

3.7: Chapter Formula Review

3.1 Terminology

A and B are events

$P(S) = 1$ where S is the sample space

$$0 \leq P(A) \leq 1$$

$$P(A|B) = \frac{P(A \cap B)}{P(B)}$$

3.2 Independent and Mutually Exclusive Events

If A and B are independent, $P(A \cap B) = P(A)P(B)$, $P(A|B) = P(A)$ and $P(B|A) = P(B)$

If A and B are mutually exclusive, $P(A \cup B) = P(A) + P(B)$ and $P(A \cap B) = 0$

3.3 Two Basic Rules of Probability

The multiplication rule: $P(A \cap B) = P(A|B)P(B)$

The addition rule: $P(A \cup B) = P(A) + P(B) - P(A \cap B)$
