

## 12.9: Regression - Textbook Cost (Worksheet)

Name: \_\_\_\_\_

Section: \_\_\_\_\_

Student ID#: \_\_\_\_\_

*Work in groups on these problems. You should try to answer the questions without referring to your textbook. If you get stuck, try asking another group for help.*

### Student Learning Outcomes

- The student will calculate and construct the line of best fit between two variables.
- The student will evaluate the relationship between two variables to determine if that relationship is significant.

### Collect the Data

Survey ten textbooks. Collect bivariate data (number of pages in a textbook, the cost of the textbook).

a. Complete the table.

Number of pages	Cost of textbook

- b. Which variable should be the dependent variable and which should be the independent variable? Why?
- c. Graph “pages” vs. “cost.” Plot the points on the graph in [Analyze the Data](#). Label both axes with words. Scale both axes.

### Analyze the Data

Enter your data into your calculator or computer. Write the linear equation, rounding to four decimal places.

a. Calculate the following:

i.  $a =$  \_\_\_\_\_

ii.  $b =$  \_\_\_\_\_

iii. correlation = \_\_\_\_\_

iv.  $n =$  \_\_\_\_\_

v. equation:  $\hat{y} =$  \_\_\_\_\_

vi. Is the correlation significant? Why or why not? (Answer in complete sentences.)

b. Supply an answer for the following scenarios:

i. For a textbook with 400 pages, predict the cost.

ii. For a textbook with 600 pages, predict the cost.

c. Obtain the graph on your calculator or computer. Sketch the regression line.

Figure 12.9.1.

### Discussion Questions

- a. Answer each question in complete sentences.
  - i. Does the line seem to fit the data? Why?
  - ii. What does the correlation imply about the relationship between the number of pages and the cost?
- b. Are there any outliers? If so, which point(s) is an outlier?
- c. Should the outlier, if it exists, be removed? Why or why not?
