United States is difficult for many reasons. One is due to uncertainty about language use.

People may be frustrated by their perception that labels change too often or be afraid of using an “improper” term and being viewed as racially insensitive. It is important, however, that we not let political correctness get in the way of meaningful dialogues and learning opportunities related to difference. Learning some of the communicative history of race can make us more competent communicators and open us up to more learning experiences.

Racial classifications used by the government and our regular communication about race in the United States have changed frequently, which further points to the social construction of race. Currently, the primary racial groups in the United States are African American, Asian American, European American, Latino/a, and Native American, but a brief look at changes in how the US Census Bureau has defined race clearly shows that this hasn’t always been the case (see Table 3.1 “Racial Classifications in the US Census”). In the 1900s alone, there were twenty-six different ways that race was categorized on census forms (Allen, 2011). The way we communicate about race in our regular interactions has also changed, and many people are still hesitant to discuss race for fear of using “the wrong” vocabulary.

Table 3.1 Racial Classifications in the US Census. Source: Adapted from Brenda J. Allen, Difference Matters: Communicating Social Identity (Long Grove, IL: Waveland Press, 2011), 71–72.

| Year(s) | Development |
|------------|--|
| 1790 | No category for race |
| 1800s | Race was defined by the percentage of African “blood.” <i>Mulatto</i> was one black and one white parent, <i>quadroon</i> was one-quarter African blood, and <i>octoroon</i> was one-eighth. |
| 1830–1940 | The term <i>color</i> was used instead of <i>race</i> . |
| 1900 | Racial categories included white, black, Chinese, Japanese, and Indian. Census takers were required to check one of these boxes based on visual cues. Individuals did not get to select a racial classification on their own until 1970. |
| 1950 | The term <i>color</i> was dropped and replaced by <i>race</i> . |
| 1960, 1970 | Both <i>race</i> and <i>color</i> were used on census forms. |
| 1980–2010 | <i>Race</i> again became the only term. |
| 2000 | Individuals were allowed to choose more than one racial category for the first time in census history. |
| 2010 | The census included fifteen racial categories and an option to write in races not listed on the form. |

The five primary racial groups noted previously can still be broken down further to specify a particular region, country, or nation. For example, Asian Americans are diverse in terms of country and language of origin and cultural practices. While the category of Asian Americans can be useful when discussing broad trends, it can also generalize among groups, which can lead to stereotypes. You may find that someone identifies as Chinese American or Korean American instead of Asian American. In this case, the label further highlights a person’s cultural lineage. We should not assume, however, that someone identifies with his or her cultural lineage, as many people have more in common with their US American peers than a culture that may be one or more generations removed.

History and personal preference also influence how we communicate about race. Culture and communication scholar Brenda Allen notes that when she was born in 1950, her birth certificate included an *N* for Negro. Later she referred to herself as *colored* because that’s what people in her community referred to themselves as. During and before this time, the term *black* had negative connotations and would likely have offended someone. There was a movement in the 1960s to reclaim the word *black*, and the slogan “black is beautiful” was commonly used. Brenda Allen acknowledges the newer label of *African American* but notes that she still prefers *black*. The terms *colored* and *Negro* are no longer considered appropriate because they were commonly used during a time when black people were blatantly discriminated against. Even though that history may seem far removed to some, it is not to others. Currently, the terms *African American* and *black* are frequently used, and both are considered acceptable. The phrase *people of color* is acceptable for most and is used to be inclusive of other racial minorities. If you are unsure what to use, you could always observe how a person refers to himself or herself, or you could ask for his or her preference. In any case, a competent communicator defers to and respects the preference of the individual.

The label *Latin American* generally refers to people who live in Central American countries. Although Spain colonized much of what is now South and Central America and parts of the Caribbean, the inhabitants of these areas are now much more diverse. Depending on the region or country, some people primarily trace their lineage to the indigenous people who lived in these areas before colonization, or to a Spanish and indigenous lineage, or to other combinations that may include European, African, and/or indigenous heritage.

Latina and *Latino* are labels that are preferable to *Hispanic* for many who live in the United States and trace their lineage to South and/or Central America and/or parts of the Caribbean. Scholars who study Latina/o identity often use the label *Latina/o* in their writing to acknowledge women who avow that identity label (Calafell, 2007). In verbal communication you might say “Latina” when referring to a particular female or “Latino” when referring to a particular male of Latin American heritage. When referring to the group as a whole, you could say “Latinas and Latinos” instead of just “Latinos,” which would be more gender inclusive. While *Hispanic* is used by the US Census, it refers primarily to people of Spanish origin, which doesn’t account for the diversity of background of many Latinos/as. The term *Hispanic* also highlights the colonizer’s influence over the indigenous, which erases a history that is important to many. Additionally, there are people who claim Spanish origins and identify culturally as Hispanic but racially as white. Labels such as *Puerto Rican* or *Mexican American*, which further specify region or country of origin, may also be used. Just as with other cultural groups, if you are unsure of how to refer to someone, you can always ask for and honor someone’s preference.

The history of immigration in the United States also ties to the way that race has been constructed. The metaphor of the melting pot has been used to describe the immigration history of the United States but doesn’t capture the experiences of many immigrant groups (Allen, 2011). Generally, immigrant groups who were white, or light skinned, and spoke English were better able to assimilate, or melt into the melting pot. But immigrant groups that we might think of as white today were not always considered so. Irish immigrants were discriminated against and even portrayed as black in cartoons that appeared in newspapers. In some Southern states, Italian immigrants were forced to go to black schools, and it wasn’t until 1952 that Asian immigrants were allowed to become citizens of the United States. All this history is important, because it continues to influence communication among races today.

Think About It . . . Race As a Social Construct

The following article [THE SOCIAL CONSTRUCTION OF RACE: SOME OBSERVATIONS ON ILLUSION, FABRICATION, AND CHOICE](#) explores the origins of the idea of race and how race is constructed. Read to page 21, were you aware of this information previously? How does this affect your ideas about the word race?

Interracial Communication

Race and communication are related in various ways. Racism influences our communication about race and is not an easy topic for most people to discuss. Today, people tend to view racism as overt acts such as calling someone a derogatory name or discriminating against someone in thought or action. However, there is a difference between racist acts, which we can attach to an individual, and institutional racism, which is not as easily identifiable. It is much easier for people to recognize and decry racist actions than it is to realize that racist patterns and practices go through societal institutions, which means that racism exists and doesn’t have to be committed by any one person. As competent communicators and critical thinkers, we must challenge ourselves to be aware of how racism influences our communication at individual and societal levels.

We tend to make assumptions about people’s race based on how they talk, and often these assumptions are based on stereotypes. Dominant groups tend to define what is correct or incorrect usage of a language, and since language is so closely tied to identity, labeling a group’s use of a language as incorrect or deviant challenges or negates part of their identity (Yancy, 2011). We know there isn’t only one way to speak English, but there have been movements to identify a standard. This becomes problematic when we realize that “standard English” refers to a way of speaking English that is based on white, middle-class ideals that do not match up with the experiences of many. When we create a standard for English, we can label anything that deviates from that “nonstandard English.” Differences between standard English and what has been called “Black English” have gotten national attention through debates about whether or not instruction in classrooms should accommodate students who do not speak standard

English. Education plays an important role in language acquisition, and class relates to access to education. In general, whether someone speaks standard English themselves or not, they tend to negatively judge people whose speech deviates from the standard.

Another national controversy has revolved around the inclusion of Spanish in common language use, such as Spanish as an option at ATMs, or other automated services, and Spanish language instruction in school for students who don't speak or are learning to speak English. As was noted earlier, the Latino/a population in the United States is growing fast, which has necessitated inclusion of Spanish in many areas of public life. This has also created a backlash, which some scholars argue is tied more to the race of the immigrants than the language they speak and a fear that white America could be engulfed by other languages and cultures (Speicher, 2002). This backlash has led to a revived movement to make English the official language of the United States.

Figure 1.3.2: The “English only” movement of recent years is largely a backlash targeted at immigrants from Spanish-speaking countries. [Wikimedia Commons](#) – public domain. Courtesy of www.CGPGrey.com.

The US Constitution does not stipulate a national language, and Congress has not designated one either. While nearly thirty states have passed English-language legislation, it has mostly been symbolic, and court rulings have limited any enforceability (Zuckerman, 2010). The Linguistic Society of America points out that immigrants are very aware of the social and economic advantages of learning English and do not need to be forced. They also point out that the United States has always had many languages represented, that national unity hasn't rested on a single language, and that there are actually benefits to having a population that is multilingual (Linguistic Society of America, 2011). Interracial communication presents some additional verbal challenges.

Code-switching involves changing from one way of speaking to another between or within interactions. Some people of color may engage in code-switching when communicating with dominant group members because they fear they will be negatively judged. Adopting the language practices of the dominant group may minimize perceived differences. This code-switching creates a linguistic dual consciousness in which people are able to maintain their linguistic identities with their in-group peers but can still

acquire tools and gain access needed to function in dominant society (Yancy, 2011). White people may also feel anxious about communicating with people of color out of fear of being perceived as racist. In other situations, people in dominant groups may spotlight nondominant members by asking them to comment on or educate others about their race (Allen, 2011). For example, I once taught at a private university that was predominantly white. Students of color talked to me about being asked by professors to weigh in on an issue when discussions of race came up in the classroom. While a professor may have been well-intentioned, spotlighting can make a student feel conspicuous, frustrated, or defensive. Additionally, I bet the professors wouldn't think about asking a white, male, or heterosexual student to give the perspective of their whole group.

Gender

When we first meet a newborn baby, we ask whether it's a boy or a girl. This question illustrates the importance of gender in organizing our social lives and our interpersonal relationships. A Canadian family became aware of the deep emotions people feel about gender and the great discomfort people feel when they can't determine gender when they announced to the world that they were not going to tell anyone the gender of their baby, aside from the baby's siblings. Their desire for their child, named Storm, to be able to experience early life without the boundaries and categories of gender brought criticism from many (Davis & James, 2011). Conversely, many parents consciously or unconsciously "code" their newborns in gendered ways based on our society's associations of pink clothing and accessories with girls and blue with boys. While it's obvious to most people that colors aren't gendered, they take on new meaning when we assign gendered characteristics of masculinity and femininity to them. Just like race, gender is a socially constructed category. While it is true that there are biological differences between who we label male and female, the meaning our society places on those differences is what actually matters in our day-to-day lives. And the biological differences are interpreted differently around the world, which further shows that although we think gender is a natural, normal, stable way of classifying things, it is actually not. There is a long history of appreciation for people who cross gender lines in Native American and South Central Asian cultures, to name just two.

You may have noticed I use the word *gender* instead of *sex*. That's because **gender** is an identity based on internalized cultural notions of masculinity and femininity that is constructed through communication and interaction. There are two important parts of this definition to unpack. First, we internalize notions of gender based on socializing institutions, which helps us form our gender identity. Then we attempt to construct that gendered identity through our interactions with others, which is our gender expression. Sex is based on biological characteristics, including external genitalia, internal sex organs, chromosomes, and hormones (Wood, 2005). While the biological characteristics between men and women are obviously different, it's the meaning that we create and attach to those characteristics that makes them significant. The cultural differences in how that significance is ascribed are proof that "our way of doing things" is arbitrary. For example, cross-cultural research has found that boys and girls in most cultures show both aggressive and nurturing tendencies, but cultures vary in terms of how they encourage these characteristics between genders. In a group in Africa, young boys are responsible for taking care of babies and are encouraged to be nurturing (Wood, 2005).

Gender has been constructed over the past few centuries in political and deliberate ways that have tended to favor men in terms of power. And various academic fields joined in the quest to "prove" there are "natural" differences between men and women. While the "proof" they presented was credible to many at the time, it seems blatantly sexist and inaccurate today. In the late 1800s and early 1900s, scientists who measure skulls, also known as craniometrists, claimed that men were more intelligent than women because they had larger brains. Leaders in the fast-growing fields of sociology and psychology argued that women were less evolved than men and had more in common with "children and savages" than an adult (white) males (Allen, 2011). Doctors and other decision makers like politicians also used women's menstrual cycles as evidence that they were irrational, or hysterical, and therefore couldn't be trusted to vote, pursue higher education, or be in a leadership position. These are just a few of the many instances of how knowledge was created by seemingly legitimate scientific disciplines that we can now clearly see served to empower men and disempower women. This system is based on the ideology of patriarchy, which is a system of social structures and practices that maintains the values, priorities, and interests of men as a group (Wood, 2005). One of the ways patriarchy is maintained is by its relative invisibility. While women have been the focus of much research on gender differences, males have been largely unexamined. Men have been treated as the "generic" human being to which others are compared. But that ignores that fact that men have a gender, too. Masculinities studies have challenged that notion by examining how masculinities are performed.

There have been challenges to the construction of gender in recent decades. Since the 1960s, scholars and activists have challenged established notions of what it means to be a man or a woman. The women's rights movement in the United States dates back to the 1800s, when the first women's rights convention was held in Seneca Falls, New York, in 1848 (Wood, 2005). Although most women's rights movements have been led by white, middle-class women, there was overlap between those involved in the abolitionist movement to end slavery and the beginnings of the women's rights movement. Although some of the leaders of the

early women's rights movement had class and education privilege, they were still taking a risk by organizing and protesting. Black women were even more at risk, and Sojourner Truth, an emancipated slave, faced those risks often and gave a much noted extemporaneous speech at a women's rights gathering in Akron, Ohio, in 1851, which came to be called "Ain't I a Woman?" (Wood, 2005) Her speech highlighted the multiple layers of oppression faced by black women.

Think About It . . . "Ain't I a Woman?"

Watch American actress and activist Alfre Woodard perform Sojourner Truth's famous speech "Ain't I a Woman?". What was the heart of Sojourner's message? How does this speech make yo u feel? Why?

Feminism as an intellectual and social movement advanced women's rights and our overall understanding of gender. Feminism has gotten a bad reputation based on how it has been portrayed in the media and by some politicians. When I teach courses about gender, I often ask my students to raise their hand if they consider themselves feminists. I usually only have a few, if any, who do. I've found that students I teach are hesitant to identify as a feminist because of connotations of the word. However, when I ask students to raise their hand if they believe women have been treated unfairly and that there should be more equity, most students raise their hand. Gender and communication scholar Julia Wood has found the same trend and explains that a desire to make a more equitable society for everyone is at the root of feminism. She shares comments from a student that capture this disconnect: (Wood, 2005)

I would never call myself a feminist, because that word has so many negative connotations. I don't hate men or anything, and I'm not interested in protesting. I don't want to go around with hacked-off hair and no makeup and sit around bashing men. I do think women should have the same kinds of rights, including equal pay for equal work. But I wouldn't call myself a feminist.

It's important to remember that there are many ways to be a feminist and to realize that some of the stereotypes about feminism are rooted in sexism and homophobia, in that feminists are reduced to "men haters" and often presumed to be lesbians. The feminist movement also gave some momentum to the transgender rights movement. Transgender is an umbrella term for people whose gender identity and/or expression do not match the gender they were assigned by birth. Transgender people may or may not seek medical intervention like surgery or hormone treatments to help match their physiology with their gender identity. The term *transgender* is the term that the present trans community uses and identifies with. Older terms that people used to refer to those who were transgender included *transsexual*, *transvestite*, and *cross-dresser*, although these words are not as appropriate or used as often in the present. As with other groups, it is best to allow someone to self-identify first and then honor their preferred label. If you are unsure of which pronouns to use when addressing someone, you can use gender-neutral language or you can use the pronoun that matches with how they are presenting. If someone has long hair, make-up, and a dress on, but you think their biological sex is male due to other cues, it would be polite to address them with female pronouns, since that is the gender identity they are expressing.

Gender as a cultural identity has implications for many aspects of our lives, including real-world contexts like education and work. Schools are primary grounds for socialization, and the educational experience for males and females is different in many ways from preschool through college. Although not always intentional, schools tend to recreate the hierarchies and inequalities that exist in society. Given that we live in a patriarchal society, there are communicative elements present in school that support this (Allen, 2011). For example, teachers are more likely to call on and pay attention to boys in a classroom, giving them more feedback in the form of criticism, praise, and help. This sends an implicit message that boys are more worthy of attention and valuable than girls. Teachers are also more likely to lead girls to focus on feelings and appearance and boys to focus on competition and achievement. The focus on appearance for girls can lead to anxieties about body image. Gender inequalities are also evident in the administrative structure of schools, which puts males in positions of authority more than females. While females make up 75 percent of the educational workforce, only 22 percent of superintendents and 8 percent of high school principals are women. Similar trends exist in colleges and universities, with women only accounting for 26 percent of full professors. These inequalities in schools correspond to larger inequalities in the general workforce. While there are more women in the workforce now than ever before, they still face a glass ceiling, which is a barrier for promotion to upper management. Many of my students have been surprised at the continuing pay gap that exists between men and women. In 2010, women earned about seventy-seven cents to every dollar earned by men (National Committee on Pay Equity, 2011). To put this into perspective, the National Committee on Pay Equity started an event

called Equal Pay Day. In 2011, Equal Pay Day was on April 11. This signifies that for a woman to earn the same amount of money a man earned in a year, she would have to work more than three months extra, until April 11, to make up for the difference (National Committee on Pay Equity, 2011).

Sexuality

While race and gender are two of the first things we notice about others, sexuality is often something we view as personal and private. Although many people hold a view that a person’s sexuality should be kept private, this isn’t a reality for our society. One only needs to observe popular culture and media for a short time to see that sexuality permeates much of our public discourse.

Sexuality relates to culture and identity in important ways that extend beyond sexual orientation, just as race is more than the color of one’s skin and gender is more than one’s biological and physiological manifestations of masculinity and femininity. Sexuality isn’t just physical; it is social in that we communicate with others about sexuality (Allen, 2011). Sexuality is also biological in that it connects to physiological functions that carry significant social and political meaning like puberty, menstruation, and pregnancy. Sexuality connects to public health issues like sexually transmitted infections (STIs), sexual assault, sexual abuse, sexual harassment, and teen pregnancy. Sexuality is at the center of political issues like abortion, sex education, and gay and lesbian rights. While all these contribute to sexuality as a cultural identity, the focus in this section is on sexual orientation.

The most obvious way sexuality relates to identity is through sexual orientation. Sexual orientation refers to a person’s primary physical and emotional sexual attraction and activity. The terms we most often use to categorize sexual orientation are *heterosexual*, *gay*, *lesbian*, and *bisexual*. Gays, lesbians, and bisexuals are sometimes referred to as sexual minorities. While the term *sexual preference* has been used previously, *sexual orientation* is more appropriate, since *preference* implies a simple choice. Although someone’s preference for a restaurant or actor may change frequently, sexuality is not as simple. The term *homosexual* can be appropriate in some instances, but it carries with it a clinical and medicalized tone. As you will see in the timeline that follows, the medical community has a recent history of “treating homosexuality” with means that most would view as inhumane today. So many people prefer a term like *gay*, which was chosen and embraced by gay people, rather than *homosexual*, which was imposed by a then discriminatory medical system.

The gay and lesbian rights movement became widely recognizable in the United States in the 1950s and continues on today, as evidenced by prominent issues regarding sexual orientation in national news and politics. National and international groups like the Human Rights Campaign advocate for rights for lesbian, gay, lesbian, bisexual, transgender, and queer (LGBTQ) communities. While these communities are often grouped together within one acronym (LGBTQ), they are different. Gays and lesbians constitute the most visible of the groups and receive the most attention and funding. Bisexuals are rarely visible or included in popular cultural discourses or in social and political movements. Transgender issues have received much more attention in recent years, but transgender identity connects to gender more than it does to sexuality. Last, *queer* is a term used to describe a group that is diverse in terms of identities but usually takes a more activist and at times radical stance that critiques sexual categories. While *queer* was long considered a derogatory label, and still is by some, the queer activist movement that emerged in the 1980s and early 1990s reclaimed the word and embraced it as a positive. As you can see, there is a diversity of identities among sexual minorities, just as there is variation within races and genders.

As with other cultural identities, notions of sexuality have been socially constructed in different ways throughout human history. Sexual orientation didn’t come into being as an identity category until the late 1800s. Before that, sexuality was viewed in more physical or spiritual senses that were largely separate from a person’s identity. Table 3.2 “Developments Related to Sexuality, Identity, and Communication” traces some of the developments relevant to sexuality, identity, and communication that show how this cultural identity has been constructed over the past 3,000 years.

Table 3.2 Developments Related to Sexuality, Identity, and Communication. Source: Adapted from Brenda J. Allen, Difference Matters: Communicating Social Identity (Long Grove, IL: Waveland Press, 2011), 117–25; and University of Denver Queer and Ally Commission, “Lesbian, Gay, Bisexual, Transgender, Intersex, and Queer History,” Queer Ally Training Manual, 2008.

| Year(s) | Development |
|------------------|---|
| 1400 BCE–565 BCE | During the Greek and Roman era, there was no conception of sexual orientation as an identity. However, sexual relationships between men were accepted for some members of society. Also at this time, Greek poet Sappho wrote about love between women. |
| 533 | Byzantine Emperor Justinian makes adultery and same-sex sexual acts punishable by death. |

| Year(s) | Development |
|-----------|--|
| 1533 | Civil law in England indicates the death penalty can be given for same-sex sexual acts between men. |
| 1810 | Napoleonic Code in France removes all penalties for any sexual activity between consenting adults. |
| 1861 | England removes death penalty for same-sex sexual acts. |
| 1892 | The term <i>heterosexuality</i> is coined to refer a form of “sexual perversion” in which people engage in sexual acts for reasons other than reproduction. |
| 1897 | Dr. Magnus Hirschfield founds the Scientific Humanitarian Committee in Berlin. It is the first gay rights organization. |
| 1900–1930 | Doctors “treat” homosexuality with castration, electro-shock therapy, and incarceration in mental hospitals. |
| 1924 | The first gay rights organization in the United States, the Chicago Society for Human Rights, is founded. |
| 1933–44 | Tens of thousands of gay men are sent to concentration camps under Nazi rule. The prisoners are forced to wear pink triangles on their uniforms. The pink triangle was later reclaimed as a symbol of gay rights. |
| 1934 | The terms <i>heterosexuality</i> and <i>homosexuality</i> appear in Webster’s dictionary with generally the same meaning the terms hold today. |
| 1948 | American sexologist Alfred Kinsey’s research reveals that more people than thought have engaged in same-sex sexual activity. His research highlights the existence of bisexuality. |
| 1969 | On June 27, patrons at the Stonewall Inn in New York City fight back as police raid the bar (a common practice used by police at the time to harass gay people). “The Stonewall Riot,” as it came to be called, was led by gay, lesbian, and transgender patrons of the bar, many of whom were working class and/or people of color. |
| 1974 | The American Psychiatric Association removes its reference to homosexuality as a mental illness. |
| 1999 | The Vermont Supreme Court rules that the state must provide legal rights to same-sex couples. In 2000, Vermont becomes the first state to offer same-sex couples civil unions. |
| 2003 | The US Supreme Court rules that Texas’s sodomy law is unconstitutional, which effectively decriminalizes consensual same-sex relations. |
| 2011 | The US military policy “Don’t Ask Don’t Tell” is repealed, allowing gays and lesbians to serve openly. |

Ability

There is resistance to classifying ability as a cultural identity, because we follow a medical model of disability that places disability as an individual and medical rather than social and cultural issue. While much of what distinguishes able-bodied and cognitively able from disabled is rooted in science, biology, and physiology, there are important sociocultural dimensions. The Americans with Disabilities Act (ADA) defines an individual with a disability as “a person who has a physical or mental impairment that substantially limits one or more major life activities, a person who has a history or record of such an impairment, or a person who is perceived by others as having such an impairment” (Allen, 2011). An impairment is defined as “any temporary or permanent loss or abnormality of a body structure or function, whether physiological or psychological” (Allen, 2011). This definition is important because it notes the social aspect of disability in that people’s life activities are limited and the relational aspect of disability in that the perception of a disability by others can lead someone to be classified as such. Ascribing an identity of disabled to a person can be problematic. If there is a mental or physical impairment, it should be diagnosed by a credentialed expert. If there isn’t an

impairment, then the label of *disabled* can have negative impacts, as this label carries social and cultural significance. People are tracked into various educational programs based on their physical and cognitive abilities, and there are many cases of people being mistakenly labeled disabled who were treated differently despite their protest of the ascribed label. Students who did not speak English as a first language, for example, were—and perhaps still are—sometimes put into special education classes.

Ability, just as the other cultural identities discussed, has institutionalized privileges and disadvantages associated with it. Ableism is the system of beliefs and practices that produces a physical and mental standard that is projected as normal for a human being and labels deviations from it abnormal, resulting in unequal treatment and access to resources. Ability privilege refers to the unearned advantages that are provided for people who fit the cognitive and physical norms (Allen, 2011). I once attended a workshop about ability privilege led by a man who was visually impaired. He talked about how, unlike other cultural identities that are typically stable over a lifetime, ability fluctuates for most people. We have all experienced times when we are more or less able.

Perhaps you broke your leg and had to use crutches or a wheelchair for a while. Getting sick for a prolonged period of time also lessens our abilities, but we may fully recover from any of these examples and regain our ability privilege. Whether you’ve experienced a short-term disability or not, the majority of us will become less physically and cognitively able as we get older.

Statistically, people with disabilities make up the largest minority group in the United States, with an estimated 20 percent of people five years or older living with some form of disability (Allen, 2011). Medical advances have allowed some people with disabilities to live longer and more active lives than before, which has led to an increase in the number of people with disabilities. This number could continue to increase, as we have thousands of veterans returning from the wars in Iraq and Afghanistan with physical disabilities or psychological impairments such as posttraumatic stress disorder.

Figure 1.3.3: As recently disabled veterans integrate back into civilian life, they will be offered assistance and accommodations under the Americans with Disabilities Act. [Wounded Warrior Regiment](#) – CC BY-NC 2.0

As disability has been constructed in US history, it has intersected with other cultural identities. For example, people opposed to “political and social equality for women cited their supposed physical, intellectual, and psychological flaws, deficits, and deviations from the male norm.” They framed women as emotional, irrational, and unstable, which was used to put them into the “scientific” category of “feeble-mindedness,” which led them to be institutionalized (Carlson, 2001). Arguments supporting racial inequality and tighter immigration restrictions also drew on notions of disability, framing certain racial groups as prone to mental retardation, mental illness, or uncontrollable emotions and actions. See Table 3.3 “Developments Related to Ability, Identity, and Communication” for a timeline of developments related to ability, identity, and communication. These thoughts led to a dark time in US history, as the eugenics movement sought to limit reproduction of people deemed as deficient.

Table 3.3 *Developments Related to Ability, Identity, and Communication*. Source: Maggie Shreve, “The Movement for Independent Living: A Brief History,” *Independent Living Research Utilization*, accessed October 14, 2011, ilru.org/html/publications/infopaks/IL_paradigm.doc.

| Year(s) | Development |
|---------|---|
| 400 BCE | The Greeks make connections between biology, physiology, and actions. For example, they make a connection between epilepsy and a disorder of the mind but still consider the source to be supernatural or divine. |
| 30–480 | People with disabilities are viewed with pity by early Christians and thought to be so conditioned because of an impurity that could possibly be addressed through prayer. |

| Year(s) | Development |
|-----------|---|
| 500–1500 | As beliefs in the supernatural increase during the Middle Ages, people with disabilities are seen as manifestations of evil and are ridiculed and persecuted. |
| 1650–1789 | During the Enlightenment, the first large-scale movements toward the medical model are made, as science and medicine advance and society turns to a view of human rationality. |
| 1900s | The eugenics movement in the United States begins. Laws are passed to sterilize the “socially inadequate,” and during this time, more than sixty thousand people were forcibly sterilized in thirty-three states. |
| 1930s | People with disabilities become the first targets of experimentation and mass execution by the Nazis. |
| 1970s | The independent living movement becomes a prominent part of the disability rights movement. |
| 1990 | The Americans with Disabilities Act is passed through Congress and signed into law. |

During the early part of the 1900s, the eugenics movement was the epitome of the move to rehabilitate or reject people with disabilities (Allen, 2005). This was a brand of social engineering that was indicative of a strong public support in the rationality of science to cure society’s problems (Allen, 2011). A sterilization law written in 1914 “proposed to authorize sterilization of the socially inadequate,” which included the “feebleminded, insane, criminalistic, epileptic, inebriate, diseased, blind, deaf, deformed, and dependent” (Lombardo, 2011). During the eugenics movement in the United States, more than sixty thousand people in thirty-three states were involuntarily sterilized (Allen, 2011). Although the eugenics movement as it was envisioned and enacted then is unthinkable today, some who have studied the eugenics movement of the early 1900s have issued warnings that a newly packaged version of eugenics could be upon us. As human genome mapping and DNA manipulation become more accessible, advanced genetic testing could enable parents to eliminate undesirable aspects or enhance desirable characteristics of their children before they are born, creating “designer children” (Spice, 2005).

Much has changed for people with disabilities in the United States in the past fifty years. The independent living movement (ILM) was a part of the disability rights movement that took shape along with other social movements of the 1960s and 1970s. The ILM calls for more individual and collective action toward social change by people with disabilities. Some of the goals of the ILM include reframing disability as a social and political rather than just a medical issue, a shift toward changing society rather than just rehabilitating people with disabilities, a view of accommodations as civil rights rather than charity, and more involvement by people with disabilities in the formulation and execution of policies relating to them (Longmore, 2003). As society better adapts to people with disabilities, there will be more instances of interability communication taking place.

Interability communication is communication between people with differing ability levels; for example, a hearing person communicating with someone who is hearing impaired or a person who doesn’t use a wheelchair communicating with someone who uses a wheelchair. Since many people are unsure of how to communicate with a person with disabilities, following are the “Ten Commandments of Etiquette for Communicating with People with Disabilities” to help you in communicating with persons with disabilities:^[1]

1. When talking with a person with a disability, speak directly to that person rather than through a companion or sign-language interpreter.
2. When introduced to a person with a disability, it is appropriate to offer to shake hands. People with limited hand use or an artificial limb can usually shake hands. (Shaking hands with the left hand is an acceptable greeting.)
3. When meeting a person who is visually impaired, always identify yourself and others who may be with you. When conversing in a group, remember to identify the person to whom you are speaking.
4. If you offer assistance, wait until the offer is accepted. Then listen to or ask for instructions.
5. Treat adults as adults. Address people who have disabilities by their first names only when extending the same familiarity to all others. (Never patronize people who use wheelchairs by patting them on the head or shoulder.)
6. Leaning on or hanging on to a person’s wheelchair is similar to leaning or hanging on to a person and is generally considered annoying. The chair is part of the personal body space of the person who uses it.

7. Listen attentively when you're talking with a person who has difficulty speaking. Be patient and wait for the person to finish, rather than correcting or speaking for the person. If necessary, ask short questions that require short answers, a nod, or a shake of the head. Never pretend to understand if you are having difficulty doing so. Instead, repeat what you have understood and allow the person to respond. The response will clue you in and guide your understanding.
8. When speaking with a person who uses a wheelchair or a person who uses crutches, place yourself at eye level in front of the person to facilitate the conversation.
9. To get the attention of a person who is deaf, tap the person on the shoulder or wave your hand. Look directly at the person and speak clearly, slowly, and expressively to determine if the person can read your lips. Not all people who are deaf can read lips. For those who do lip read, be sensitive to their needs by placing yourself so that you face the light source and keep hands, cigarettes, and food away from your mouth when speaking.
10. Relax. Don't be embarrassed if you happen to use accepted, common expressions such as "See you later" or "Did you hear about that?" that seem to relate to a person's disability. Don't be afraid to ask questions when you're unsure of what to do.

Key Takeaways

- The social constructionist view of culture and identity states that the self is formed through our interactions with others and in relation to social, cultural, and political contexts.
- Race, gender, sexuality, and ability are socially constructed cultural identities that developed over time in relation to historical, social, and political contexts.
- Race, gender, sexuality, and ability are cultural identities that affect our communication and our relationships.

Exercises

1. Do you ever have difficulty discussing different cultural identities due to terminology? If so, what are your uncertainties? What did you learn in this chapter that can help you overcome them?
2. What comes to mind when you hear the word *feminist*? How did you come to have the ideas you have about feminism?
3. How do you see sexuality connect to identity in the media? Why do you think the media portrays sexuality and identity the way it does?
4. Think of an instance in which you had an interaction with someone with a disability. Would knowing the "Ten Commandments for Communicating with People with Disabilities" have influenced how you communicated in this instance? Why or why not?

This page titled [1.3: Social Construction of Cultural Identity](#) is shared under a [CC BY](#) license and was authored, remixed, and/or curated by [Tammera Stokes Rice](#).

1.4: Cultural Biases

Learning Objectives

1. Define racial prejudice.
2. Explain the effect privilege and ethnocentrism affects intercultural competence.

We have already discussed race in chapter three. In this chapter we will discuss three other distinct concepts of race, as well as other cultural biases existing in today's world.

“When you begin to understand the biology of human variation, you have to ask yourself if race is a good way to describe that.”—Janis Hutchinson, Biological Anthropologist

Figure 1.4.1: Three Indian woman performing a native dance. By [pavan gupta](#)

Related to race are racial prejudice, racial discrimination, and racism. **Racial prejudice** refers to **the practice of holding false or negative beliefs of one racial group for the purpose of making another racial group (usually one's own) appear superior or normative. Racial discrimination is the outward manifestation of racial prejudice: it is when people act upon their negative beliefs about other races when communicating or setting policy.** Note, it is possible to be prejudiced without acting upon those beliefs and that all races can discriminate against other races. The final concept, racism, combines racial prejudice with social power. Racism is institutional, rather than individual, meaning it **occurs in large institutional contexts such as the representations of particular groups within media or the fact that racial minorities do not have equal access to educational or legal opportunities**(Orbe and Harris 10). Racism often involves the unequal accessibility to resources and power.

Two other concepts that are often confused with race are ethnicity and nationality. **Ethnicity** refers to **a person's or people's heritage and history, and involves shared cultural traditions and beliefs.** A person may identify as Asian-American racially while their ethnicity is Chinese. **Nationality** refers to **a people's nation-state of residence or where they hold citizenship.** Most often nationality is derived from the country where one was born, but on occasion people give up their citizenship by birth and migrate to a new country where they claim national identity. For example, an individual could have been born and raised in another country but once they migrate to the United States and have American citizenship, their nationality becomes American.

Perhaps you may have noticed the theme of inequality as we have discussed topics like “unequal access to resources and benefits,” racial discrimination, and racism. You may have also thought, “oh, my, this is going to be a touchy chapter to read and discuss in class” or “this is interesting and relevant, but I feel uncomfortable talking about this as I don't want to offend anyone.” These are very common and understandable reactions and ones we hear when we teach this subject matter. Hopefully, your instructor has set up a safe, open, and respectful classroom environment to facilitate such discussions. The fact that you are self-reflective of your feelings and how to express them to others is a great start! We too want you to be able to discuss this material both in and out of your class in a productive and self-reflective manner. To facilitate that goal we have included some additional concepts— privilege, ethnocentrism, whiteness, and political correctness—that are useful when considering your own cultural identity, your place in society, and your communication with others.

Privilege

Hopefully, you have been thinking about your own cultural identity as you have been reading this chapter. If so, then you have been thinking about labels that define you culturally. Maybe you have defined yourself as female, Latina, and heterosexual. Or maybe you have labeled yourself as gay, white, working-class, and male. When we give ourselves labels such as these, often we ask ourselves, “Where do I fit in?” This is a good question to ask and demonstrates a recognition of the fact that you belong to more than one culture and that your cultures intersect in various ways. The most significant manifestation of these intersections is power

—the ability to influence others and control our lives. From the statistics given earlier in the chapter and from your own experiences, you should realize that some groups have more power than others. These people are what we refer to as the dominant group: white, male, Christian, middle-class, able-bodied, educated, and heterosexual. People whose cultural identities do not conform to this model are the nondominant groups and have less sociopolitical and economic power.

Peggy McIntosh uses the term **privilege** to refer to *the power of dominant groups*. She defines privilege as an invisible knapsack of advantages that some people carry around. They are invisible because they are often not recognized, seen as normative (i.e., “that’s just the way things are”), seen as universal (i.e., “everyone has them”), or used unconsciously. Below is a list of some of the privileges McIntosh identifies. Can you think of others?

1. I can, if I wish, arrange to be in the company of people of my race most of the time.
2. If I should need to move, I can be pretty sure of renting or purchasing housing in an area that I can afford and in which I would want to live.
3. I can be pretty sure that my neighbors in such a location will be neutral or pleasant to me.
4. I can go shopping alone most of the time, pretty well assured that I will not be followed or harassed.
5. I can turn on the television or open to the front page of the paper and see people of my race widely represented.
6. When I am told about our national heritage or about “civilization,” I am shown that people of my color made it what it is.
7. I can be sure that my children will be given curricular materials that testify to the existence of their race.
8. If I want to, I can be pretty sure of finding a publisher for this piece on white privilege.
9. I can go into a music shop and count on finding the music of my race represented, into a supermarket and find the staple foods that fit with my cultural traditions, into a hairdresser’s shop and find someone who can deal with my hair.
10. Whether I use checks, credit cards, or cash, I can count on my skin color not to work against the appearance of financial reliability.
11. I can arrange to protect my children most of the time from people who might not like them.
12. I can swear, or dress in second-hand clothes, or not answer letters without having people attribute these choices to the bad morals, the poverty, or the illiteracy of my race.
13. I can speak in public to a powerful male group without putting my race on trial.
14. I can do well in a challenging situation without being called a credit to my race.
15. I am never asked to speak for all the people of my racial group.
16. I can remain oblivious of the language and customs of persons of color, who constitute the world’s majority, without feeling in my culture any penalty for such oblivion.
17. I can criticize our government and talk about how much I fear its policies and behavior without being seen as a cultural outsider.
18. I can be pretty sure that if I ask to talk to “the person in charge” I will be facing a person of my race.
19. If a traffic cop pulls me over, or if the IRS audits my tax return, I can be sure I haven’t been singled out because of my race.
20. I can easily buy posters, postcards, picture books, greeting cards, dolls, toys, and children’s magazines featuring people of my race.
21. I can go home from most meetings of organizations I belong to feeling somewhat tied in rather than isolated, out of place, outnumbered, unheard, held at a distance, or feared.
22. I can take a job with an affirmative action employer without having coworkers on the job suspect that I got it because of race.
23. I can choose public accommodation without fearing that people of my race cannot get in or will be mistreated in the places I have chosen.
24. I can be sure that if I need legal or medical help my race will not work against me.
25. If my day, week, or year is going badly, I need not ask of each negative episode or situation whether it has racial overtones.
26. I can choose blemish cover or bandages in “flesh” color that more or less match my skin.

McIntosh admits, “My perception is that colleges and universities are the main institutions that are raising awareness of the relationship between privilege and oppression, but that this awareness is needed throughout all public and private sectors of the United States; the ability to see privilege should be in the minds of all citizens” (195). As you think about privilege and the resulting advantages that some groups have over others, you should also keep in mind two facts. One, privilege is a relative concept that varies according to context. In some situations we may be more privileged than others, and in order to access some of that privilege one may decide to highlight or conceal parts of their identity. For example, unless a person tells you, you have no way of knowing their sexual orientation. Thus, a gay man might decide to “pass” as straight at a family reunion to avoid conflict from a heterosexist family. The fact that he can choose pass as an Asian man and cannot make the choice to pass as Latino is another example of privilege. Two, we may have aspects of our identities that are simultaneously advantaged and disadvantaged. The gay,

white, working-class, male above is advantaged by the fact that he has light skin and is male, and is disadvantaged by the fact that he is gay and working-class.

Think About It . . . Privilege

Another example is from Nathan Pyle, a BuzzFeed staff member who wrote an article entitled, [10 Privileges I Have Complained About](#).

Read Nathan's article and watch this [short video](#) on teaching privilege in the classroom. Do you have certain privileges? Are there some you lack?

Ethnocentrism

One of the first steps to communicating sensitively and productively about cultural identity is to be able to name and recognize one's identity and the relative privilege that it affords. Similarly important, is a recognition that one's cultural standpoint is not everyone's standpoint. Our views of the world, what we consider right and wrong, normal or weird, are largely influenced by our cultural position or standpoint: the intersections of all aspects of our identity. One common mistake that people from all cultures are guilty of is **ethnocentrism**—**placing one's own culture and the corresponding beliefs, values, and behaviors in the center; in a position where it is seen as normal and right, and evaluating all other cultural systems against it.**

Ethnocentrism shows up in small and large ways: the WWII Nazi's elevation of the Aryan race and the corresponding killing of Jews, Gypsies, gays and lesbians, and other non Aryan groups is one of the most horrific ethnocentric acts in history. However, ethnocentrism shows up in small and seemingly unconscious ways as well. In American culture, if you decided to serve dog meat as appetizers at your cocktail party you would probably disgust your guests and the police might even arrest you because the consumption of dog meat is not culturally acceptable. However, in China "it is neither rare nor unusual" to consume dog meat (Wingfield-Hayes). In the Czech Republic, the traditional Christmas dinner is carp and potato salad. Imagine how your family might react if you told them you were serving carp and potato salad for Christmas. In the Czech Republic, it is a beautiful tradition, but in America, it might not receive a warm welcome. Our cultural background influences every aspect of our lives from the food we consume to the classroom. Ethnocentrism is likely to show up in Literature classes as well. Cultural bias dictates which "great works" students are going to read and study in the classroom. More often than not, these works represent the given culture (i.e., reading French authors in France and Korean authors in Korea). This ethnocentric bias has received some challenge in United States' schools as teachers make efforts to create a multicultural classroom by incorporating books, short stories, and traditions from non-dominant groups.

In the field of geography there has been an ongoing debate about the use of a Mercator map versus a Peter's Projection map. The arguments reveal cultural biases toward the Northern, industrialized nations.

Whiteness

If you are White, how would you describe your culture? When we ask this question to our students we find that White students are often uncomfortable with the question, feel guilty about self-identifying as White, or claim that White people do not have a culture. Gordon Alley-Young says, "The invisibility of whiteness and white privilege for many people is what makes it difficult to name and thus to disrupt" (312). These sentiments have led an increasing amount of scholars in a variety of disciplines such as Sociology, Women's Studies, Anthropology, English, as well as Communication to study the concept of Whiteness. Orbe and Harris explain why exploring this concept is important by explaining that "[i]t helps us all view communication as a racialized process [which] sharpens our awareness of how racial categorization is used to reinforce old hierarchies in which some races are more superior than others [and that] whiteness studies also assign each person a role in race relations" (89).

View communication as a racialized process—meaning that our communication is structured by larger societal and racial dynamics. Second, understanding Whiteness sharpens our awareness of how racial categorization is used to reinforce old hierarchies in which some races are more superior than others. This helps us recognize how Whiteness can be used to signify

dominance, privilege, and advantage in the United States. And, third, through studying and recognizing the effects of Whiteness, each person plays a role in race relations. White people can no longer sit on the sidelines and claim “it’s a black problem” when discussing interracial conflict. (82-83)

Overall, it removes the White race from the often-unidentified “normative” group and provides a context for studying, talking about, and hopefully improving race relations.

The above discussion about privilege and Whiteness is not meant to suggest that those people with sociopolitical privilege should feel ashamed or guilty. This is often a trap that people fall into and it can shut down important thinking and conversations about intercultural communication. We want everyone to realize that they have a racial identity and thus are an important part of improving race relations. Race relations is not just a subject that concerns minorities—it concerns everyone as we all play a part and benefit whether consciously or unconsciously.

Political Correctness

Another claim or label that may be used to discount such difficult discussions is Political Correctness, or “PC” as it has been dubbed in the popular press. Opponents of multiculturalism and diversity studies try and dismiss such topics as “that’s just PC.” Luckily, some of the heated debate about PC have quieted in recent years but the history lingers. In short, political correctness refers to “the elimination of speech that often works to exclude, oppress, demean, or harass certain groups” (Orbe and Harris 58, Remar). The debate largely focused around competing interpretations of the First Amendment right to free speech and the Fourteenth Amendment’s right to equal access to education. No matter what your position on this issue, we want to simply recognize two facts. One, that much of the PC debate and fury was largely misrepresented and hyped in the mainstream media by the use of extreme examples and a slippery-slope argument. Rush Limbaugh, for example, became famous for claiming that an awareness and sensitivity of language choice would lead to the “thought Police” or “PC police.” Two, that words and labels have great power to create perceptions, realities and identities. Toward that aim, we will discuss the power of language in greater detail in the following section.

Summary

Culture: belief systems, values, and behaviors that support a particular ideology or social arrangement.

Culture guides language use, appropriate forms of dress, and views of the world.

The concept is broad and encompasses many areas of our lives such as the role of the family, individual, educational systems, employment, and gender.

Racial prejudice refers to the practice of holding false or negative beliefs of one racial group for the purpose of making another racial group (usually one’s own) appear superior or normative.

Racial discrimination is the outward manifestation of racial prejudice: it is when people act upon their negative beliefs about other races when communicating or setting policy.

Racism, combines racial prejudice with social power. It is institutional, rather than individual, meaning it occurs in large institutional contexts such as the representations of particular groups within media or the fact that racial minorities do not have equal access to educational or legal opportunities. It often involves the unequal accessibility to resources and power.

Understanding Race

Race fall into two camps: a biological versus a sociopolitical construction:

| Biological | Sociopolitical |
|---|---|
| “pure” races existed and could be distinguished by such physical features as eye color and shape, skin color, and hair. | it is not a person’s DNA that places them into a particular racial grouping, but all of the other factors that create social relations—politics, geography, or migration. |
| traced back to genetic differences | what it means to be of a particular race |
| no scientific connection with racial identity and cultural traits or behaviors | meanings of race have changed across time and space. |

- **Ethnicity** refers to a person’s or people’s heritage and history, and involves shared cultural traditions and beliefs.
- **Nationality** refers to a person’s nation-state of residence or where he/she holds citizenship.
- **Gender** is part of culture in that every society has particular gender roles and expectations for males and females.
- **Sexual orientation** refers to a person’s preference for sexual or romantic relationships; one may prefer a partner of the same sex, the opposite sex, or both.
- **Power** is the ability to influence others and control our lives.
- The **dominant group** in the US is white, male, Christian, middle-class, able-bodied, educated, and heterosexual. Those who fall into this category are deemed privilege based on their power
- **Nondominant groups** are people who do not conform or fit into the dominant group and have less sociopolitical and economic power.
- **Ethnocentrism**—placing one’s own culture and the corresponding beliefs, values, and behaviors in the center; in a position where it is seen as normal and right, and evaluating all other cultural systems against it.

| <i>Minority Identity Development</i> | <i>Majority Identity Development</i> | <i>Bi- or Multiracial Identity Development</i> |
|--------------------------------------|--------------------------------------|--|
| Stage 1: Unexamined Identity. | Stage 1: Unexamined Identity | Stage 1: Personal Identity |
| Stage 2: Conformity | Stage 2: Acceptance. | Stage 2: Group Categorization |
| Stage 3: Resistance and Separation. | Stage 3: Resistance | Stage 3: Enmeshment/Denial |
| Stage 4: Integration | Stage 4: Redefinition | Stage 4: Appreciation |
| | Stage 5: Integration | Stage 5: Integration. |

- **High Context:** the meaning of the communication is in the people, or more specifically, the relationship between the people as opposed to just the words.
- **Low Context:** When we have to rely on the translation of the words to decipher a person’s meaning
- **Collectivist:** When a person or culture places the needs and interests of the group above individual desires or motivations.
- **Individualistic:** The self or one’s own personal goals motivate these cultures. Each person is viewed as responsible for his or her own success or failure in life.

1.5: Taxonomies of Cultural Patterns

Learning Objectives

1. Explain the similarities and differences of Hall, Hofstede and the GLOBE Taxonomies.

To develop confidence in intercultural communication, you must understand differences in cultural patterns. Cultural patterns are the similar behaviors within similar situations we witness due to shared beliefs, values, norms and social practices that are steady over time. In this chapter, you will explore three different taxonomies, which help us understand similarities and differences in these cultural patterns. Specifically, we will examine Edward Hall's High-Low context cultural taxonomy, Geert Hofstede's six dimensions, and Shalom Schwartz's seven dimensions of culture. (Stokes Rice, 2019).[i]

Hall's High-Low Context Cultural Taxonomy

Anthropologist Edward Hall founded the field of intercultural communication in 1959 with his book *The Silent Language*. The book was originally intended for the general public, but it sparked academic research in intercultural communication and fueled interest in subjects like nonverbal communication, according to [Keio Communication Review](#).^[ii]

High and Low Context^[iii]

Think about someone you are very close to—a best friend, romantic partner, or sibling. Have there been times when you began a sentence and the other person knew exactly what you were going to say before you said it? For example, in a situation between two sisters, one sister might exclaim, “Get off!” (which is short for “get off my wavelength”). This phenomenon of being on someone's wavelength is similar to what Hall describes as high context. In high context communication the meaning is in the people, or more specifically, the relationship between the people as opposed to just the words. When we have to rely on the translation of the words to decipher a person's meaning then this is said to be low context communication. The American legal system, for example, relies on low context communication.

While some cultures are low or high context, in general terms, there can also be individual or contextual differences within cultures. In the example above between the two sisters, they are using high context communication, however, America is considered a low context culture. Countries such as Germany and Sweden are also low context while Japan and China are high context.

Hall defines intercultural communication as a form of communication that shares information across different cultures and social groups. One framework for approaching intercultural communication is with high-context and low-context cultures, which refer to the value cultures place on indirect and direct communication.

Figure 1.5.1: Low – High Context Cultures

High-Context Cultures

A high-context culture relies on implicit communication and nonverbal cues. In high-context communication, a message cannot be understood without a great deal of background information. Asian, African, Arab, central European and Latin American cultures

are generally considered to be high-context cultures.

High-context cultures often display the following tendencies, according to C.B. Halverson's book *Cultural Context Inventory*.

- **Association:** Relationships build slowly and depend on trust. Productivity depends on relationships and the group process. An individual's identity is rooted in groups (family, culture, work). Social structure and authority are centralized.
- **Interaction:** Nonverbal elements such as voice tone, gestures, facial expression and eye movement are significant. Verbal messages are indirect, and communication is seen as an art form or way of engaging someone. Disagreement is personalized, and a person is sensitive to conflict expressed in someone else's nonverbal communication.
- **Territoriality:** Space is communal. People stand close to each other and share the same space.
- **Temporality:** Everything has its own time, and time is not easily scheduled. Change is slow, and time is a process that belongs to others and nature.
- **Learning:** Multiple sources of information are used. Thinking proceeds from general to specific. Learning occurs by observing others as they model or demonstrate and then practicing. Groups are preferred, and accuracy is valued.

Low-Context Cultures

A low-context culture relies on explicit communication. In low-context communication, more of the information in a message is spelled out and defined. Cultures with western European roots, such as the United States and Australia, are generally considered to be low-context cultures.

Low-context cultures often display the following tendencies, according to Halverson:

- **Association:** Relationships begin and end quickly. Productivity depends on procedures and paying attention to the goal. The identity of individuals is rooted in themselves and their accomplishments. Social structure is decentralized.
- **Interaction:** Nonverbal elements are not significant. Verbal messages are explicit, and communication is seen as a way of exchanging information, ideas and opinions. Disagreement is depersonalized; the focus is on rational (not personal) solutions. An individual can be explicit about another person's bothersome behavior.
- **Territoriality:** Space is compartmentalized. Privacy is important, so people stand farther apart.
- **Temporality:** Events and tasks are scheduled and to be done at particular times. Change is fast, and time is a commodity to be spent or saved. One's time is one's own.
- **Learning:** One source of information is used. Thinking proceeds from specific to general. Learning occurs by following the explicit directions and explanations of others. Individual orientation is preferred, and speed is valued.

Communication Dynamics in High- and Low-Context Cultures

Cultural differences shape every aspect of global communication, says *Forbes* contributor Carol Kinsey Goman. This helps explain why people in Japan (a high-context culture) prefer face-to-face communication over electronic technology favored by other industrialized countries like the United States, Canada, the United Kingdom and Germany (low-context cultures).

High-context cultures also prefer personal bonds and informal agreements over meticulously worded legal documents. They “are looking for meaning and understanding in what is *not* said — in body language, in silences and pauses, and in relationships and empathy,” Goman says. Meanwhile, low-context cultures “place emphasis on sending and receiving accurate messages directly, and by being precise with spoken or written words,” she explains. U.S. business leaders often fall into a communication trap by disregarding the importance of building and maintaining personal relationships when interacting with people from high-context cultures.

People should also watch for differences within high- and low-context cultures. This classification is an oversimplification, according to A.C. Krizan and others in the book *Business Communication*. “For example, although American culture is classified as low context, communication among family members tends to be high context,” they write. “Family relationships and members' high level of shared experiences require fewer words because of mutual understandings.”

On the other hand, communication between two businesspersons from a low-context culture tends to be more specific and direct. Attention focuses more on what is said than relationships. In China or Japan, words receive less attention than relationships, mutual understandings and nonverbal body language.

Hofstede's Taxonomy^[iv]

The theory of Hofstede's cultural dimensions constitutes a framework revolving around cross-cultural communication, which was devised by Geert Hofstede. The dimensions collectively portray the impact of the culture ingrained in society on the values of the

members of that society. They also describe the relationship between these values and behavior, with the help of a structure based on factor analysis. In other words, this theory studies significant aspects of culture and provides them a rating on a comparison scale.

So far as international business is concerned, the dimensions of culture form an important facet. Knowledge of the manner in which different features of a business are viewed in different cultures, can help a manager in understanding and sailing successfully across the international business market.

Figure 1.5.2: Hofstede cultural dimensions

In this article, we discuss the topic of Hofstede cultural dimensions by exploring 1) an **introduction**; 2) the **six cultural dimensions of Hofstede framework**, and using those dimensions to better understand cultures and people based on 3) a **case study of cultural differences**; 4) the **urgency of managing cultural difference as part of human resources management**; and 5) **conclusion**.

Hofstede's Cultural Dimensions

The original model of Hofstede was the outcome of factor analysis done on a global survey of the value system of employees at IBM between the years 1967 and 1973. This theory was one of the initial ones which could quantify cultural differences.

The original theory that Hofstede proposed talked of four dimensions, namely power distance, uncertainty avoidance, individualism vs. collectivism and masculinity vs. femininity. After conducting independent studies in Hong Kong, Hofstede included a fifth dimension, known as long-term vs. short-term orientation, to describe value aspects that were not a part of his original theory. Again in 2010, Hofstede devised another dimension, the sixth one, indulgence vs. self-restraint, in an edition of '*Cultures and Organizations: Software of the Mind*', co-authored by Michael Minkov.

Hofstede's work serves as the base for other researches in cross-cultural psychology, inviting a number of researchers to study different aspects of international business and communication. These dimensions founded by Hofstede illustrate the deeply embedded values of diverse cultures. These values impact not only how people with different cultural backgrounds behave, but also the manner in which they will potentially behave when placed in a work-associated context.

This is a brief overview of the six cultural dimensions:

- 1. Power Distance:** This dimension explains the extent to which members who are less powerful in a society accept and also expect that the distribution of power takes place unequally.
- 2. Uncertainty Avoidance:** It is a dimension that describes the extent to which people in society are not at ease with ambiguity and uncertainty.
- 3. Individualism vs. Collectivism:** The focus of this dimension is on the question regarding whether people have a preference for being left alone to look after themselves or want to remain in a closely knitted network.
- 4. Masculinity vs. Femininity:** Masculinity implies a society's preference for assertiveness, heroism, achievement and material reward for attaining success. On the contrary, femininity represents a preference for modesty, cooperation, quality of life and caring for the weak.
- 5. Long-Term vs. Short-Term Orientation:** Long-term orientation describes the inclination of a society toward searching for virtue. Short-term orientation pertains to those societies that are strongly inclined toward the establishment of the absolute truth.
- 6. Indulgence vs. Restraint:** This revolves around the degree to which societies can exercise control over their impulses and desires.

Hofstede's Dimensions and Understanding Countries, Culture and People

According to Geert Hofstede, culture is the mind's collective programming that differentiates between one category of people and members of one group from another. The term 'category' might imply nations, religions, ethnicities, regions across or within nations, genders, organizations, or occupations.

#1: Power Distance

Power distance stands for inequality that is defined not from above, but from below. It is, in fact, the extent to which organizations and societies accept power differentials.

Societies with large power distance are characterized by the following features:

- Autocracy in leadership;
- Authority that is centralized;
- Paternalistic ways of management;
- A number of hierarchy levels;
- The acceptance of the privileges that come with power;
- A lot of supervisory staff;
- An expectation of power differences and inequality.
- Societies that have small power distance possess the following features:
- Participative or consultative style of management;
- Decision-making responsibility and authority decentralized;
- Flat structure of organizations;
- Supervisory staff small in proportion;
- Questioning the authority and lack of acceptance;
- An inclination toward egalitarianism;
- Consciousness of rights.

#2: Uncertainty Avoidance

Uncertainty avoidance is the extent to which the members belonging to a society are capable of coping with future uncertainty without going through stress.

Weak uncertainty avoidance comes with the following features:

- Undertaking risk;
- Flexibility;
- Tolerance toward differing opinions and behaviors.

Strong uncertainty avoidance is represented by the following aspects:

- Tendency to avoid risk;
- Organizations that have a number of standardized procedures, written rules, and clearly delineated structures;
- Strong requirement for consensus;
- Respect for authority;
- Requirement for predictability highlighting the significance of planning;
- Minimal or no tolerance for deviants;
- Promotions depending upon age or seniority.

#3: Individualism vs. Collectivism

Individualism set against its opposite collectivism defines the extent to which individuals are inclined toward remaining in groups.

Individualistic cultures are characterized by:

- Fostering contractual relationships that revolve around the fundamentals of exchange. These cultures engage in the calculation of profit and loss prior to engagement in a behavior.
- Concentration on self or at the most very near and dear ones, and concern with behavioral relationships as well as own goals, interests, and needs.
- Emphasis on personal enjoyment, fun, and pleasure, over duties and social norms. They are a part of a number of in-groups which hardly have any influence on their lives.

- Self-sufficiency and value independence, and placement of self-interest over collective interest. Confrontation is accepted as an attribute.
- Stress on horizontal relationships (such as the relationship between spouse and spouse) rather than vertical relationships (such as the relationship between parent and child).
- The notion that they hold unique beliefs.

Collectivistic cultures are characterized by:

- Behavior as per social norms that are established for maintenance of social harmony among in-group members;
- Considering the wider collective with regards to implications of their actions;
- Sharing of resources and readiness to give up personal interest keeping in mind the collective interest;
- Favoring some in-groups (such as friends and family);
- Being a part of a few in-groups that have an influence on their lives. Rather than being individualistic, they have an increased inclination towards conformity;
- Increased concern regarding in-group members. They show hostility or indifference toward out-group members;
- Emphasis on harmony and hierarchy within group;
- Regulation of behavior with the help of group norms.

#4: Masculinity vs. Femininity

Masculinity and femininity revolve around the emotional role distribution between genders, which is again a prime issue in a number of societies.

Masculine cultures possess the following characteristics:

- Clearly distinct gender roles;
- Benevolence has little or no significance;

Men are expected to be tough and assertive with a concentration on material achievements;

- Much value is associated with mastery of people, nature, job, and the like;
- Sense of humor, intelligence, affection, personality are considered preferred characteristic traits of a boyfriend by the women;
- Understanding, wealth, and health are considered desirable characteristic traits of a husband by the women.

Feminine cultures possess the following characteristics:

- Overlapping of social gender roles;
- Men, as well as women, are expected to be tender, modest, with focus on the quality of life;
- Emphasis on the non-materialistic angles of success;
- The preferred traits in boyfriends and husbands are the same.

#5: Long-Term vs. Short-Term Orientation

This is based on the Confucian dynamism. According to the teachings of Confucius, the following aspects of life are evident:

- Unequal relationships existing between people ensure the stability of society.
- Every social organization has its prototype in the family.
- Virtuous behavior involves treatment meted out to others in a similar manner as one prefers to be treated oneself.
- So far as tasks in life are concerned, virtue comprises acquiring skills, working hard, education, being wise in spending as well as showing perseverance and patience.

Long-term orientation (high Confucian values) reflects the following:

- A futuristic, dynamic mentality;
- Emphasis on a relationship order depending on status, and observance of this order;
- Emphasis on persistence and perseverance;
- Stress on possessing a sense of shame;
- Stress on thrift;
- Positive association with economic growth;
- Inclination toward interrelatedness represented in sensitivity toward social contacts.

Short-term orientation (low Confucian values) is characterized by the following:

- Orientation toward past and present;

- Focus on respect for tradition;
- A comparatively static, more conventional mentality;
- Emphasis on saving face;
- Emphasis on personal steadiness;
- Focus on stability;
- Emphasis on reciprocation of gifts, favors, and greetings;
- Negative association with economic growth.

#6: Indulgence vs. Restraint

The dimension of indulgence vs. restraint focuses on happiness. A society that practices indulgence makes room for the comparatively free gratification of natural and basic human drives pertaining to indulging in fun and enjoying life. The quality of restraint describes a society that holds back need gratification and tries to control it through stringent social norms.

Think About It . . . Country Comparison

From years of research, Geert Hofstede organized 52 countries in terms of their orientation. Visit [this website](#) and at the bottom of the page go to the country comparison tool and begin exploring Hofstede's dimensions from different cultures.

When looking at Hofstede's research and that of others on individualism and collectivism, it is important to remember is that no culture is purely one or the other. Again, think of these qualities as points along a continuum rather than fixed positions. Individuals and co-cultures may exhibit differences in individualism/collectivism from the dominant culture and certain contexts may highlight one or the other. Also remember that it can be very difficult to change one's orientation and interaction with those with different value orientations can prove challenging. In some of your classes, for example, does the Professor require a group project as part of the final grade? How do students respond to such an assignment? In our experience we find that some students enjoy and benefit from the collective and collaborative process and seem to learn better in such an environment. These students have more of a collective orientation. Other students, usually the majority, are resistant to such assignments citing reasons such as "it's difficult to coordinate schedules with four other people" or "I don't want my grade resting on someone else's performance." These statements reflect an individual orientation.[v]

GLOBE Taxonomy

GLOBE stands from Global Leadership and Organization Behavior Effectiveness. It is a means of compiling information on what are the dominant patterns of a culture. The measures that are defined by Hofstede include: power distance, uncertainty avoidance, in-group collectivism, institutional collectivism, gender egalitarianism, assertiveness, performance orientation, future orientation, and humane orientation. If a culture's numbers are above zero on the GLOBE scale, then they have high dimensions. If they are low on the GLOBE scale, they will be prone to have low dimensions.[vi]

- Power Distance: The degree to which people believe that power should be stratified, unequally shared, and concentrated at higher levels of an organization or government
- Uncertainty Avoidance: The extent to which people strive to avoid uncertainty by relying on social norms, rules, rituals, and bureaucratic practices to alleviate the unpredictability
- In-Group Collectivism: The degree to which people express pride, loyalty, and cohesiveness in their families
- Institutional Collectivism: The degree to which a culture's institutional practices encourage collective actions and the collective distribution of resources
- Gender Egalitarianism: The extent to which people minimize gender role differences and gender discrimination while promoting gender equality
- Assertiveness: The degree to which people are assertive, confrontational, and aggressive in social relationships

- Performance Orientation: The extent to which people encourage others to improve their task-oriented performance and excel.
- Future Orientation: The degree to which people engage in future orientated behaviors such as planning, investing in the future, and delaying gratification
- Humane Orientation: The degree to which people encourage others to be fair, altruistic, friendly, generous, caring, and kind

The "Global Leadership and Organizational Behavior Effectiveness" (GLOBE) Research Program was conceived in 1991 by Robert J. House of the Wharton School of Business, University of Pennsylvania. In 2004, its first comprehensive volume on "Culture, Leadership, and Organizations: The GLOBE Study of 62 Societies" was published, based on results from about 17,300 middle managers from 951 organizations in the food processing, financial services, and telecommunications services industries. A second major volume, "Culture and Leadership across the World: The GLOBE Book of In-Depth Studies of 25 Societies" became available in early 2007. It complements the findings from the first volume with in-country leadership literature analyses, interview data, focus group discussions, and formal analyses of printed media to provide in-depth descriptions of leadership theory and leader behavior in those 25 cultures. Cultural Dimensions and Culture Clusters: GLOBE's major premise (and finding) is that leader effectiveness is contextual, that is, it is embedded in the societal and organizational norms, values, and beliefs of the people being led. In other words, to be seen as effective, the time-tested adage continues to apply: "When in Rome do as the Romans do." As a first step to gauge leader effectiveness across cultures, GLOBE empirically established nine cultural dimensions that make it possible to capture the similarities and/or differences in norms, values, beliefs—and practices—among societies. They build on findings by Hofstede (1980), Schwartz (1994), Smith (1995), Inglehart (1997), and others. They are: Power Distance: The degree to which members of a collective expect power to be distributed equally. Uncertainty Avoidance: The extent to which a society, organization, or group relies on social norms, rules, and procedures to alleviate unpredictability of future events. Humane Orientation: The degree to which a collective encourages and rewards individuals for being fair, altruistic, generous, caring, and kind to others. Collectivism I: (Institutional) The degree to which organizational and societal institutional practices encourage and reward collective distribution of resources and collective action. Collectivism II: (In-Group) The degree to which individuals express pride, loyalty, and cohesiveness in their organizations or families. Assertiveness: The degree to which individuals are assertive, confrontational, and aggressive in their relationships with others. Gender Egalitarianism: The degree to which a collective minimizes gender inequality. Future Orientation: The extent to which individuals engage in future-oriented behaviors such as delaying gratification, planning, and investing in the future. Performance Orientation: The degree to which a collective encourages and rewards group members for performance improvement and excellence.[vii]

1.6: Understanding Intercultural Communication

Learning Objectives

- Define intercultural communication.
- List and summarize the six dialectics of intercultural communication.
- Discuss how intercultural communication affects interpersonal relationships.

It is through intercultural communication that we come to create, understand, and transform culture and identity. Intercultural communication is communication between people with differing cultural identities. One reason we should study intercultural communication is to foster greater self-awareness (Martin & Nakayama, 2010). Our thought process regarding culture is often “other focused,” meaning that the culture of the other person or group is what stands out in our perception. However, the old adage “know thyself” is appropriate, as we become more aware of our own culture by better understanding other cultures and perspectives. Intercultural communication can allow us to step outside of our comfortable, usual frame of reference and see our culture through a different lens. Additionally, as we become more self-aware, we may also become more ethical communicators as we challenge our ethnocentrism, or our tendency to view our own culture as superior to other cultures.

As was noted earlier, difference matters, and studying intercultural communication can help us better negotiate our changing world. Changing economies and technologies intersect with culture in meaningful ways (Martin & Nakayama). Technology has created for some a global village where vast distances are now much shorter due to new technology that make travel and communication more accessible and convenient (McLuhan, 1967). However, as the following “Getting Plugged In” box indicates, there is also a digital divide, which refers to the unequal access to technology and related skills that exists in much of the world. People in most fields will be more successful if they are prepared to work in a globalized world. Obviously, the global market sets up the need to have intercultural competence for employees who travel between locations of a multinational corporation. Perhaps less obvious may be the need for teachers to work with students who do not speak English as their first language and for police officers, lawyers, managers, and medical personnel to be able to work with people who have various cultural identities.

?

Think About It . . . “Getting Plugged In” - The Digital Divide

Many people who are now college age struggle to imagine a time without cell phones and the Internet. As “digital natives” it is probably also surprising to realize the number of people who do not have access to certain technologies. The *digital divide* was a term that initially referred to gaps in access to computers. The term expanded to include access to the Internet since it exploded onto the technology scene and is now connected to virtually all computing (van Deursen & van Dijk, 2010). Approximately two billion people around the world now access the Internet regularly, and those who don't face several disadvantages (Smith, 2011). Discussions of the digital divide are now turning more specifically to high-speed Internet access, and the discussion is moving beyond the physical access divide to include the skills divide, the economic opportunity divide, and the democratic divide. This divide doesn't just exist in developing countries; it has become an increasing concern in the United States. This is relevant to cultural identities because there are already inequalities in terms of access to technology based on age, race, and class (Sylvester & McGlynn, 2010). Scholars argue that these continued gaps will only serve to exacerbate existing cultural and social inequalities. From an international perspective, the United States is falling behind other countries in terms of access to high-speed Internet. South Korea, Japan, Sweden, and Germany now all have faster average connection speeds than the United States (Smith, 2011). And Finland in 2010 became the first country in the world to declare that all its citizens have a legal right to broadband Internet access (ben-Aaron, 2010). People in rural areas in the United States are especially disconnected from broadband service, with about 11 million rural Americans unable to get the service at home. As so much of our daily lives go online, it puts those who aren't connected at a disadvantage. From paying bills online, to interacting with government services, to applying for jobs, to taking online college classes, to researching and participating in political and social causes, the Internet connects to education, money, and politics.

1. What do you think of Finland's inclusion of broadband access as a legal right? Is this something that should be done in other countries? Why or why not?
2. How does the digital divide affect the notion of the global village?
3. How might limited access to technology negatively affect various nondominant groups?

Intercultural Communication: A Dialectical Approach

Intercultural communication is complicated, messy, and at times contradictory. Therefore it is not always easy to conceptualize or study. Taking a dialectical approach allows us to capture the dynamism of intercultural communication. A dialectic is a relationship

between two opposing concepts that constantly push and pull one another (Martin & Nakayama, 2010). To put it another way, thinking dialectically helps us realize that our experiences often occur in between two different phenomena. This perspective is especially useful for interpersonal and intercultural communication, because when we think dialectically, we think relationally. This means we look at the relationship between aspects of intercultural communication rather than viewing them in isolation. Intercultural communication occurs as a dynamic in-betweenness that, while connected to the individuals in an encounter, goes beyond the individuals, creating something unique. Holding a dialectical perspective may be challenging for some Westerners, as it asks us to hold two contradictory ideas simultaneously, which goes against much of what we are taught in our formal education. Thinking dialectically helps us see the complexity in culture and identity because it doesn't allow for dichotomies. Dichotomies are dualistic ways of thinking that highlight opposites, reducing the ability to see gradations that exist in between concepts. Dichotomies such as good/evil, wrong/right, objective/subjective, male/female, in-group/out-group, black/white, and so on form the basis of much of our thoughts on ethics, culture, and general philosophy, but this isn't the only way of thinking (Marin & Nakayama, 1999). Many Eastern cultures acknowledge that the world isn't dualistic. Rather, they accept as part of their reality that things that seem opposite are actually interdependent and complement each other. I argue that a dialectical approach is useful in studying intercultural communication because it gets us out of our comfortable and familiar ways of thinking. Since so much of understanding culture and identity is understanding ourselves, having an unfamiliar lens through which to view culture can offer us insights that our familiar lenses will not. Specifically, we can better understand intercultural communication by examining six dialectics (see Figure 6.1 "Dialectics of Intercultural Communication") (Martin & Nakayama, 1999).

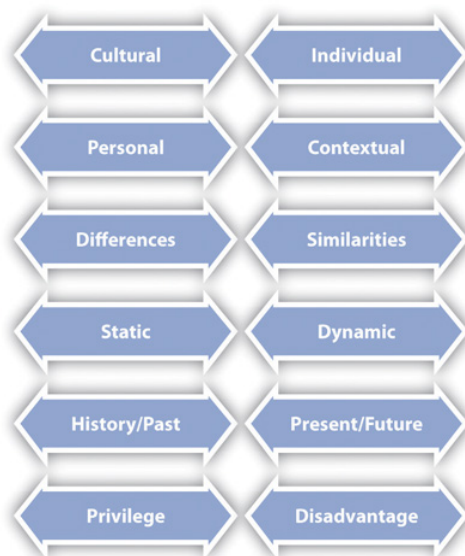

Figure 6.1: Dialectics of Intercultural Communication. Source: Adapted from Judith N. Martin and Thomas K. Nakayama, "Thinking Dialectically about Culture and Communication," *Communication Theory* 9, no. 1 (1999): 1–25.

The cultural-individual dialectic captures the interplay between patterned behaviors learned from a cultural group and individual behaviors that may be variations on or counter to those of the larger culture. This dialectic is useful because it helps us account for exceptions to cultural norms. For example, earlier we learned that the United States is said to be a low-context culture, which means that we value verbal communication as our primary, meaning-rich form of communication. Conversely, Japan is said to be a high-context culture, which means they often look for nonverbal clues like tone, silence, or what is not said for meaning. However, you can find people in the United States who intentionally put much meaning into *how* they say things, perhaps because they are not as comfortable speaking directly what's on their mind. We often do this in situations where we may hurt someone's feelings or damage a relationship. Does that mean we come from a high-context culture? Does the Japanese man who speaks more than is socially acceptable come from a low-context culture? The answer to both questions is no. Neither the behaviors of a small percentage of individuals nor occasional situational choices constitute a cultural pattern.

The personal-contextual dialectic highlights the connection between our personal patterns of and preferences for communicating and how various contexts influence the personal. In some cases, our communication patterns and preferences will stay the same across many contexts. In other cases, a context shift may lead us to alter our communication and adapt. For example, an American businesswoman may prefer to communicate with her employees in an informal and laid-back manner. When she is promoted to manage a department in her company's office in Malaysia, she may again prefer to communicate with her new Malaysian

employees the same way she did with those in the United States. In the United States, we know that there are some accepted norms that communication in work contexts is more formal than in personal contexts. However, we also know that individual managers often adapt these expectations to suit their own personal tastes. This type of managerial discretion would likely not go over as well in Malaysia where there is a greater emphasis put on power distance (Hofstede, 1991). So while the American manager may not know to adapt to the new context unless she has a high degree of intercultural communication competence, Malaysian managers would realize that this is an instance where the context likely influences communication more than personal preferences.

The differences-similarities dialectic allows us to examine how we are simultaneously similar to and different from others. As was noted earlier, it's easy to fall into a view of intercultural communication as "other oriented" and set up dichotomies between "us" and "them." When we overfocus on differences, we can end up polarizing groups that actually have things in common. When we overfocus on similarities, we essentialize, or reduce/overlook important variations within a group. This tendency is evident in most of the popular, and some of the academic, conversations regarding "gender differences." The book *Men Are from Mars and Women Are from Venus* makes it seem like men and women aren't even species that hail from the same planet. The media is quick to include a blurb from a research study indicating again how men and women are "wired" to communicate differently. However, the overwhelming majority of current research on gender and communication finds that while there are differences between how men and women communicate, there are far more similarities (Allen, 2011). Even the language we use to describe the genders sets up dichotomies. That's why I suggest that my students use the term *other gender* instead of the commonly used *opposite sex*. I have a mom, a sister, and plenty of female friends, and I don't feel like any of them are the opposite of me. Perhaps a better title for a book would be *Women and Men Are Both from Earth*.

The static-dynamic dialectic suggests that culture and communication change over time yet often appear to be and are experienced as stable. Although it is true that our cultural beliefs and practices are rooted in the past, we have already discussed how cultural categories that most of us assume to be stable, like race and gender, have changed dramatically in just the past fifty years. Some cultural values remain relatively consistent over time, which allows us to make some generalizations about a culture. For example, cultures have different orientations to time. The Chinese have a longer-term orientation to time than do Europeans (Lustig & Koester, 2006). This is evidenced in something that dates back as far as astrology. The Chinese zodiac is done annually (The Year of the Monkey, etc.), while European astrology was organized by month (Taurus, etc.). While this cultural orientation to time has been around for generations, as China becomes more Westernized in terms of technology, business, and commerce, it could also adopt some views on time that are more short term.

The history/past-present/future dialectic reminds us to understand that while current cultural conditions are important and that our actions now will inevitably affect our future, those conditions are not without a history. We always view history through the lens of the present. Perhaps no example is more entrenched in our past and avoided in our present as the history of slavery in the United States.

Figure 6.2: There has been controversy over whether the Confederate flag is a symbol of hatred or a historical symbol that acknowledges the time of the Civil War. Jim Surkamp – [Confederate Rebel Flag](#) – CC BY-NC 2.0.

I remember an instance in a history class where we were discussing slavery and the subject of repatriation, or compensation for descendants of slaves, came up. A white male student in the class proclaimed, "I've never owned slaves. Why should I have to care about this now?" While his statement about not owning slaves is valid, it doesn't acknowledge that effects of slavery still linger today and that the repercussions of such a long and unjust period of our history don't disappear over the course of a few generations.

The privileges-disadvantages dialectic captures the complex interrelation of unearned, systemic advantages and disadvantages that operate among our various identities. As was discussed earlier, our society consists of dominant and nondominant groups. Our cultures and identities have certain privileges and/or disadvantages. To understand this dialectic, we must view culture and identity through a lens of intersectionality, which asks us to acknowledge that we each have multiple cultures and identities that intersect with each other. Because our identities are complex, no one is completely privileged and no one is completely disadvantaged. For example, while we may think of a white, heterosexual male as being very privileged, he may also have a disability that leaves him without the able-bodied privilege that a Latina woman has. This is often a difficult dialectic for my students to understand, because they are quick to point out exceptions that they think challenge this notion. For example, many people like to point out Oprah

Winfrey as a powerful African American woman. While she is definitely now quite privileged despite her disadvantaged identities, her trajectory isn't the norm. When we view privilege and disadvantage at the cultural level, we cannot let individual exceptions distract from the systemic and institutionalized ways in which some people in our society are disadvantaged while others are privileged.

As these dialectics reiterate, culture and communication are complex systems that intersect with and diverge from many contexts. A better understanding of all these dialectics helps us be more critical thinkers and competent communicators in a changing world.

Think About It . . . "Getting Critical" - Immigration, Laws, and Religion

France, like the United States, has a constitutional separation between church and state. As many countries in Europe, including France, Belgium, Germany, the Netherlands, and Sweden, have experienced influxes of immigrants, many of them Muslim, there have been growing tensions among immigration, laws, and religion. In 2011, France passed a law banning the wearing of a *niqab* (pronounced *knee-cobb*), which is an Islamic facial covering worn by some women that only exposes the eyes. This law was aimed at "assimilating its Muslim population" of more than five million people and "defending French values and women's rights" (De La Baume & Goodman, 2011). Women found wearing the veil can now be cited and fined \$150 euros. Although the law went into effect in April of 2011, the first fines were issued in late September of 2011. Hind Ahmas, a woman who was fined, says she welcomes the punishment because she wants to challenge the law in the European Court of Human Rights. She also stated that she respects French laws but cannot abide by this one. Her choice to wear the veil has been met with more than a fine. She recounts how she has been denied access to banks and other public buildings and was verbally harassed by a woman on the street and then punched in the face by the woman's husband. Another Muslim woman named Kenza Drider, who can be seen in Video Clip 8.2, announced that she will run for the presidency of France in order to challenge the law. The bill that contained the law was broadly supported by politicians and the public in France, and similar laws are already in place in Belgium and are being proposed in Italy, Austria, the Netherlands, and Switzerland (Fraser, 2011).

1. Some people who support the law argue that part of integrating into Western society is showing your face. Do you agree or disagree? Why?
2. Part of the argument for the law is to aid in the assimilation of Muslim immigrants into French society. What are some positives and negatives of this type of assimilation?
3. Identify which of the previously discussed dialectics can be seen in this case. How do these dialectics capture the tensions involved?

Think About It . . . Veiled Woman Eyes French Presidency

Watch this news clip that covers a French presidential hopeful in 2011. Would you be inclined to vote for this person? Why or why not?

Intercultural Communication and Relationships

Intercultural relationships are formed between people with different cultural identities and include friends, romantic partners, family, and coworkers. Intercultural relationships have benefits and drawbacks. Some of the benefits include increasing cultural knowledge, challenging previously held stereotypes, and learning new skills (Martin & Nakayama, 2010). For example, I learned about the Vietnamese New Year celebration Tet from a friend I made in graduate school. This same friend also taught me how to make some delicious Vietnamese foods that I continue to cook today. I likely would not have gained this cultural knowledge or skill without the benefits of my intercultural friendship. Intercultural relationships also present challenges, however.

The dialectics discussed earlier affect our intercultural relationships. The similarities-differences dialectic in particular may present challenges to relationship formation (Martin & Nakayama, 2010). While differences between people's cultural identities may be obvious, it takes some effort to uncover commonalities that can form the basis of a relationship. Perceived differences in general also create anxiety and uncertainty that is not as present in intracultural relationships. Once some similarities are found, the tension within the dialectic begins to balance out and uncertainty and anxiety lessen. Negative stereotypes may also hinder progress toward relational development, especially if the individuals are not open to adjusting their preexisting beliefs. Intercultural relationships may also take more work to nurture and maintain. The benefit of increased cultural awareness is often achieved, because the

relational partners explain their cultures to each other. This type of explaining requires time, effort, and patience and may be an extra burden that some are not willing to carry. Last, engaging in intercultural relationships can lead to questioning or even backlash from one's own group. I experienced this type of backlash from my white classmates in middle school who teased me for hanging out with the African American kids on my bus. While these challenges range from mild inconveniences to more serious repercussions, they are important to be aware of. As noted earlier, intercultural relationships can take many forms. The focus of this section is on friendships and romantic relationships, but much of the following discussion can be extended to other relationship types.

Friendships

Even within the United States, views of friendship vary based on cultural identities. Research on friendship has shown that Latinos/as value relational support and positive feedback, Asian Americans emphasize exchanges of ideas like offering feedback or asking for guidance, African Americans value respect and mutual acceptance, and European Americans value recognition of each other as individuals (Collier, 1996). Despite the differences in emphasis, research also shows that the overall definition of a close friend is similar across cultures. A close friend is thought of as someone who is helpful and nonjudgmental, who you enjoy spending time with but can also be independent, and who shares similar interests and personality traits (Lee, 2006).

Intercultural friendship formation may face challenges that other friendships do not. Prior intercultural experience and overcoming language barriers increase the likelihood of intercultural friendship formation (Sias et al., 2008). In some cases, previous intercultural experience, like studying abroad in college or living in a diverse place, may motivate someone to pursue intercultural friendships once they are no longer in that context. When friendships cross nationality, it may be necessary to invest more time in common understanding, due to language barriers. With sufficient motivation and language skills, communication exchanges through self-disclosure can then further relational formation. Research has shown that individuals from different countries in intercultural friendships differ in terms of the topics and depth of self-disclosure, but that as the friendship progresses, self-disclosure increases in depth and breadth (Chen & Nakazawa, 2009). Further, as people overcome initial challenges to initiating an intercultural friendship and move toward mutual self-disclosure, the relationship becomes more intimate, which helps friends work through and move beyond their cultural differences to focus on maintaining their relationship. In this sense, intercultural friendships can be just as strong and enduring as other friendships (Lee, 2006).

The potential for broadening one's perspective and learning more about cultural identities is not always balanced, however. In some instances, members of a dominant culture may be more interested in sharing their culture with their intercultural friend than they are in learning about their friend's culture, which illustrates how context and power influence friendships (Lee, 2006). A research study found a similar power dynamic, as European Americans in intercultural friendships stated they were open to exploring everyone's culture but also communicated that culture wasn't a big part of their intercultural friendships, as they just saw their friends as people. As the researcher states, "These types of responses may demonstrate that it is easiest for the group with the most socioeconomic and socio-cultural power to ignore the rules, assume they have the power as individuals to change the rules, or assume that no rules exist, since others are adapting to them rather than vice versa" (Collier, 1996). Again, intercultural friendships illustrate the complexity of culture and the importance of remaining mindful of your communication and the contexts in which it occurs.

Romantic Relationships

Romantic relationships are influenced by society and culture, and still today some people face discrimination based on who they love. Specifically, sexual orientation and race affect societal views of romantic relationships. Although the United States, as a whole, is becoming more accepting of gay and lesbian relationships, there is still a climate of prejudice and discrimination that individuals in same-gender romantic relationships must face. Despite some physical and virtual meeting places for gay and lesbian people, there are challenges for meeting and starting romantic relationships that are not experienced for most heterosexual people (Peplau & Spalding, 2000).

As we've already discussed, romantic relationships are likely to begin due to merely being exposed to another person at work, through a friend, and so on. But some gay and lesbian people may feel pressured into or just feel more comfortable not disclosing or displaying their sexual orientation at work or perhaps even to some family and friends, which closes off important social networks through which most romantic relationships begin. This pressure to refrain from disclosing one's gay or lesbian sexual orientation in the workplace is not unfounded, as it is still legal in twenty-nine states (as of November 2012) to fire someone for being gay or lesbian (Human Rights Campaign, 2012). There are also some challenges faced by gay and lesbian partners regarding relationship termination. Gay and lesbian couples do not have the same legal and societal resources to manage their relationships as heterosexual couples; for example, gay and lesbian relationships are not legally recognized in most states, it is more difficult for a

gay or lesbian couple to jointly own property or share custody of children than heterosexual couples, and there is little public funding for relationship counseling or couples therapy for gay and lesbian couples.

While this lack of barriers may make it easier for gay and lesbian partners to break out of an unhappy or unhealthy relationship, it could also lead couples to termination who may have been helped by the sociological support systems available to heterosexuals (Peplau & Spalding, 2000).

Despite these challenges, relationships between gay and lesbian people are similar in other ways to those between heterosexuals. Gay, lesbian, and heterosexual people seek similar qualities in a potential mate, and once relationships are established, all these groups experience similar degrees of relational satisfaction (Peplau & Spalding, 2000). Despite the myth that one person plays the man and one plays the woman in a relationship, gay and lesbian partners do not have set preferences in terms of gender role. In fact, research shows that while women in heterosexual relationships tend to do more of the housework, gay and lesbian couples were more likely to divide tasks so that each person has an equal share of responsibility (Peplau & Spalding, 2000). A gay or lesbian couple doesn't necessarily constitute an intercultural relationship, but as we have already discussed, sexuality is an important part of an individual's identity and connects to larger social and cultural systems. Keeping in mind that identity and culture are complex, we can see that gay and lesbian relationships can also be intercultural if the partners are of different racial or ethnic backgrounds.

While interracial relationships have occurred throughout history, there have been more historical taboos in the United States regarding relationships between African Americans and white people than other racial groups. Anti-miscegenation laws were common in states and made it illegal for people of different racial/ethnic groups to marry. It wasn't until 1967 that the Supreme Court ruled in the case of *Loving versus Virginia*, declaring these laws to be unconstitutional (Pratt, 1995). It wasn't until 1998 and 2000, however, that South Carolina and Alabama removed such language from their state constitutions (Lovingday.org, 2011). The organization and website lovingday.org commemorates the landmark case and works to end racial prejudice through education.

Even after these changes, there were more Asian-white and Latino/a-white relationships than there were African American–white relationships (Gaines Jr. & Brennan, 2011). Having already discussed the importance of similarity in attraction to mates, it's important to note that partners in an interracial relationship, although culturally different, tend to be similar in occupation and income. This can likely be explained by the situational influences on our relationship formation we discussed earlier—namely, that work tends to be a starting ground for many of our relationships, and we usually work with people who have similar backgrounds to us.

There has been much research on interracial couples that counters the popular notion that partners may be less satisfied in their relationships due to cultural differences. In fact, relational satisfaction isn't significantly different for interracial partners, although the challenges they may face in finding acceptance from other people could lead to stressors that are not as strong for intracultural partners (Gaines Jr. & Brennan, 2011). Although partners in interracial relationships certainly face challenges, there are positives. For example, some mention that they've experienced personal growth by learning about their partner's cultural background, which helps them gain alternative perspectives. Specifically, white people in interracial relationships have cited an awareness of and empathy for racism that still exists, which they may not have been aware of before (Gaines Jr. & Liu, 2000).

1.7: Intercultural Communication Competence

Learning Objectives

1. Define intercultural communication competence.
2. Explain how motivation, self- and other-knowledge, and tolerance for uncertainty relate to intercultural communication competence.
3. Summarize the three ways to cultivate intercultural communication competence that are discussed.
4. Apply the concept of “thinking under the influence” as a reflective skill for building intercultural communication competence.

Throughout this book we have been putting various tools in our communication toolbox to improve our communication competence. Many of these tools can be translated into intercultural contexts. While building any form of competence requires effort, building intercultural communication competence often requires us to take more risks. Some of these risks require us to leave our comfort zones and adapt to new and uncertain situations. In this section, we will learn some of the skills needed to be an interculturally competent communicator. Before we do, it is important to understand the United States has a blending of cultural groups. We use metaphors to understand the cultural mix of the United States. Common metaphors we use are the melting pot, a set of tributaries, a tapestry, and a garden salad. [i]

Metaphors[ii]

The Melting Pot Metaphor- "is a metaphor for a heterogeneous society becoming more homogeneous, the different elements "melting together" into a harmonious whole with a common culture. It is particularly used to describe the assimilation of immigrants to the United States; the melting-together metaphor was in use by the 1780s."

Figure 1.7.1: The American Melting Pot. [Source](#).

The Tributaries Metaphor

"A currently popular metaphor for describing the mix of cultures in the United States is that of tributaries or tributary streams. America, according to this image, is like a huge cultural watershed, providing numerous paths in which the many tributary cultures can flow. The tributaries maintain their unique identities as they surge toward their common destination."

The Tapestry Metaphor

A tapestry is a decorative cloth made up of many strands of thread. The threads are woven together into an artistic design that may be pleasing to some but not to others. Each thread is akin to a person, and groups of similar threads are analogous to a culture. Of course, the types of threads differ in many ways; their thickness, smoothness, color, texture, and strength may vary.

The Garden Salad Metaphor

Like a garden salad made up of many distinct ingredients that are being tossed continuously, some see the United States as made up of a complex array of distinct cultures that are blended into a unique, and one hopes tasteful, mixture.

These metaphors help us understand what happens as individuals and their cultures assimilate into the national culture. Before this assimilation occurs, individuals will most likely experience culture shock.[iii]

Culture Shock

Culture shock is “a sense of confusion and uncertainty sometimes with feelings of anxiety that may affect people exposed to an alien culture or environment without adequate preparation” (Merriam-Webster Dictionary).

Anthropologist Kalervo Oberg provided an early explanation of the term at a presentation to the Women’s Club of Rio de Janeiro, Brazil on August 3, 1954.

Culture shock is precipitated by the anxiety that results from losing all our familiar signs and symbols of social intercourse. These signs or cues include the thousand and one ways in which we orient ourselves to the situations of daily life: when to shake hands and what to say when we meet people, when and how to give tips, how to give orders to servants, how to make purchases, when to accept and when to refuse invitations, when to take statements seriously and when not. Now these cues which may be words, gestures, facial expressions, customs, or norms are acquired by all of us in the course of growing up and are as much a part of our culture as the language we speak or the beliefs we accept. All of us depend for our peace of mind and our efficiency on hundreds of these cues, most of which we do not carry on the level of conscious awareness.[iv]

Stages of Culture Shock[v]

1. The Honeymoon Stage

The first stage of culture shock is often overwhelmingly positive and individuals become infatuated with the culture and all of its differences from the person’s original culture; including language, people, food , social practices, etc. Individuals may find they just want to stay in the culture “forever.”

2. The Frustration Stage

At this stage, individuals feel tired of not being able to understanding the verbal and nonverbal communication and miscommunication can happen frequently.

3. The Adjustment Stage

Frustrations begin to decrease as individuals become more familiar with the culture (beliefs, values, norms, social practices). There may even be beginning feelings of slight assimilation into the culture.

4. The Acceptance Stage

In this final stage, individual understand the new culture a little better and are feeling more comfortable in the communication interactions. To feel more at ease in the new culture, individuals may make an effort to begin the adaptation process.

Adaptation

Acculturation is the process by which immigrant people adjust and adapt their way of life to the host culture. Once in the U.S., they realize that they have to make some adjustments in order to experience success in their daily interactions with members of the mainstream society.

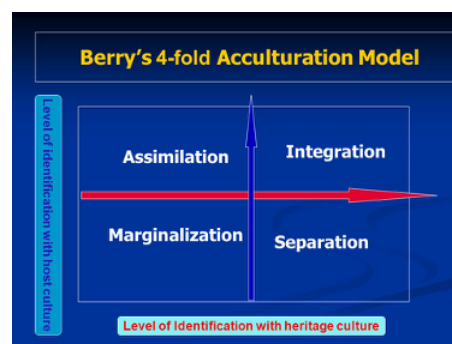

Figure 1.7.2: 4-Fold Acculturation Model.

Assimilation is the process by which people from different cultures are acculturated and ultimately absorbed into the mainstream culture. In much of the U.S. history of immigration throughout the 18th, 19th, and early 20th Centuries, assimilation was more or less forced toward the deeply British-influenced mainstream culture systems.

Cultural *integration* is a form of cultural exchange in which one group assumes the beliefs, practices and rituals of another group without sacrificing the characteristics of its own culture. While cultural syncretism carries a negative connotation, cultural

integration is generally looked upon as positive because nothing is lost. Seen from this light, cultural integration is a healthy intermingling of the beliefs and rituals of two unique cultures.[vi]

Separation occurs when individuals reject the dominant or host culture in favor of preserving their culture of origin. Separation is often facilitated by immigration to ethnic enclaves.

Many adult immigrants hold dear their homeland cultures and adapt as little as possible to mainstream U.S. cultural norms, which commonly leads to marginalization. *Marginalization* is the tendency for adult immigrants to be rendered powerless in comparison to native-born adults because they live as half citizens not fully capable of realizing the individual opportunities often found available to average native-born adults. Their U.S. born children find themselves living in a culturally transitioning family structure. Their parents are more like permanent tourists here while they become fully Americanized (for better or for worse), because public schools are tremendous socialization agencies which effectively acculturate most children into the mainstream. These children often serve as cultural liaisons to their parents and the mainstream culture. Regardless of which culture.[vii]

During this acculturation process we are often times face dilemmas.

Ethical Dilemmas[viii]

An issue many people face when interacting and communicating with another culture is whether they should change their behaviors to fit the host culture's belief, values, norms and social practices. The question arises on whether the people of the host culture should adjunct their behaviors or is it the responsibility of the visitor?

"When in Rome, do as the Romans do." This old saying places the responsibility on the visitor. Respecting differences in verbal and nonverbal communication means the visitor must take the responsibility to research about the host culture and follow the host culture. Do you think people should engage in behaviors they find morally or ethically wrong? Is it possible people could lose their own sense of self? Could making these adaptation possibly offend the host culture?

1. Another ethical issue confronting the visitor is whether it is acceptable to judge the host culture's behaviors due to a vast difference in beliefs, values, norms and social practices. Are there values that go beyond cultural differences?

Components of Intercultural Communication Competence

Competent communication is interaction that is perceived as effective in fulfilling certain rewarding objectives in a way that is also appropriate to the context in which the interaction occurs.

Intercultural competence is **contextual**. An impression or judgment that a person is intercultural competent is made with respect to both a specific relational context and a particular situational context. Competence is not independent of the relationships and situations within which communication occurs.

- **Knowledge** refers to the cognitive information you need to have about the people, the context, and the norms of appropriateness that operate in a specific culture.
- **Motivations** include the overall set of emotional associations that people have as they anticipate and actually communicate interculturally.
- **Feelings** refer to the emotional or effective state that you experience when communicating with someone from a different culture.
- **Intentions** are what guide your choices in a particular intercultural interaction. Your intentions are the goals, plans, objectives, and desires that focus and direct your behavior.
- **Actions** refer to the actual performance of those behaviors that are regarded as appropriate and effective.
- **Respect** is shown through both verbal and nonverbal symbols.

BASIC dimensions of intercultural competence.

- **Orientation to Knowledge** - The terms people use to explain themselves and the world around them.
- **Empathy** - The capacity to behave as though you understand the world as others do.
- **Interaction Management** - Skill in regulating conversations.
- **Task Role Behavior** - Behaviors that involve the initiation of ideas related to group problem-solving activities.
- **Relational Role Behavior** - Behaviors associated with interpersonal harmony and mediation.

- **Tolerance for Ambiguity Interaction Posture** - The ability to react to new and ambiguous situations with little visible discomfort.
- **Display of Respect** - The ability to show respect and positive regard for another person.
- **Interaction Posture** - The ability to respond to others in descriptive.

Intercultural communication competence (ICC) is the ability to communicate effectively and appropriately in various cultural contexts. There are numerous components of ICC. Some key components include motivation, self- and other knowledge, and tolerance for uncertainty.

Initially, a person's motivation for communicating with people from other cultures must be considered. *Motivation* refers to the root of a person's desire to foster intercultural relationships and can be intrinsic or extrinsic (Martin & Nakayama, 2010). Put simply, if a person isn't motivated to communicate with people from different cultures, then the components of ICC discussed next don't really matter. If a person has a healthy curiosity that drives him or her toward intercultural encounters in order to learn more about self and others, then there is a foundation from which to build additional competence-relevant attitudes and skills. This intrinsic motivation makes intercultural communication a voluntary, rewarding, and lifelong learning process. Motivation can also be extrinsic, meaning that the desire for intercultural communication is driven by an outside reward like money, power, or recognition. While both types of motivation can contribute to ICC, context may further enhance or impede a person's motivation to communicate across cultures.

Members of dominant groups are often less motivated, intrinsically and extrinsically, toward intercultural communication than members of nondominant groups, because they don't see the incentives for doing so. Having more power in communication encounters can create an unbalanced situation where the individual from the nondominant group is expected to exhibit competence, or the ability to adapt to the communication behaviors and attitudes of the other. Even in situations where extrinsic rewards like securing an overseas business investment are at stake, it is likely that the foreign investor is much more accustomed to adapting to United States business customs and communication than vice versa. This expectation that others will adapt to our communication can be unconscious, but later ICC skills we will learn will help bring it to awareness.

The unbalanced situation just described is a daily reality for many individuals with nondominant identities. Their motivation toward intercultural communication may be driven by survival in terms of functioning effectively in dominant contexts. This is a form of code-switching in which individuals from nondominant groups adapt their communication to fit in with the dominant group. In such instances, African Americans may "talk white" by conforming to what is called "standard English," women in corporate environments may adapt masculine communication patterns, people who are gay or lesbian may self-censor and avoid discussing their same-gender partners with coworkers, and people with nonvisible disabilities may not disclose them in order to avoid judgment.

While intrinsic motivation captures an idealistic view of intercultural communication as rewarding in its own right, many contexts create extrinsic motivation. In either case, there is a risk that an individual's motivation can still lead to incompetent communication. For example, it would be exploitative for an extrinsically motivated person to pursue intercultural communication solely for an external reward and then abandon the intercultural relationship once the reward is attained. These situations highlight the relational aspect of ICC, meaning that the motivation of all parties should be considered. Motivation alone cannot create ICC.

Knowledge supplements motivation and is an important part of building ICC. Knowledge includes self- and other-awareness, mindfulness, and cognitive flexibility. Building knowledge of our own cultures, identities, and communication patterns takes more than passive experience (Martin & Nakayama). Developing cultural self-awareness often requires us to get out of our comfort zones. Listening to people who are different from us is a key component of developing self-knowledge. This may be uncomfortable, because we may realize that people think of our identities differently than we thought.. They perceived US Americans to be shallow because they were friendly and exciting while they were in Sweden but didn't remain friends once they left. The most effective way to develop other-knowledge is by direct and thoughtful encounters with other cultures. However, people may not readily have these opportunities for a variety of reasons. Despite the overall diversity in the United States, many people still only interact with people who are similar to them. Even in a racially diverse educational setting, for example, people often group off with people of their own race. While a heterosexual person may have a gay or lesbian friend or relative, they likely spend most of their time with other heterosexuals. Unless you interact with people with disabilities as part of your job or have a person with a disability in your friend or family group, you likely spend most of your time interacting with able-bodied people. Living in a rural area may limit your ability to interact with a range of cultures, and most people do not travel internationally regularly. Because of this, we may have to make a determined effort to interact with other cultures or rely on educational sources

like college classes, books, or documentaries. Learning another language is also a good way to learn about a culture, because you can then read the news or watch movies in the native language, which can offer insights that are lost in translation. It is important to note though that we must evaluate the credibility of the source of our knowledge, whether it is a book, person, or other source. Also, knowledge of another language does not automatically equate to ICC.

Developing self- and other-knowledge is an ongoing process that will continue to adapt and grow as we encounter new experiences. Mindfulness and cognitive complexity will help as we continue to build our ICC (Pusch, 2009). Mindfulness is a state of self- and other-monitoring that informs later reflection on communication interactions. As mindful communicators we should ask questions that focus on the interactive process like “How is our communication going? What are my reactions? What are their reactions?” Being able to adapt our communication in the moment based on our answers to these questions is a skill that comes with a high level of ICC. Reflecting on the communication encounter later to see what can be learned is also a way to build ICC. We should then be able to incorporate what we learned into our communication frameworks, which requires cognitive flexibility. Cognitive flexibility refers to the ability to continually supplement and revise existing knowledge to create new categories rather than forcing new knowledge into old categories. Cognitive flexibility helps prevent our knowledge from becoming stale and also prevents the formation of stereotypes and can help us avoid prejudging an encounter or jumping to conclusions. In summary, to be better intercultural communicators, we should know much about others and ourselves and be able to reflect on and adapt our knowledge as we gain new experiences.

Motivation and knowledge can inform us as we gain new experiences, but how we feel in the moment of intercultural encounters is also important. Tolerance for uncertainty refers to an individual’s attitude about and level of comfort in uncertain situations (Martin & Nakayama, 2010). Some people perform better in uncertain situations than others, and intercultural encounters often bring up uncertainty. Whether communicating with someone of a different gender, race, or nationality, we are often wondering what we should or shouldn’t do or say. Situations of uncertainty most often become clearer as they progress, but the anxiety that an individual with a low tolerance for uncertainty feels may lead them to leave the situation or otherwise communicate in a less competent manner. Individuals with a high tolerance for uncertainty may exhibit more patience, waiting on new information to become available or seeking out information, which may then increase the understanding of the situation and lead to a more successful outcome (Pusch, 2009). Individuals who are intrinsically motivated toward intercultural communication may have a higher tolerance for uncertainty, in that their curiosity leads them to engage with others who are different because they find the self- and other-knowledge gained rewarding.

Cultivating Intercultural Communication Competence

How can ICC be built and achieved? This is a key question we will address in this section. Two main ways to build ICC are through experiential learning and reflective practices (Bednarz, 2010). We must first realize that competence isn’t any one thing. Part of being competent means that you can assess new situations and adapt your existing knowledge to the new contexts. What it means to be competent will vary depending on your physical location, your role (personal, professional, etc.), and your life stage, among other things. Sometimes we will know or be able to figure out what is expected of us in a given situation, but sometimes we may need to act in unexpected ways to meet the needs of a situation. Competence enables us to better cope with the unexpected, adapt to the nonroutine, and connect to uncommon frameworks. I have always told my students that ICC is less about a list of rules and more about a box of tools.

Three ways to cultivate ICC are to foster attitudes that motivate us, discover knowledge that informs us, and develop skills that enable us (Bennett, 2009). To foster attitudes that motivate us, we must develop a sense of wonder about culture. This sense of wonder can lead to feeling overwhelmed, humbled, or awed (Opdal, 2001). This sense of wonder may correlate to a high tolerance for uncertainty, which can help us turn potentially frustrating experiences we have into teachable moments.

Discovering knowledge that informs us is another step that can build on our motivation. One tool involves learning more about our cognitive style, or how we learn. Our cognitive style consists of our preferred patterns for “gathering information, constructing meaning, and organizing and applying knowledge” (Bennett, 2009). As we explore cognitive styles, we discover that there are differences in how people attend to and perceive the world, explain events, organize the world, and use rules of logic (Nisbett, 2003). Some cultures have a cognitive style that focuses more on tasks, analytic and objective thinking, details and precision, inner direction, and independence, while others focus on relationships and people over tasks and things, concrete and metaphorical thinking, and a group consciousness and harmony.

Developing ICC is a complex learning process. At the basic level of learning, we accumulate knowledge and assimilate it into our existing frameworks. But accumulated knowledge doesn’t necessarily help us in situations where we have to apply that knowledge. Transformative learning takes place at the highest levels and occurs when we encounter situations that challenge our accumulated

knowledge and our ability to accommodate that knowledge to manage a real-world situation. The cognitive dissonance that results in these situations is often uncomfortable and can lead to a hesitance to repeat such an engagement. One tip for cultivating ICC that can help manage these challenges is to find a community of like-minded people who are also motivated to develop ICC. In my graduate program, I lived in the international dormitory in order to experience the cultural diversity that I had enjoyed so much studying abroad a few years earlier. I was surrounded by international students and US American students who were more or less interested in cultural diversity. This ended up being a tremendous learning experience, and I worked on research about identity and communication between international and American students.

Developing skills that enable us is another part of ICC. Some of the skills important to ICC are the ability to empathize, accumulate cultural information, listen, resolve conflict, and manage anxiety (Bennett, 2009). Again, you are already developing a foundation for these skills by reading this book, but you can expand those skills to intercultural settings with the motivation and knowledge already described. Contact alone does not increase intercultural skills; there must be more deliberate measures taken to fully capitalize on those encounters. While research now shows that intercultural contact does decrease prejudices, this is not enough to become interculturally competent. The ability to empathize and manage anxiety enhances prejudice reduction, and these two skills have been shown to enhance the overall impact of intercultural contact even more than acquiring cultural knowledge. There is intercultural training available for people who are interested. If you can't access training, you may choose to research intercultural training on your own, as there are many books, articles, and manuals written on the subject.

Reflective practices can also help us process through rewards and challenges associated with developing ICC. As we open ourselves to new experiences, we are likely to have both positive and negative reactions. It can be very useful to take note of negative or defensive reactions you have. This can help you identify certain triggers that may create barriers to effective intercultural interaction. Noting positive experiences can also help you identify triggers for learning that you could seek out or recreate to enhance the positive (Bednarz, 2010). A more complex method of reflection is called intersectional reflexivity. Intersectional reflexivity is a reflective practice by which we acknowledge intersecting identities, both privileged and disadvantaged, and implicate ourselves in social hierarchies and inequalities (Jones Jr., 2010). This method brings in the concepts of dominant and nondominant groups and the privileges/disadvantages dialectic we discussed earlier.

While formal intercultural experiences like studying abroad or volunteering for the Special Olympics or a shelter for gay, lesbian, bisexual, transgender, and queer (GLBTQ) youth can result in learning, informal experiences are also important. We may be less likely to include informal experiences in our reflection if we don't see them as legitimate. Reflection should also include "critical incidents" or what I call "a-ha! moments." Think of reflection as a tool for metacompetence that can be useful in bringing the formal and informal together (Bednarz, 2010).

Think About It . . . "Getting Competent" - Thinking under the Influence

Communication and culture scholar Brenda Allen coined the phrase "thinking under the influence" (TUI) to highlight a reflective process that can help us hone our intercultural communication competence (Allen, 2011). As we discussed earlier, being mindful is an important part of building competence. Once we can become aware of our thought processes and behaviors, we can more effectively monitor and intervene in them. She asks us to monitor our thoughts and feelings about other people, both similar to and different from us. As we monitor, we should try to identify instances when we are guilty of TUI, such as uncritically accepting the dominant belief systems, relying on stereotypes, or prejudging someone based on their identities. She recounts seeing a picture on the front of the newspaper with three men who appeared Latino. She found herself wondering what they had done, and then found out from the caption that they were the relatives of people who died in a car crash. She identified that as a TUI moment and asked herself if she would have had the same thought if they had been black, white, Asian, or female. When we feel "surprised" by someone different, this often points to a preexisting negative assumption that we can unpack and learn from. Allen also found herself surprised when a panelist at a conference who used a wheelchair and was hearing impaired made witty comments. Upon reflection, she realized that she had an assumption that people with disabilities would have a gloomy outlook on life. While these examples focus on out-groups, she also notes that it's important for people, especially in nondominant groups, to monitor their thoughts about their own group, as they may have internalized negative attitudes about their group from the dominant culture. As a black woman, she notes that she has been critical of black people who "do not speak mainstream English" based on stereotypes she internalized about race, language, and intelligence. It is not automatically a bad thing to TUI. Even Brenda Allen, an accomplished and admirable scholar of culture and communication, catches herself doing it. When we notice that we TUI, it's important to reflect on that moment and try to adjust our thinking processes.

This is an ongoing process, but it is an easy-to-remember way to cultivate your ICC. Keep a record of instances where you catch yourself “thinking under the influence” and answer the following questions:

1. What triggers you to TUI?
2. Where did these influences on your thought come from?
3. What concepts from this chapter can you apply to change your thought processes?

Key Takeaways

- Getting integrated: Intercultural communication competence (ICC) is the ability to communicate effectively and appropriately in various cultural contexts. ICC also has the potential to benefit you in academic, professional, personal, and civic contexts.
- A person with appropriate intrinsic or extrinsic motivation to engage in intercultural communication can develop self- and other-knowledge that will contribute to their ability to be mindful of their own communication and tolerate uncertain situations.
- We can cultivate ICC by fostering attitudes that motivate us, discovering knowledge that informs us, and developing skills that enable us.

Exercises

1. Identify an intercultural encounter in which you did not communicate as competently as you would have liked. What concept(s) from the chapter would have helped you in this situation and how?
2. Which of the following components of ICC—motivation, mindfulness, cognitive flexibility, and tolerance for uncertainty—do you think you are most competent at, and which one needs the most work? Identify how you became so competent at the first one and some ways that you can improve the second one.
3. Choose one of the three ways discussed to cultivate ICC and make a list of five steps you can take to enhance this part of your competence.

1.8: Striving for Engaged and Effective Intercultural Communication

Learning Objectives

1. Define intercultural communication competence.

By this point in the semester, you have many intercultural concepts and theories to help you be a better communicator. With all activities, it takes practice to be a more competent communicator. In this final chapter, we will leave you with a few suggestions on how you can improve your communication skills with individuals from other cultures.

Richard Wiseman from California State University has discovered some features of effective intercultural communication that you can use to improve. He has studied intercultural communicators for many years and provides a crisp review of what it means to be good at communicating across cultures in his chapter on intercultural communication competence. Wiseman's basic recipe is fairly simple. You have intercultural communication competence if you can communicate effectively and appropriately in intercultural situations. It's a key aspect of cultural competence. The key lies in understanding what it means to be effective and what it means to be appropriate.

Your intercultural communication is effective when it allows you to achieve a goal that you care about. This is the first part of intercultural communication competence. Wiseman describes the components of effective intercultural communication strategies. Based on this description, these are 5 steps you can use to increase how effective you are in intercultural interactions:

1. Think about what your goals are for an interaction before you engage the other person. Your goal may be to find out if you can trust the other person, or it may just be to get invited to a party. 1 / 3 Global Cognition

2. Think about what you need to do to achieve your goals. If you're trying to find out if you can trust someone, one way might be to ask them a question you already know the answer to. If you want to get invited to a party, you might say "I heard there's this special drink people have at parties around here. It sounds fantastic. I'd love to experience that before I go home."

Try to predict what the other person's responses will be to things you might say or do. This is where knowing the culture comes in handy so as to accurately take their perspective. If you ask a question that is considered very personal where the other person comes from in your quest to figure out if you can trust them, you could inadvertently lose their trust. And, it's possible that by showing that you know and appreciate something about another culture's customs you will inspire people to invite you to a party.

Pick a communication approach and try it out. This is the part where you have to 'pull it off', so to speak. If you've come up with a communication approach that you're not sure you can pull off, then you may want to try to generate some alternatives. Other people know when you're being genuine and when you aren't. In that regard it doesn't matter what culture they come from.

Reflect back on how effective your approach was after the interaction. This means thinking of each interaction you have as a learning experience. If it didn't go as you expected, you may want to try to figure out why. This can help you come up with a better approach next time. Appropriate Intercultural Communication But, achieving a goal you care about is not enough. According to Wiseman, intercultural communication competence also means you must communicate appropriately. Intercultural communication is appropriate when you achieve your goals through the use of messages and actions that are expected in the situation. This means that the actions and communication you use to achieve your goal are interpreted as meaningful by the other person you're interacting with. To make that happen, Wiseman contends, you need a trifecta of knowledge, skills, and motivation. Knowledge, as mentioned earlier in this chapter. You must have information about the people, the rules for communication used within their culture, the context, and the expectations members of the other culture have for interactions. Skills – You must be able to engage in a different style of communication than you're used to. You have to be motivated to interact with people who are different than you. This means being able to let go of any misgivings or negative emotions you may have towards them.

We encourage all of you to engage in a lifelong commitment to competent intercultural communication. Use the knowledge and information gained throughout this course to help you be better communicators. Afterall, our world can use more effective intercultural communication.[i]

"Take advantage of every opportunity to practice your communication skills so that when important occasions arise, you will have the gift, the style, the sharpness, the clarity, and the emotions to affect other people."~**Jim Rohn**
